

CONTENTS

EXTRUSION DIVISION

A Fundamental Study of Polymer Melt Devolatilization	2
Joseph A. Biesenberger and Shau-Tarnng Lee, <i>Polymer Processing Institute, Stevens Institute of Technology</i>	
The Mechanism of Foam Devolatilization in Partially Filled Screw Devolatilizers	8
Hso-Pan Han and Chang Dae Han, <i>Polytechnic Institute of New York</i>	
Extrusion Isolation of Polymers from Solution	12
Russell J. Nichols and Paul E. Lubiejewski, <i>Welding Engineers, Inc.</i>	
A Rotating Drum Devolatilizer	17
Michael Kearney and Peter Hold, <i>Farrel Company</i>	
Gear Pump Characteristics and Application	23
William A. Kramer, <i>Crompton & Knowles Corporation</i>	
Throughput-Pressure Relationships for Power Law Fluids in Single Screw Extruders	30
Chris Rauwendaal, <i>Raychem Corporation</i>	
Hicap Extrusion Technology for Black Jacketing Compounds	34
B. K. Hwang, A. Kharazi, and A. Nicholas, <i>Union Carbide Corporation</i>	
Extrusion of Saran Resins	38
K. S. Hyun, W. A. Trumbull, and S. R. Jenkins, <i>The Dow Chemical Company</i>	
C. I. Chung, <i>Rensselaer Polytechnic Institute</i>	
Determination of the Residence Time Distribution in a Plasticating Extruder Using an Ionomer Tracer	42
H. J. Stamato and R. A. Weiss, <i>University of Connecticut</i>	
Mixing Studies in Co-Rotating Twin Screw Extruders	45
David Bigio and Lewis Erwin, <i>Massachusetts Institute of Technology</i>	
Predicting Component Concentration Fluctuations in Extruded Polymer Composites	49
Stephen T. Balke, <i>Xerox Research Centre of Canada</i>	
Dynamic Behavior of a Single Screw Plasticating Extruder	54
R. W. Nelson and L. James Lee, <i>The Ohio State University</i>	
Analysis of Barrier Type Extruder Screws	59
Chris Rauwendaal, <i>Raychem Corporation</i>	
On the Melting of a Compressed Polymer Bed in an Annular Cell	65
Costas Gogos, Mustapha Abbaoui, Batara Sianturi, and Jisheng Shen, <i>Stevens Institute of Technology</i>	
Solids Conveying Friction Factors from Extruder Flow Data	69
Stephen J. Derezinski, <i>Eastman Kodak Company</i>	
The Mathematical Model of Solid Conveying Zone in Single Screw Extruder	73
Yucheng Peng, Jianhua Cheng, and Yuanjian Wu, <i>South China Institute of Technology</i>	
Melt Temperature Measurement in a Single Screw Extruder	76
Chibao Miaw, Alex Hasson, and Gary Balch, <i>General Electric Co.</i>	
The Influence of Processing Conditions on the Optical and Mechanical Properties of Extruded and Biaxially Stretched PP Films	80
Jörg Nordmeier and Georg Menges, <i>Institut für Kunststoffverarbeitung</i>	
Deformational and Temperature History Comparison for LLDPE and LDPE Elements in the Bubble Expansion Region of Blown Films	84
T. A. Huang and G. A. Campbell, <i>Mobil Chemical Company</i>	
Causes of Edge Beads in Flat Cast Films	89
Thomas Dobroth and Professor Lewis Erwin, <i>Massachusetts Institute of Technology</i>	
Countercurrent Cooling of Blown Film	93
K. F. Strater and J. M. Dealy, <i>McGill University</i>	

