
CONTENTS

PART ONE

EXPERIMENTAL DESIGN AND PRELIMINARY DATA ANALYSIS **I**

Chapter 1

Introduction to Experimental Design **3**

- 1.1 Getting Started 4
- 1.2 How Do Psychologists Conduct Research? 6
- 1.3 Experimental Research Design 15
- 1.4 Summary 26
- 1.5 Exercises 27

Chapter 2

Preliminary Data Analysis **29**

- 2.1 The Mean as a Measure of Central Tendency 30
- 2.2 The Variance as a Measure of Variability 35
- 2.3 Additional Descriptive Techniques 43
- 2.4 Summary 50
- 2.5 Exercises 50

PART TWO

THE ANALYSIS OF SINGLE-FACTOR EXPERIMENTS **53**

Chapter 3

The Logic of Hypothesis Testing **55**

- 3.1 Neutralizing Nuisance Variables Through Randomization 56
- 3.2 Index of the Treatment Effects 63
- 3.3 Hypothesis Testing 69
- 3.4 Summary 74
- 3.5 Exercises 75

Chapter 4
Calculating the F Ratio 79

4.1	Design and Notation	80
4.2	Partitioning the Total Sum of Squares	83
4.3	Sums of Squares: Computational Formulas	90
4.4	The Analysis of Variance	96
4.5	Summary	102
4.6	Exercises	102

Chapter 5
Evaluating the F Ratio 107

5.1	The Sampling Distribution of F	108
5.2	Determining the Critical Value of F	112
5.3	Forming the Decision Rule	113
5.4	Assumptions Underlying the Analysis	118
5.5	A Complete Numerical Example	121
5.6	Special Analysis with Two Treatment Conditions	128
5.7	Summary	132
5.8	Exercises	132
5.9	Appendix: An Explanation of the Correction for Unequal Variances	134

Chapter 6
Analytical Comparisons in the Single-Factor Design 139

6.1	The Nature of Analytical Comparisons	140
6.2	An Example of the Relationship Between Research Hypotheses and Analytical Comparisons	141
6.3	Analyzing Differences Between Pairs of Means	146
6.4	More Complex Analytical Comparisons	151
6.5	Summary	160
6.6	Exercises	161
6.7	Appendix: Using the t Test to Analyze Single- df Comparisons	164

Chapter 7	
Estimating Population Means and Effect Size	169
7.1 Interval Estimation in Experiments	169
7.2 The Magnitude of Treatment Effects	177
7.3 Summary	185
7.4 Exercises	186
Chapter 8	
Errors of Hypothesis Testing and Statistical Power	187
8.1 Statistical Errors in Hypothesis Testing	188
8.2 Cumulative Type I Error	197
8.3 Using Power to Estimate Sample Size	209
8.4 Summary	216
8.5 Exercises	217
8.6 Appendix: An Alternative Method for Estimating Sample Size	220
PART THREE	
THE ANALYSIS OF FACTORIAL DESIGNS	225
Chapter 9	
Introduction to the Analysis of Factorial Experiments	227
9.1 The Factorial Experiment	228
9.2 Main Effects and Interaction	235
9.3 Identifying Basic Deviations	245
9.4 The Analysis of Variance	251
9.5 Calculating Sums of Squares	255
9.6 A Numerical Example	259
9.7 Summary	270
9.8 Exercises	271
Chapter 10	
Analytical Comparisons in the Factorial Design	277
10.1 Interpreting F Tests in the Factorial Design	278
10.2 The Detailed Analysis of Main Effects	282

10.3 Analyzing Simple Effects	286
10.4 Analyzing Simple Comparisons	296
10.5 An Overall Plan of Analysis	299
10.6 Summary	301
10.7 Exercises	302
10.8 Appendix: Analyzing Interaction Contrasts	305

PART FOUR

THE ANALYSIS OF WITHIN-SUBJECTS DESIGNS 313

Chapter 11

The Single-Factor Within-Subjects Design 315

11.1 Reducing Error Variance	317
11.2 Logic of the Analysis of Within-Subjects Designs	321
11.3 Computational Formulas for the Analysis of Variance	327
11.4 A Numerical Example	332
11.5 Analytical Comparisons	337
11.6 Planning Within-Subjects Designs	340
11.7 Summary	348
11.8 Exercises	349
11.9 Appendix: Using Separate Error Terms to Evaluate Analytical Comparisons	352

Chapter 12

The Mixed Within-Subjects Factorial Design 359

12.1 A Comparison of Factorial Designs	360
12.2 The Logic of the Analysis	364
12.3 Analysis of Variance	371
12.4 A Numerical Example	376
12.5 Analytical Comparisons	383
12.6 Summary	394
12.7 Exercises	395

Chapter 13

The Two-Factor Within-Subjects Design

399

13.1 The Logic of the Analysis	401
13.2 The Analysis of Variance	406
13.3 A Numerical Example	409
13.4 Analytical Comparisons	418
13.5 Summary	424
13.6 Exercises	425

PART FIVE

ADDITIONAL STATISTICAL PROCEDURES

429

Chapter 14

The Analysis of Categorical Data

431

14.1 Analyzing Completely Randomized Single-Factor Designs	432
14.2 Conducting Analytical Comparisons	439
14.3 Effect Size and Power	444
14.4 Summary	451
14.5 Exercises	452
14.6 Appendix: Analyzing Completely Randomized Factorial Designs	453

Chapter 15

Correlation and Regression

457

15.1 Characteristics of Correlational Research	459
15.2 Linear Correlation	464
15.3 Linear Regression	472
15.4 Interpreting a Correlation Coefficient	480
15.5 Using Power to Estimate Sample Size	486
15.6 A Reprise: Causation and Correlation	487
15.7 Summary	489
15.8 Exercises	490
15.9 Appendix: A Variance Interpretation of Linear Correlation	492

Chapter 16	
Additional Topics	501
16.1 Nonexperimental Research	502
16.2 Using the Computer	510
16.3 Areas of Further Study	522
Appendices	527
Appendix A: Statistical Tables	529
Table A-1 Table of Random Numbers	529
Table A-2 Critical Values of the <i>F</i> Distribution	531
Table A-3 Critical Values of the <i>t</i> Distribution	534
Table A-4 Critical Values of the Studentized Range Statistic	535
Table A-5 Critical Values of the Dunnett Test	537
Table A-6 Power Functions for the Analysis of Variance	538
Table A-7 Critical Values of the Chi Square (χ^2) Distribution	539
Table A-8 Power Functions for the Chi Square Statistic	540
Table A-9 Critical Values of the Product-Moment Correlation Coefficient (<i>r</i>)	541
Table A-10 Power Function for the Product-Moment Correlation Coefficient (<i>r</i>)	542
Table A-11 Linear and Quadratic Coefficients for Trend Analysis	543
Appendix B: Answers to Selected Chapter Exercises	545
Appendix C: Using Statistical Calculators	571
Appendix D: Trend Analysis	585
 Glossary: Significant Terms and Concepts	 597
References	613
Author Index	617
Subject Index	619
