	Numbers and People	7
	Measurement Scales	8
	<i>Nominal scale</i>	9
	<i>Ordinal scale</i>	9
	<i>Interval scale</i>	11
	<i>Ratio scale</i>	12
	Psychological Measurements on Interval and Ratio Scales	12
	<i>Choosing a measurement scale</i>	13
	Observations and Experiments	14
	Observing Correlations	14

<i>Correlation and causality</i>	15
The Experimental Method	15
<i>Causal inferences</i>	16
<i>Independent and dependent variables</i>	16
Some Final Words	17
Terms and Symbols	17
Exercises and Study Questions	18

2 Frequency Distributions: Graphical Methods 21

Groups	22
Samples and Populations	22
<i>Descriptive and inferential statistics</i>	22
Displaying Frequency Distributions	23
Role of the Measurement Scale	23
Nominal Scales	23
<i>Bar graphs</i>	23
<i>Pie charts</i>	24
A Digression: Why Study Statistics?	25
Back to Graphical Methods: Drawing Some Conclusions	26
Ordinal Scales	28
Interval and Ratio Scales	28
<i>Histograms</i>	29
<i>Frequency polygons</i>	30
<i>Class intervals</i>	32
<i>A stem-and-leaf display</i>	34
Some Distinctive Features of Frequency Distributions	35
Comparisons between Groups	37
Terms and Symbols	37
Exercises and Study Questions	38

3 Measures of Central Location 41

The Principal Measures	42
The Mean	42
<i>Rounding</i>	43
<i>Summation operations</i>	44
The Median	46
Comparing the Mean and Median	52
<i>Skewed distributions</i>	53

<i>Some physical analogies</i>	54
The Mode	54
<i>Bimodality and types of people</i>	55
The Role of the Measurement Scale	55
Terms and Symbols	56
Exercises and Study Questions	57

4 Measures of Dispersion 61

The Nature of Dispersion	62
The Range	62
The Average Deviation	63
The Standard Deviation	64
<i>Computational formulas</i>	65
<i>Using a calculator</i>	66
<i>Representing the standard deviation graphically</i>	67
The Variance	68
Summation Operations	69
Variables and Constants	69
<i>Transformed scores</i>	69
<i>Summation of a variable: ΣX</i>	69
<i>Summation of two variables: $\Sigma(X + Y)$</i>	70
<i>Summation of a variable plus a constant: $\Sigma(X + c)$</i>	70
<i>Summation of a constant times a variable: ΣcX</i>	71
Equivalence of Conceptual and Computational Formulas	71
Computers and Statistics	72
Some Results of Transforming Scores	72
Adding a Constant	73
Multiplying by a Constant	74
Terms and Symbols	75
Exercises and Study Questions	75

5 The Individual and the Group 79

A Preview	80
Percentile Ranks	81
Transforming Ranks to Percentiles	82
<i>Tied ranks</i>	83
Transforming Scores Directly to Percentiles	84
<i>Finding the score at a given percentile</i>	86

Some Percentiles of Special Interest	87
<i>The 50th percentile</i>	87
<i>The 25th and 75th percentiles</i>	88
The Normal Distribution	88
The Area Under a Curve	91
<i>Percentiles of some selected scores</i>	91
The Equation of the Normal Distribution	92
The Standard Normal Distribution	93
<i>Transforming a distribution to Z-scores</i>	95
<i>Percentiles from Z-scores</i>	95
<i>Z-scores in a sample</i>	97
A Forward Look	99
Terms and Symbols	99
Exercises and Study Questions	100

6 Random Variables and Probability Experiments 103

Probability Experiments	104
Events and Sample Spaces	105
<i>Probability</i>	106
<i>Multiple trials</i>	106
<i>Random variables and compound events</i>	108
<i>The size of a sample space</i>	109
Some Properties of Probabilities	110
<i>Probability of an impossible event</i>	110
<i>Probability of an absolutely certain event</i>	111
<i>Summing probabilities</i>	111
<i>Two important properties</i>	111
Expected Value of a Random Variable	111
Variance of a Random Variable	113
Set Theory and Conditional Probability	114
Independent and Nonindependent Events	114
<i>Prior and posterior probability</i>	117
<i>Joint occurrence of independent events</i>	118
<i>The gambler's fallacy</i>	118
Probabilities of Intersects and Unions	119
<i>Operations with several sets</i>	120
<i>Intersection and independence</i>	121
Some Conditional Probabilities in the Real World	122
Permutations and Combinations	123
An Experiment Involving Permutations	126
<i>Testing the null hypothesis</i>	127
An Experiment Involving Combinations	128