The Recycling of Low Density Poly(ethylene) Film	96
J. H. Sayago and S. P. Petrie, <i>University of Lowell</i>	
Recycle of Saran-Containing Scrap in Multilayer Coextrusion	100
K. Z. Hong, <i>The Dow Chemical Company</i>	
New Process for the Reduction of Draw Resonance in Melt Embossing and Extrusion Coating	104
E. H. Roberts, P. J. Lucchesi, and S. J. Kurtz, <i>Union Carbide Corporation</i>	
The Extruder—A High Speed, Low Shear, Energy Efficient Extruder	108
James F. Machen, <i>The University of Toledo</i>	
John D. Schuster, <i>Autotec, Inc.</i>	
A Novel Melt Pressure Intensifier Improves Extruder Screw Performance	113
A. D. Siegel and P. Hold, <i>Farrel Company</i>	
Multidimensional Control of Profile Extrusion by Thermal Methods	118
James F. Stevenson, L. James Lee, and Richard M. Griffith, <i>GenCorp</i>	
Lay-Out of Cooling Sections in Profile-Extrusion Plants	123
G. Menges and J. Schmidt, <i>Institut für Kunststoffverarbeitung in Industrie und Handwerk</i>	
Control of Fiber Orientation in Pipe Coextrusion	127
S. R. Doshi and J. M. Dealy, <i>McGill University</i>	
J.-M. Charrier, <i>Industrial Material Research Institute</i>	
Die Flow Characteristics of Compounds of Low Density Polyethylene with Small Particulates	131
Chin-Yuan Ma, James L. White, Frederick C. Weissert, and Kyonsuku Min, <i>The University of Akron</i>	
The Effect of Die Plate Temperature Gradients on Pellet Size Distribution from Underwater Die-Face Pelletizers	135
Louis S. Henderson, III, <i>ARCO Chemical Company</i>	
Wire-Coating Analysis without the Lubrication Approximation	139
Evan Mitsoulis, <i>University of Ottawa</i>	
Effects of Secondary Cavities, Inertia and Gravity on Extrusion Dies	144
William K. Leonard, <i>3M Company</i>	

COMPUTERS AND PLASTICS—PARTNERS IN PROGRESS

Computerization of the Plastics Molding Plant	150
Stanton F. Mesh, <i>Loranger Manufacturing Corporation</i>	
Intelligent Mold Concept and Statistical Process Control	153
Thomas P. Linehan, <i>D-M-E Company</i>	
Computer Simulation of Mold Filling and Cooling—How to Test and Evaluate Programs	158
Ernest C. Bernhardt and Giorgio Bertacchi, <i>Plastics & Computer Inc.</i>	
Use of Computers in Plastics Formulation Technology	162
Andrew Auerbach and John Grates, <i>Celanese Engineering Resins Co.</i>	
The Effect of New Technology on the Processing Plant	167
John J. Fitzgerald, <i>Application Engineering Corporation</i>	
An Automated Simulation of Compression Mold Filling for Complex Parts	169
Tim A. Osswald and Charles L. Tucker III, <i>University of Illinois at Urbana-Champaign</i>	
Calendering Control—A New Approach	173
Tan P. Srinivasan, <i>LFE Corporation</i>	
Modeling of Shrinkage for HDPE Disk Shape	177
Georges Salloum and Denis Charland, <i>Industrial Materials Research Institute</i>	
Bernard Sanschagrín, <i>Ecole Polytechnique of Montreal</i>	
Computer Aided Engineering: Software for Single Screw Extrusion Design and Analysis	181
Donald H. Sebastian, <i>Polymer Processing Institute</i>	
Automated Structural Analysis of Plastic Sheet	184
Mark D. Minnichelli, Charles M. Mulcahy, and Gerald G. Trantina, <i>General Electric Company</i>	

MOLD MAKING AND MOLD DESIGN DIVISION

How to Buy a Better Injection Mold	190
Edward J. Paskey, <i>Blue-Water/Mold, Inc.</i>	
Mold Designer's Responsibility	192
Don F. Hoffman, <i>Don F. Hoffman Company, Inc.</i>	
Statistical Process Control—Second Wave	196
Don Butler, <i>Butler Learning Systems</i>	

Stack Mold Design Considerations	197
Mike Urquhart, <i>Husky Injection Molding Systems Limited</i>	
Stainless Plastic Mold Offers Bright Benefits	201
John Worbye, <i>Uddeholm Corporation</i>	
Runnerless Molding—Split-Plate Concept	206
Robert W. Dealey, <i>D-M-E Company</i>	
Cae in Plastics	1340
Colin Austin, <i>Moldflow Australia Pty. Ltd.</i>	

