Preface	vii
1 Introduction	1
<b>Part I</b>	
2 Logic of decision making in statistics	6
3 Evaluating alternatives to the null hypothesis	24
4 Types of statistical test	59
5 Varieties of experimental design	72
<b>Part II</b>	
6 Computational procedure	90
7 Two independent samples	108
8 Two related samples	141
9 Three or more independent samples	183
10 Three or more related samples	218
11 Correlation and concordance	271
12 Multiple and <i>post hoc</i> hypothesis testing	288
13 Factorial designs	299
<b>Part III</b>	
14 Mathematical considerations	346
15 Computer program	384
Appendix Critical value tables	408
References	444
Index	447