Some Problems in Designing and Running Experiments	129
Confounding	129
Procedural Flaws	130
Epilog	131
Terms and Symbols	131
Exercises and Study Questions	132

7 Probability Distributions and Hypothesis Testing 135

The Binomial Distribution	136
The Binomial Probability Experiment	136
<i>A binomial example</i>	137
Testing the Null Hypothesis	140
<i>The idea of a critical value</i>	142
1-tailed tests	143
2-tailed tests	144
The Effects of Sample Size	146
Expected Value and Variance of the Binomial Random Variable X	147
The Normal Approximation to the Binomial	149
Probability and the Area under a Curve	149
<i>Comparing the binomial and the normal distribution</i>	150
<i>The correction for continuity</i>	152
Large Binomial Samples	153
<i>A 2-tailed test</i>	153
<i>Significance probability</i>	155
<i>A 1-tailed test</i>	155
Some Restrictions on the Normal Approximation	156
Some Final Words	156
Terms and Symbols	157
Exercises and Study Questions	157

8 Testing a Single Mean 163

Samples and Populations	164
Statistics and Parameters	164
Sampling a Population Where μ and σ Are Known	165
The Sampling Distribution	165
Critical Ratios	166
Expected Value of the Sample Mean	167
Variance of the Sampling Distribution	168

The Central Limit Theorem	169
The Z test for a Single Mean	172
<i>The Z test and percentiles</i>	173
<i>Requirements for the Z test</i>	175
Sampling a Population Where σ Is Unknown	175
Estimating the Population Variance and Standard Deviation	176
The <i>t</i> distribution	178
<i>Degrees of freedom</i>	179
<i>Some characteristics of the t curve</i>	180
<i>Calculating the t statistic</i>	181
<i>Comparing t and the standard normal distribution</i>	184
Requirements for Z and t Tests, One-Sample Case	184
Errors in Hypothesis Testing	186
Power of a Test	188
Confidence Intervals for the Mean	189
Confidence Intervals Where σ Is Known	189
Confidence Intervals Where σ Is Unknown	191
Confidence Intervals and Hypothesis Testing	192
Terms and Symbols	194
Exercises and Study Questions	195

9 Comparing Two Independent Groups 199

Interval and Ratio Scales	200
Differences Between Means Where σ Is Known	200
<i>The Z test of a difference between means</i>	201
<i>Expected value of a difference between sample means</i>	201
<i>Standard deviation of a difference between sample means</i>	202
<i>Calculating Z for independent samples</i>	203
<i>Requirements for the Z test</i>	204
Differences Between Means Where σ Is Unknown	205
<i>The t test of a difference between means</i>	206
<i>Equal sample sizes</i>	208
<i>Calculating the t statistic</i>	209
<i>Requirements for the t Test</i>	211
Ordinal Scales	213
The Mann-Whitney <i>U</i> Test	213
Logic of the <i>U</i> Test	213
<i>The null and alternative hypotheses</i>	214
<i>The two U statistics</i>	214
<i>Calculating the U statistics</i>	215
<i>The distribution of U</i>	216

<i>Critical values of U</i>	219
<i>One- and two-tailed tests</i>	222
<i>Tied ranks</i>	222
<i>The U test for large samples</i>	223
<i>Requirements for the U test</i>	224
<i>Comparing the U test and the t test</i>	224
Nominal Scales	224
<i>The Binomial Test of a Difference between Independent Proportions</i>	225
<i>The null hypothesis</i>	226
<i>Requirements for the Z test of binomial proportions</i>	228
Choosing a test	230
Terms and Symbols	231
Exercises and Study Questions	231