MEDICAL PLASTICS DIVISION

Synthetic Polymers in Artificial Hearts: A Progress Report	212
Michael Szycher, Ph.D. and Victor L. Poirier, MBA, <i>Thermedics Inc.</i>	
Synthesis and Properties of Biomedical Graft Copolymers	218
J. L. Williams, <i>Becton Dickinson Research Center</i>	
Recent Advances in Medical Plastics Analysis	221
Lecon Woo, Craig Sandford, and Robert Walter, <i>Travenol Laboratories</i>	
Gel Permeation Chromatography as a Quality Control Tool in the Medical Plastics Industry	226
John P. Helfrich and Edward C. Conrad, <i>Millipore Corporation</i>	
Property Changes of UHMW Polyethylene During Implantation—First Hints for the Development of an Alternative Polyethylene	230
P. Eyerer, <i>Universität Stuttgart</i>	
Artificial Skin: A Fifth Route to Organ Repair and Replacement	233
I. V. Yannas and D. P. Orgill, <i>Massachusetts Institute of Technology</i>	
Durability Prediction and Testing of Elastomeric Biomaterials	239
J. L. Kardos, K. Gadkaree, and A. P. Bhate, <i>Washington University</i>	
Influence of Mixing Technique on Some Properties of PMMA Bone Cement—Clinical Practice, Producer's Advice, Material Investigations, Improvements	242
P. Eyerer, <i>Universität Stuttgart</i>	
R. Jin, <i>Hefei Polytechnical University</i>	

PLASTICS ANALYSIS DIVISION

The Activation Spectrum and Its Application to Stabilization and Weatherability Tests	248
Norma D. Searle, <i>Consultant, Plastics and Chemicals</i>	
Acetal Homopolymer in Water Contact Service	252
P. E. Sample and N. E. West, <i>E. I. du Pont de Nemours & Co., Inc.</i>	
Polyolefin Longevity for Telephone Service	258
H. M. Gilroy, <i>AT&T Bell Laboratories</i>	
Fundamentals of Polymer Adhesion	261
David W. Dwight, <i>Virginia Polytechnic Institute and State University</i>	
Analysis of Adhesive Tensile Test Methods	262
K. L. DeVries, <i>University of Utah</i>	
K. C. Gramoll and G. P. Andersen, <i>Morton Thiokol/Wasatch Division</i>	
Analytical Instrumentation to Study the Curing Mechanism of LARC-TPI High Temperature Adhesive	267
Shu-Ying Chang, Samuel J. Huang, and Julian F. Johnson, <i>University of Connecticut</i>	
Surface Characterization of Corona Treated Polyethylene Films	269
M. A. Mier and C. G. Seefried, Jr., <i>Mobil Chemical Company</i>	
Estimation of Mark-Houwink Constants for Use in SEC Universal Calibration Procedures	273
Alfred Rudin, <i>University of Waterloo</i>	
Polymer Shear Degradation During Size Exclusion Chromatography	275
Howard G. Barth, <i>Hercules Incorporated</i>	
Application of a Mass Detector in Size Exclusion Chromatography	277
Shyhchang S. Huang and Howard G. Barth, <i>Hercules Incorporated</i>	
HPSEC Analysis of Polycarbonates	280
David A. Dunn and Gary L. Hagnauer, <i>Army Materials and Mechanics Research Center</i>	
Multilayer Printed Circuit Board Characterization by Thermal Analysis	283
W. J. Sichina and P. S. Gill, <i>E. I. du Pont de Nemours and Company, Inc.</i>	
Composite Lamination—Analysis and Modeling	289
B. K. Appelt, J. D. Gotro, T. L. Ellis, G. P. Schmitt, and J. P. Wiley, <i>IBM Corporation</i>	

