Preface	ix
1 INTRODUCTION	1
1.1 Introduction	1
1.1.1 Hierarchies, micro and macro levels	1
1.1.2 Multilevel models	2
1.2 Examples	3
1.2.1 Income of workers in industry	3
1.2.2 Drug prevention research	4
1.2.3 School effectiveness research	4
1.2.4 Clinical therapy	5
1.2.5 Growth curve analysis	6
1.2.6 Geographical information systems	7
1.2.7 Meta-analysis	7
1.2.8 Twin and family studies	7
1.3 Summarizing discussion and definitions	8
1.3.1 Contextual models	8
1.3.2 Intra-class correlation	9
1.3.3 Fixed versus random coefficients	10
1.3.4 Cross-level interactions	12
1.3.5 Prediction	13
1.3.6 Shrinkage estimation and borrowing strength	14
1.4 Brief history	15
1.4.1 Variance components	15
1.4.2 Random coefficients	15
1.4.3 Variable coefficients	16
1.4.4 Changing coefficients	16
1.4.5 Panel data	16
1.4.6 Growth curves and repeated measurements	16
1.4.7 Bayesian linear models and empirical Bayes estimation	17
1.4.8 Moderator variables	17
1.4.9 Slopes as outcomes	17
1.5 Further reading	18
1.6 Software	18
1.6.1 HLM	19
1.6.2 VARCL	19
1.6.3 BMDP5-V	20

1.6.4	MLn	20
1.6.5	PROC MIXED	20
1.6.6	MIXOR and MIXREG	20
1.7	Summary	21
	Note	21
2	OVERVIEW OF CONTEXTUAL MODELS	22
2.1	Introduction	22
2.2	Models	22
2.3	Data	23
2.4	Decomposition of variation	25
2.5	Total or pooled regression	26
2.6	Aggregate regression	27
2.7	The contextual model	28
2.8	The Cronbach model	29
2.9	Analysis of covariance	30
2.10	MLn analysis of contextual models	32
2.11	Summary	34
	Notes	34
3	VARYING AND RANDOM COEFFICIENT MODELS	35
3.1	Introduction	35
3.2	Separate regressions	35
3.3	Varying coefficients or 'slopes as outcomes'	36
3.4	The random coefficient model	39
3.5	Assumptions of linear models	44
3.6	'Slopes-as-outcomes' analysis	45
3.7	Random coefficient results	47
3.7.1	Adding a macro-level explanatory variable	48
3.7.2	Posterior means	51
3.8	ANCOVA as alternative	53
3.9	The number of parameters	54
3.10	Summary	55
	Notes	56

4	ANALYSES	57
4.1	Introduction	57
4.1.1	Data description	58
4.1.2	The organization of the four sessions	61
4.2	Session 1	63
4.2.1	Notation for models	63
4.2.2	The null model	63
4.2.3	'HomeWork' and 'MathAchievement'	65
4.2.4	Random slope for 'HomeWork'	66
4.2.5	Adding 'ParentEducation'	69
4.2.6	Traditional regression analysis	70
4.3	Session 2	71
4.3.1	Introduction	71
4.3.2	A model with 'SchoolSize'	73
4.3.3	Changing 'SchoolSize' to 'Public'	74
4.3.4	Adding a cross-level interaction with 'Public'	75
4.3.5	Analyses with NELS-88	79
4.3.6	Deleting 'HomePublic' and adding 'White' using the small data set again	80
4.3.7	Adding a random part for 'White'	82
4.3.8	Making the coefficient of 'White' fixed and adding 'MeanSES'	84
4.3.9	Deleting the school characteristic 'Public'	85
4.3.10	Adding an interaction between 'HomeWork' and 'MeanSES'	87
4.3.11	Adding another student-level variable	88
4.3.12	Analyses with NELS-88	89
4.4	Session 3	90
4.4.1	'SES' as a student-level explanatory variable	90
4.4.2	Adding a random slope	91
4.4.3	Adding 'PercentMinorities'	93
4.4.4	Adding 'MeanSES'	94
4.4.5	Analyses with NELS-88, models 2 and 3	96
4.5	Session 4	98
4.5.1	Analysis with class size and a cross-level interaction	98
4.5.2	Interaction between 'Ratio' and 'HomeWork'	99
4.5.3	Repeating the modeling session with NELS-88	101
4.6	Discussion	102
	Notes	103
5	FREQUENTLY ASKED QUESTIONS	105
5.1	Introduction	105
5.2	The effects of centering	106
5.2.1	Centering in fixed effects regression models	106
5.2.2	Centering in multilevel models	107

5.2.3	Grand mean centering	108
5.2.4	Group mean centering	109
5.2.5	An example	110
5.2.6	Cross-level interactions with 'Public' and 'SES'	112
5.3	Modeled variance	<b>115</b>
5.3.1	Random intercept models	116
5.3.2	Using the null model as a way to calculate $R^2$	117
5.3.3	Using total between variance	118
5.3.4	Conclusions	119
5.4	Power	<b>119</b>
5.4.1	Some simple cases	121
5.4.2	Review of simulation studies	124
5.4.3	Conclusions	126
5.5	To be or not to be random	<b>126</b>
5.5.1	ANCOVA versus RANCOVA versus simple regression	127
5.5.2	Fixed versus random slopes	129
5.6	Estimation techniques and algorithms	<b>130</b>
5.6.1	Which is best, FIML or REML?	133
5.6.2	The effect of estimation methods on the fixed coefficients	133
5.6.3	Estimation methods for variance components	134
5.6.4	Conclusions	135
5.7	Multicollinearity	<b>135</b>
	Notes	<b>137</b>
Appendix	Coding of NELS-88 Data	<b>139</b>
References		<b>142</b>
Index		<b>147</b>