10 Correlation and Regression: Ratio and Interval Scales 237

Correlation	238
<i>The Pearson r</i>	240
<i>The possible values of r</i>	240
<i>Computational formula for r</i>	243
Regression	245
<i>Estimating Y from X</i>	246
<i>Error deviation</i>	247
<i>The least-squares criterion</i>	247
<i>Estimating X from Y</i>	248
<i>Proportion of Variance Accounted for</i>	251
<i>Error variance and explained variance</i>	251
<i>Explanation and causality</i>	252
<i>Partitioning the total variance of Y</i>	252
<i>Proportion of explained variance</i>	255
<i>The Sample Standard Error of Estimate</i>	256
<i>The bivariate normal distribution</i>	258
<i>Estimation errors and the individual</i>	260
Some Inferential Statistics	261
<i>Testing the Significance of r</i>	261
<i>Assessing Reliability and Validity</i>	263
<i>A subtle problem: the effect of a truncated range</i>	264
<i>Predicting the Future</i>	265
<i>The population regression line</i>	266
<i>Standard errors of estimate</i>	268
<i>Confidence bond for the population regression line</i>	272
<i>Confidence limits for an individual future Y value</i>	274

Some Final Words	275
Terms and Symbols	276
Exercises and Study Questions	277

11 Measures of Association: Ordinal and Nominal Scales 281

Ordinal Scales	282
Spearman's Rank-Order Correlation Coefficient, r_s	282
<i>Relationship between r and r_s</i>	284
<i>The significance of r_s</i>	284
<i>Tied ranks</i>	286
Nominal Scales	287
The ϕ Coefficient	289
<i>The values of ϕ</i>	290
<i>The statistical significance of ϕ</i>	291
<i>Requirements for ϕ</i>	291
A Mixed Case: A Dichotomy and an Interval or Ratio Scale	292
<i>The point-biserial correlation coefficient, r_{pb}</i>	292
<i>The statistical significance of r_{pb}</i>	295
<i>Requirements for r_{pb}</i>	295
The Chi-Square Test of Association in a 2 by 2 Table	296
<i>Observed and expected frequencies</i>	296
<i>Degrees of freedom and critical values</i>	299
<i>Hypothesis testing</i>	299
<i>Relationships between χ^2, Z, and ϕ</i>	300
Chi-Square Tests of Association in Larger Contingency Tables	303
<i>The nature of an association in a contingency table</i>	305
<i>Requirements for Chi-Square Tests of Association</i>	306
Choosing a measure of Association	308
Some Final Words	309
Terms and Symbols	309
Exercises and Study Questions	310

12 Comparing Two Correlated Measures: Repeated-Measures and Matched-Pairs Designs 313

Interval and Ratio Scales	315
The t Test for Correlated Measures	315
<i>Repeated-measures test</i>	315
<i>Comparing correlated-measures and independent t tests</i>	320

<i>Some difficulties in the repeated-measures design</i>	321
<i>Matched-pairs test</i>	322
<i>A memory experiment</i>	323
Requirements for Correlated-Measures <i>t</i> Tests	327
Ordinal Scales	328
The Sign Test	328
<i>A repeated-measures design</i>	328
<i>The sign test for matched pairs</i>	330
<i>Requirements for the sign test</i>	330
<i>A difficulty with the sign test</i>	331
The Wilcoxon Signed-Ranks Test	332
<i>Rationale for the test</i>	333
<i>The signed-ranks test in large samples</i>	334
<i>Requirements for the signed-ranks test</i>	334
Nominal Scales	335
A Test of Correlated Proportions	335
<i>Other uses of the test</i>	338
<i>Requirements for the test of correlated proportions</i>	338
A Forward Look	338
Terms and Symbols	339
Exercises and Study Questions	339

13 Designing Experiments and Observations 343

An Overview	344
Statistics and Experimental Design	344
Choosing Research Problems and Strategies	345
<i>Observation or experimentation?</i>	345
Sampling Considerations	346
<i>Random samples</i>	346
<i>Convenience samples</i>	346
<i>Sampling bias</i>	347
<i>Sample size and the size of an effect</i>	348
The Number of Levels of an Independent Variable	349
The Number of Independent Variables	349
Reliability and Validity of an Experiment	350
<i>Internal and external validity</i>	350
<i>Reliability and significance</i>	350
Correlational Studies	351
Multiple and Partial Correlation	351
Time Series	352