Characterization of Peek/Carbon Fiber Composites by Thermal Analysis	293
William J. Sichina and P. S. Gill, <i>E. I. du Pont de Nemours and Company, Inc.</i>	
Coupled Use of Thermal Mechanical Analysis (TMA) and Computational Techniques to Predict Adhesive Bond Behavior	296
J. P. Foster, R. K. Porter, and M. M. Steiner, <i>Lockheed Research Laboratory</i>	
Small-Angle Neutron Scattering Facilities and Polymer Research at Oak Ridge	297
George D. Wignall, <i>Oak Ridge National Laboratory</i>	
Compatibility of Polyolefin Blends by Small Angle Neutron Scattering	301
David H. Lohse, <i>Exxon Chemical Company</i>	
Small-Angle Neutron Scattering (SANS) from Polystyrene Latices	303
M. A. Linne, A. Klein, and L. H. Sperling, <i>Lehigh University</i>	
Phase Decomposition Phenomena of Polystyrene/(Polyvinylmethylether)	306
C. C. Han, M. Okada, Y. Muroga, B. J. Bauer, and Q. Tran-cong, <i>National Bureau of Standards</i>	
Dynamic Dielectric Analysis: Nondestructive Material Evaluation and Cure Cycle Monitoring	311
D. Kranbuehl, S. Delos, and E. Yi, <i>College of William and Mary</i>	
J. Mayer and T. Jarvie, <i>NASA Langley Research Center</i>	
T. Hou and W. Winfree, <i>Kentron Technical Center</i>	
Monitoring of Matrix Property Changes During Composite Processing	318
John W. Lane, Michael A. Bachmann, and James C. Seferis, <i>University of Washington</i>	
Chemical Interpretation of the Relaxed Permittivity During Epoxy Resin Cure	321
Norman F. Sheppard, Jr. and Stephen D. Senturia, <i>Massachusetts Institute of Technology</i>	
Monitoring of Laminate Cure with Microdielectrometry	324
Wayne W. Bidstrup, Norman F. Sheppard, Jr., and Stephen D. Senturia, <i>Massachusetts Institute of Technology</i>	
Effects of Stoichiometric Mixing Ratio on Epoxy Cure—A Dielectric Analysis	327
David R. Day, <i>Micromet Instruments, Inc.</i>	
Acoustic Waveguide Monitoring of the Cure and Structural Integrity of Composite Materials	331
R. T. Harrold and Z. N. Sanjana, <i>Westinghouse R&D Center</i>	
Dielectric Analysis Looks at the Cure of Phenolic Resins	335
Stanley A. Yalof, <i>Tetrahedron Associates, Inc.</i>	
Interpretation of Discrete Small Angle Scattering from Polyethylene Deformed in the Solid State	339
Mark B. Boone and Edward S. Clark, <i>The University of Tennessee</i>	
SAXS Studies of Sulfonated Polystyrene Ionomers	341
J. J. Fitzgerald and R. A. Weiss, <i>University of Connecticut</i>	
Scattering Studies on an Aromatic Polyimide	344
T. P. Russell, <i>IBM Research Laboratory</i>	
Small-Angle Scattering Analyses of Hard Segment Microdomain Structure and Microphase Mixing in Polyurethane Elastomers	347
Jeffrey T. Koberstein and Louis M. Leung, <i>Princeton University</i>	
A Dynamic Small Angle X-ray Scattering Study of Stressed Kevlar® 49 Epoxy Composites	350
J. S. Lee, J. F. Fellers, and M. Y. Tang, <i>The University of Tennessee</i>	
J. S. Lin, <i>Oak Ridge National Laboratory</i>	

PLASTICS ANALYSIS DIVISION AND ENGINEERING PROPERTIES AND STRUCTURE DIVISION JOINT SESSION

Analysis of Polymer Blends Using FT-IR	356
Michael M. Coleman, <i>The Pennsylvania State University</i>	
Dynamic Mechanical Analysis of Poly(Alkyl Methacrylate)/Poly(Dimethyl Phenylene Oxide) Blends	357
Steven E. Keinath, <i>Michigan Molecular Institute</i>	
Fracture Toughness Measurements on Tough Polymers	361
G. C. Adams, <i>Experimental Station</i>	
J. G. Williams, <i>Imperial College</i>	
The Determination of Polymer-Polymer Interfacial Tension Using Digital Drop Image Processing	365
Jeffrey T. Koberstein, Jen-Kai Chen, and Spiros H. Anastasiadis, <i>Princeton University</i>	
Characterization of Polymer Mixtures by Small Angle X-ray Scattering Techniques	369
T. P. Russell, <i>IBM Research Laboratory</i>	
Phenoxy: Utility in Polymer Blends and Composites	373
C. N. Merriam and L. M. Robeson, <i>Union Carbide Corporation</i>	

Fracture Toughness of Short-Fiber Reinforced Composites	377
A. Tsarnas and J. L. Kardos, <i>Washington University</i>	
Enhanced Fatigue Resistance of Glass Reinforced PVC Composites	381
P. X. Nguyen, A. Chudnovsky, and A. Moet, <i>Case Western Reserve University</i>	
Structural Design Optimization of Composite Laminates	385
O. Ishai, <i>Technion</i>	
S. Krishnamachari and L. J. Broutman, <i>L. J. Broutman & Associates, Ltd.</i>	
Creep of Fiber Glass Reinforced Plastic Pressure Vessels	392
P. Ouellette and S. V. Hoa, <i>Concordia University</i>	
Effects of Fiber Orientation and Interfacial Adhesion on Fatigue Crack Propagation in Short-Glass-Fiber Reinforced Polypropylene Composites	396
M. J. Carling, J. A. Manson, and R. W. Hertzberg, <i>Lehigh University</i>	
G. Attalla, <i>Istituto Guido Donegani</i>	
Fracture Toughness of Bismaleimide and Other Resin Systems	399
Daniel A. Scola, <i>United Technologies Research Center</i>	
David J. Parker, <i>Sikorsky Aircraft</i>	
Thermal Processing and Characterization of Polyetheretherketone (PEEK) Matrices	401
Chris N. Velisaris and James C. Seferis, <i>University of Washington</i>	
Production of Film from Bulk Thermotropic Liquid Crystalline Cellulose Derivatives	404
G. W. Farell and J. F. Fellers, <i>University of Tennessee</i>	
Analysis of DTUL Test	407
R. C. Progelhof, <i>New Jersey Institute of Technology</i>	
J. L. Throne, <i>Amoco Chemicals</i>	
A. M. Jagani, <i>Graduate Student</i>	

