About this Book	xi
1. Introduction to the Study of Behavioral Science	1
1.1 Objective Research into the Subjective Realm	1
1.1.1 Acceptable Science	2
1.1.2 Evaluation of Research	2
1.2 Psychological Laws of Nature	3
1.2.1 Laws of Nature as an Interplay of Magnitudes	4
1.2.2 Measurement of Magnitudes	4
1.2.3 Separation of Theory and Observation	6
1.2.4 Formalized Theory	7
1.2.5 Psychological Laws	8
1.3 Quantitative Psychology	9
1.3.1 Finding Quantitative Laws of Behavior	10
1.3.2 Meaningfulness	11
1.3.3 The Distinction between Numerals and Numbers	12
1.3.4 Measurement: Counting Units Versus Solving Sets of Inequalities	13
1.4 Historical Remarks	15
1.5 Summary	15
1.6 Study Questions	15
2. The Foundations of Quantitative Theory	17
2.1 Formalized Theory	17
2.1.1 Predicate Calculus as a Formal Theory	18
2.1.2 Rules of Inference	20
2.2 The Subject Matter of Experimental Psychology	20
2.2.1 The Concept of Semantic Inference	21
2.2.2 Observations of Behavior as Binary Relations	21
2.3 Some Recurring Experimental Paradigms in Psychology	22
2.3.1 Detection	23

2.3.2	Pair Comparison	23
2.3.3	Method of Adjustment	23
2.3.4	Intermodal Comparison	24
2.3.5	Method of Bisection	24
2.3.6	Partition of Sets	24
2.3.7	Relational Systems	24
2.3.8	Ordering as an Experimental Paradigm	26
2.3.9	Examples	27
2.3.10	Categorizing as an Experimental Paradigm	29
2.4	Numbers in Science	30
2.4.1	Ordinal Numbers and Cardinal Numbers	30
2.4.2	Counting Set Elements	31
2.4.3	The Additive Structure of the Results of Counting	32
2.4.4	Additive Structure	33
2.5	Historical Remarks	33
2.6	Summary	33
2.7	Study Questions	34
3.	Order of Preference	37
3.1	Meaningful Theory	37
3.1.1	Interpretation of Structure	37
3.1.2	The Motive for Experimentation	39
3.1.3	Numbers as the Range of the Map for Empirical Order of Preference	40
3.2	Ordinal Scaling Based on Preference for One in a Pair	41
3.2.1	The Representation Theorem	42
3.2.2	Proof of the Representation Theorem	43
3.2.3	The Uniqueness Theorem	44
3.2.4	The Proof of the Uniqueness Theorem	45
3.3	Historical Remarks	46
3.4	Summary	47
3.5	Study Questions	47
4.	The Intensity of Sensation	49
4.1	The Goal of Research	49
4.1.1	Linearity	50
4.1.2	Group Structure	51
4.1.3	Empirical Applicability of Group Structure	52
4.2	The Field of Real Numbers	53
4.3	Hölder's Theorem	54
4.4	Positive Regular Semi-Group Structure	58
4.5	Historical Remarks	61
4.6	Summary	62

4.7	Study Questions	62
5.	Complex Stimulation	65
5.1	Additive Conjoint Measurement	65
5.2	Probabilistic Extensive Scaling	74
5.3	Historical Remarks	77
5.4	Summary	78
5.5	Study Questions	78
6.	Perceptual Space	79
6.1	Color Science	79
6.1.1	Independent Variables, the Physical Stimulus	79
6.1.2	Anatomy of the Eye	82
6.2	Scaling of Brightness	82
6.2.1	What is a Stimulus?	82
6.2.2	Photometrics: The Scaling of Light	84
6.2.3	Psychological Scaling	86
6.2.4	The Dynamics of Brightness Perception	88
6.3	Scaling of Color	90
6.3.1	Color Space	90
6.3.2	Colors as Visual Equivalence Classes of Stimulus Spectra	92
6.4	Adaptation to Color	106
6.5	Higher Color Metrics	115
6.5.1	The Line Element	116
6.5.2	Uniform Color Spaces (UCS)	117
6.5.3	Metric Invariance in Color Space	119
6.5.4	Color Contrast	122
6.5.5	Color Blindness	124
6.6	Historical Remarks	125
6.7	Summary	127
6.8	Study Questions	128
	References	129
	List of Symbols	135
	Index	139