<i>Interrupted time series</i>	352	
Factor Analysis	353	
Single-Group Designs	353	
Case Studies	353	
<i>Common weaknesses</i>	354	
Before-After Design	354	
<i>Weaknesses</i>	354	
The $N = 1$ Design	354	
<i>Counterbalancing</i>	355	
<i>Strengths and weaknesses of the $N = 1$ design</i>	359	
Repeated Measures on a Group	359	
Two-Group Designs	360	
Natural and Manipulated Independent Variables	360	
<i>Statistical tests</i>	360	
True Experiments: Manipulated Independent Variables	361	
<i>Independent groups</i>	361	
<i>Balancing and randomizing</i>	362	
<i>Matched-pairs design</i>	364	
<i>Strengths and weaknesses of true experiments</i>	365	
Quasi-Experiments	365	
Systematic Observations: Natural Independent Variables	366	
<i>Strengths and weaknesses</i>	367	
Multiple Groups: Single-Factor Designs	367	
True Experiments	368	
<i>Independent randomized groups</i>	368	
<i>Matched groups and repeated measures</i>	369	
Quasi-Experiments and Systematic Observations	370	
Factorial Designs	370	
Main Effects	371	
Interactions	372	
In Conclusion	373	
Terms and Symbols	373	
Exercises and Study Questions	374	

14 Multiple Independent Groups 377

Analysis of Variance: Interval and Ratio Scales	378
The Effects of the Independent Variable	379
<i>The null and alternative hypotheses</i>	380
Variance within and between Groups	382
<i>Comparing the variance between and within</i>	385

<i>The F ratio</i>	386	
Sums of Squares and Mean Squares		388
<i>Partitioning the total sum of squares</i>	388	
<i>Expected value of the mean square within</i>		391
<i>Expected value of the mean square between</i>		392
<i>Computational formulas</i>	394	
Unequal Sample Sizes		395
Requirements for the Independent-Groups ANOVA		397
Repeated Measures		398
Factorial Designs		399
Testing Differences Between Means		399
<i>A Priori Tests</i>	400	
<i>A Posteriori Tests</i>	402	
<i>The Newman-Keuls procedure</i>		403
<i>Rationale for the tests</i>	405	
Unequal ns		406
<i>Comparing a priori and a posteriori tests</i>		406
The Size of an Effect		407
Other Multiple Comparisons		408
<i>Trend analysis</i>	408	
<i>Testing combinations of means</i>		408
Nominal and Ordinal Scales		410
The Kruskal-Wallis Analysis of Variance by Ranks		410
One-Variable Chi-Square Tests: Frequencies and Proportions		410
Some Final Words		410
Terms and Symbols		411
Exercises and Study Questions		411

15 **Frequencies and Proportions in Multiple Categories** **415**

The One-Variable Chi-Square Test		416
<i>Equal Expected Frequencies</i>	417	
<i>Null and alternative hypotheses</i>	417	
<i>Relationship between χ^2 and Z</i>	418	
<i>Requirements</i>	419	
Unequal Expected Frequencies		420
<i>Requirements</i>	422	
Interpreting a One-Variable Chi-Square Test		423
Chi-Square Tests of Homogeneity of Proportions		423
Binomial Proportions		424
<i>Tests of proportions and association between variables</i>		425

Multinomial Proportions	426
Observations and Experiments	428
Requirements	428
Some Closing Words	428
Terms and Symbols	429
Exercises and Study Questions	429

Appendixes

A	Review of Basic Mathematics	433
	Algebraic Operations	434
	Addition	434
	Multiplication	434
	The Square of a Binomial	435
	Division	436
	Operations Involving Different Signs	436
	Collection of Terms	437
	Fractions	438
	Addition	438
	Multiplication	439
	Division	440
	Squares and Square Roots	441
	Multiplication under a Radical	442
	Addition under a Radical	442
	Placing a Multiplier under a Radical	442
	Exponents	442
	Multiplication	442
	Division	443
	Zero as an Exponent	443
	Negative Exponents	444
	Factoring	444
	Equations	445
	Addition	445
	Multiplication and Division	445
	Squaring and Taking Square Roots	446
	Solving Equations	446
	Inequalities	447
	Addition and Subtraction	448
	Multiplication	448
	Division by Zero	449

B Estimating the Population Variance 451

Expected Value of the Sample Variance 452

Correcting the Sample Variance 454

C Some Derivations in Correlation and Regression 457

Fitting Least-Squares Regression Lines 458

Predicting Y from X 458

Predicting X from Y 461

Partitioning the Total Variance 461

Deriving the ϕ Coefficient 463

Answers to Exercises 467

Statistical Tables 553