PLASTICS ANALYSIS DIVISION AND ELECTRICAL AND ELECTRONIC DIVISION JOINT SESSION

Conductive Polymer Compositions and Their Application in Current Control Devices	412
Andrew Au, <i>Raychem Corporation</i>	
Polyimide as an Interlevel Insulator in Integrated Circuits	414
Stephen D. Senturia, <i>Massachusetts Institute of Technology</i>	
The Potential for Application of Conducting Polymers	417
Jane E. Frommer, <i>Allied Corporation</i>	
Molecular Nonlinear Optics: Nonlinear Optical Processes in Organic and Polymer Systems	421
A. F. Garito, <i>University of Pennsylvania</i>	

MARKETING DIVISION

Managing and Planning in the Plastics Industry	426
Peter R. Lantos, <i>The Target Group, Inc.</i>	
Another Brand of Research	429
Sue Finley, <i>CMS/Creative Marketing Services</i>	
Plastic Packaging Use in New Product Introductions	432
Kathleen J. Grasser and Daniel D. Rosener, <i>The Glen Consulting Group</i>	
Twenty Ways to Improve Advertisements in Specialized Business Magazines	434
Donald A. Dasburg, <i>Plastics World</i>	
Self-Motivation—The Plastics Marketer's Most Valuable Tool	436
Harri J. Brax, <i>BC Enterprises, Inc.</i>	
Publicity—A Competitive Advantage	1348
Helen Hennesie, <i>Hennesie Public Relations</i>	

THERMOPLASTICS MATERIALS AND FOAMS (NONVINYL) DIVISION

Impact Stress-Strain Behavior of Low-Density Closed-Cell Foam	438
J. L. Throne, <i>Amoco Chemicals Corp.</i>	
R. C. Progelhof, <i>New Jersey Institute of Technology</i>	
Impact Characteristics of Foams with Skins	442
J. L. Throne, <i>Amoco Chemicals Corp.</i>	
R. C. Progelhof, <i>New Jersey Institute of Technology</i>	
Molding Cycle Optimization of the Structural Foam Process	447
Roger G. Hamel and Joel A. Gribens, <i>Morton Thiokol Inc.</i>	

Evaluation of Foam Concentrates for the Structural Foam Industry	450
S. B. Driscoll and L. N. Venkateshwaran, <i>University of Lowell</i>	
C. J. Rosis and L. C. Whitney, <i>Nortech, Division of Northern Petrochemical</i>	
LLDPE with Improved Processability	454
Marc C. Godin and Chris Gick, <i>Novacor Chemicals Ltd.</i>	
Property/Processing Characteristics of a Broad MWD LLDPE Copolymer	459
G. Vasudevan and R. G. Shaw, <i>Mobil Chemical Company</i>	
VLDPE: A Breakthrough in Flexible Linear Polyethylene	463
Stuart J. Kurtz, <i>Union Carbide Corporation</i>	
Physical Properties of Polypropylene Terpolymers	467
Webster W. Kiang, <i>Northern Petrochemical Company</i>	
Polycarbonate Resins for Optical Memories and Compact Disks	470
Dr. Reinhard Riess, <i>Mobay Chemical Corporation</i>	
Dr. Hartmut Loewer, <i>Geschaefsbereich Kunststoffe</i>	
Titanate Coupling Agents—Developments of 1984	475
Salvatore J. Monte and G. Sugerman, Ph.D., <i>Kenrich Petrochemicals, Inc.</i>	

ELECTRICAL AND ELECTRONIC DIVISION

Outgassing of Class H Insulating Materials at 275°C and 325°C	480
James F. Quirk, <i>Westinghouse Electric Corporation</i>	
Aqueous Cleaners for Electronic Circuit Assemblies	485
L. T. Pappalardo, <i>AT&T Bell Laboratories</i>	
A Study of Variables Affecting Grouped Cable Flammability	491
D. J. Stonkus, <i>Ontario Hydro Research Division</i>	
A Review of Deflashing Techniques for Plastic Encapsulated Components	494
Robert F. Zecher, <i>Finmac, Inc.</i>	
High Performance Conductive Thermosets II	498
C. S. Barber, G. L. Causer, and S. C. Lin, <i>W. R. Grace & Co.</i>	
Nickel Coated Graphite Fiber Filled Electrically Conductive Polymeric Composites	502
David A. Janeczek, <i>Raytheon Company</i>	
Stephen Burke Driscoll, <i>University of Lowell</i>	
Influence of an Electrically Conductive Filler on the Rheology and Processing of Polyvinyl Chloride Formulations for Molding Video Records	506
Kalipada Palit, <i>RCA Laboratories</i>	
Temperature Dependence of Resistivity in Aluminum-Filled Composites	510
Melinda S. Rufener and Robert W. Roberts, <i>The University of Akron</i>	
EMI Shielding Using Stainless Steel Fiber Filled Plastics	512
R. P. Tolokan and J. C. Nablo, <i>Brunswick Corporation</i>	
Flame Retardant Nylon Compositions with Improved Tracking Index	516
Charles S. Ilardo and James J. Duffy, <i>Occidental Chemical Corporation</i>	
EMI-Shielded High Performance Thermoplastic Composites	520
R. G. Gaughan and T. P. Murtha, <i>Phillips Petroleum Company</i>	
Continuous Production of EMI (Electromagnetic Interference) Grade Compounds Using Co-Rotating, Twin-Screw Extruders	522
John Curry and John Farrell, <i>Werner & Pfleiderer Corporation</i>	

ENGINEERING PROPERTIES AND STRUCTURE DIVISION AND PLASTICS ANALYSIS DIVISION JOINT SESSION

Development of Phase Morphology and Orientation in Blends of Thermoplastic During Melt Processing	530
Kyonsuku Min, Shigeru Endo, James L. White, Thein Kyu, and John F. Fellers, <i>The University of Akron</i>	
Melt Flow Polyethylene/Polyimide Blends; Part 1: HDPE/PA-6	534
M. M. Dumoulin, P. Toma, and L. A. Utracki, <i>Industrial Material Research Institute</i>	
I. Jinnah and M. R. Kamal, <i>McGill University</i>	
Rheology-Property-Morphology Relationships in Blends of Nylon 6 with an Ethylene-Based Multifunctional Polymer	537
Hsiao-Ken Chuang and Chang Dae Han, <i>Polytechnic Institute of New York</i>	

Crystallization Behavior of Controll Rheology Polypropylenes	540
T. S. Dziemianowicz, <i>HIMONT U.S.A., Inc.</i>	
W. W. Cox, <i>Hercules Incorporated</i>	
Effect of Annealing and Heat Fusion on Residual Stresses in Polyethylene Pipe	545
A. Bhatnagar and L. J. Broutman, <i>Illinois Institute of Technology</i>	

ENGINEERING PROPERTIES AND STRUCTURE DIVISION

Influence of Materials and Structure on Performance of a Football Helmet	552
L. Vetter, <i>Sargent & Lundy</i>	
R. Vanderby, <i>Northwestern University</i>	
L. J. Broutman, <i>L. J. Broutman & Associates, Ltd.</i>	
Design and Construction of a Reinforced Plastic Oar for Use in Competitive and Recreational Rowing	559
John H. Prinsen, <i>Industrial Materials Research Institute</i>	
Graham Wilkins, <i>Paluski Boats</i>	
Sailboards, A Showcase for Applications of Plastics, Rubbers, and Composites in Sports	562
J.-M. Charrier, <i>Industrial Materials Research Institute (IMRI)</i>	
The Role of Surface Effects in the Deformation of Hard Elastic Polypropylene	565
C. J. Chou, A. Hiltner, and E. Baer, <i>Case Western Reserve University</i>	
Penetration of a Thermoplastic by a Cone-Cylinder Rigid Body	570
J.-P. Chalifoux and Q. X. Nguyen, <i>Ecole Polytechnique de Montréal</i>	
Poisson's Ratio of Engineering Plastics	574
Chul Soo Lee, Elmer Jones, and Robert Kingsland, <i>Allied Corporation</i>	
Some Results Concerning the Long-Term Bending of Plastics	578
O. S. Brueller, K. Werkmeister, and V. Mannl, <i>Technical University of Munich</i>	
Superpositions of Small Strains on Large Deformations as a Probe of Nonlinear Response in Polymers	582
Gregory B. McKenna and Louis J. Zapas, <i>National Bureau of Standards</i>	
A Theory for Crack Layer Propagation in Polymers	586
A. Chudnovsky and A. Moet, <i>Case Western Reserve University</i>	
Rheological Properties of High Impact Polystyrene Melts	588
P. P. Tong and E. J. Dormier, <i>Mobil Chemical Company</i>	
Fatigue Failure Mechanisms in Polymers	592
Kim C. Dao, Dennis J. Dicken, and Laura L. O'Nan, <i>General Electric Company</i>	
Tough, Easily Processable, Engineering Thermoplastics with Controllable Gloss	596
C. A. Weber, W. P. Paige, and M. W. Roll, <i>The Dow Chemical Company</i>	
Impact Energy and Rapid Crack Propagation in Plastic Pipes	599
Witold Brostow, <i>Drexel University</i>	
Willi F. Müller, <i>Hoechst Aktiengesellschaft</i>	
Hydrostatic Testing of Plastic Pipe and Fittings by a Flowing Method	602
P. E. Sample, <i>E. I. du Pont de Nemours & Co., Inc.</i>	
R. R. Geoffroy, <i>Springborn Laboratories, Inc.</i>	
Polymer Melt Elongation—Methods, Results, and Recent Developments	606
Joachim Meissner, <i>Eidgenoessische Technische Hochschule Zuerich</i>	
Shear and Biaxial Extensional Rheology of Polyethylene—Comparison of LLDPE and LDPE	613
H. H. Winter and E. Holly, <i>University of Massachusetts</i>	
New Extensional Rheometer Study on Polyethylenes	616
R. Muller, J. L. Barea, and D. Froelich, <i>E.A.H.P.</i>	
B. Morese-Seguella and D. Constantin, <i>C.d.F. CHIMIE S.A., Centre de Recherches Nord</i>	
The Effect of Thermal and Shear History on Rheology and Texture of a Thermotropic Liquid Crystalline Copolyester	619
G. G. Viola, D. S. Done, and D. G. Baird, <i>Virginia Tech</i>	
Rate Process Analysis Applied to the Mechanical Behavior of Glassy Bisphenol-A-Polycarbonate	623
Theresa K. Mattioli, <i>Xerox Corporation</i>	
David J. Quesnel, <i>University of Rochester</i>	
The Brittle Failure of Polycarbonate in High Rate Impact	630
S. P. Petrie, <i>University of Lowell</i>	
Fracture Toughness and Crack Arrest in Polymers	634
L. Rolland and L. J. Broutman, <i>Illinois Institute of Technology</i>	
The Fracture Behavior of Surface Embrittled Polymers	639
Paul K. So and Lawrence J. Broutman	

Notched-Izod Impact Testing of Ductile Materials Using a Dynatup Impact Tester	645
Stephen Havriliak, Jr. and V. E. Malpass, <i>Rohm and Haas Research Laboratories</i>	
An Easy Way to Describe the Mechanical Behaviour of Thermoplastics	649

Effect of Stress on Sorption of Water in an Epoxy Resin	723
T. C. Wong and L. J. Broutman, <i>Illinois Institute of Technology</i>	
Small Angle X-ray Scattering Studies on Simultaneous Biaxially Stretched Poly(ethylene terephthalate) (PET) Films	728
M. Cakmak and J. L. White, <i>University of Akron</i>	
J. E. Spruiell, <i>The University of Tennessee</i>	
J. S. Lin, <i>Oak Ridge National Laboratories</i>	
Rotational-Extrusion: A New Approach for the Development of Strong Polymer Morphologies with Enhanced Lateral Strength	733
Lee E. Hornberger and A. E. Zachariades, <i>IBM Research Laboratory</i>	

PLASTIC PRODUCT DESIGN

Design for Manufacturability: Computer-Integrated Design and Manufacturing for Plastic Product Development	736
Andrews O. Atkinson, <i>SDRC</i>	
Design of an All Composite Tanker Truck for Transportation of Chemicals	740
Joseph M. Plecnik and Jeff Howard, <i>North Carolina State University</i> Robert Short, <i>Composite Engineering</i> John Plecnik, <i>Belmont Abbey College</i> Treven Baker, <i>U.S. Army</i>	
Self Threading Screw Boss Design	744
R. A. Malloy, S. A. Orroth, and E. S. Arnold, <i>University of Lowell</i>	
Converting Metal Applications to Plastic Applications	749
John P. Morine, Jr., <i>Mobay Chemical Corporation</i>	

INJECTION MOLDING DIVISION

Dynamic Modeling and Control of Melt Temperature in Injection Molding	754
W. I. Patterson, M. R. Kamal, and V. G. Gomes, <i>McGill University</i>	
How to Achieve Balanced Cooling with Internal Manifolding	759
Charles Hsu, <i>Application Engineering Corporation</i>	
Cooling Time Reductions in the Injection Molding of Semi-Crystalline Polymers	761
D. Kirch and G. Menges, <i>Institut für Kunststoffverarbeitung</i>	
Mold Cooling	764
Colin Austin, <i>Moldflow Australia Pty. Ltd.</i>	
Computer-Aided Mold Cooling Design Improves Part Quality and Overall Productivity	767
Keith R. Schauer, <i>Application Engineering Corporation</i>	
Injection Molding of Aromatic Copolyesters	769
J. Duska, R. Layton, P. Mercier, and F. Scardiglia, <i>Dartco Mfg. Co.</i>	
Increasing Productivity with High Flow Polycarbonate	773
Jonathan M. Newcome, <i>Mobay Chemical Corporation</i>	
The Relationship between Crystallization Rate and Moldability of Modified PET Resins	777
James L. Hecht and Thomas M. Ford, <i>E. I. du Pont de Nemours & Co., Inc.</i>	
Filler Distribution and Orientation in Injection Moulded Thermoplastic Parts	781
Ralph Peter Hegler and Günter Mennig, <i>Deutsches Kunststoff-Institut</i>	
Improved Properties and Processing for Injection Molded Polycarbonate	786
Theresa A. Binder, W. Steven Boom, and William R. Burk, <i>The Dow Chemical Company</i>	
Improved Physical Property Control of Injection Molded Test Specimens	789
David J. Sandell and Gregory A. Campbell, <i>Mobil Chemical Company R&D</i>	
Methods for Monitor and Control of Clamp Tonnage of Toggle Machines	792
Dennis K. Rideout, <i>D-M-E Company</i>	
Streamlined Mold Changing: A System for Every Need	795
Edward A. Ruhl, <i>Sharp Die and Mold Company</i>	
Computer-Aided Mold Filling Design Improves Part Quality and Increases Productivity	798
L. Yang, <i>Application Engineering Corporation</i>	
Digital Hydraulics for Injection Molding in the Computer Age	800
Richard R. Shaffer, <i>JMG Associates Ltd.</i>	
The Incorporation of a Shrinkage Analysis Program within Your High Tech Company	803
Brian W. Adkins, <i>Advanced Custom Molders, Inc.</i>	
Studies and Simulations on Flow Behaviour in Injection Moulding	805
Thomas Schacht and Georg Menges, <i>Institut für Kunststoffverarbeitung</i>	
Pressure Loss Prediction in a Runner-Gate-Cavity System Including Juncture Loss	809
T. H. Kwon, D. Chu, and K. K. Wang, <i>Cornell University</i>	
Screening Tests for Static Charge Generation During Injection Molding	814
T. S. Dziemianowicz, <i>HIMONT U.S.A., Inc.</i> F. A. Fritz, <i>Hercules Incorporated</i>	
Computer Simulation of Injection Mold Filling for Viscoelastic Melts with Fountain Flow	818
M. R. Kamal, E. Chu, and P. G. Lafleur, <i>McGill University</i> M. E. Ryan, <i>SUNY</i>	
Generalized Criteria for Packing in Injection Molding	822
J. Greener, <i>Eastman Kodak Company</i>	

An Interactive Simulation of Cavity Filling in Injection Molding with Color Graphics	826
V. W. Wang, C. A. Hieber, and K. K. Wang, <i>Cornell University</i>	
Portable Reaction Injection Molding	830
Thomas Rand, <i>Massachusetts Institute of Technology</i>	
Increasing Profitability in Injection Molding Production by Automating the Material Flow	834
Herbert Muller and Georg Menges, <i>Institut für Kunststoffverarbeitung</i>	
Robotics for the Plastics Industry	838
John A. Vandenbergh, <i>AEC, Inc.</i>	
A Radical Reassessment of Rotary Knife Mill Design	842
G. Allan West, William W. Barnes, and Thomas J. Dumaine, <i>Nelmor Company, Inc.</i>	
New Generation Desiccant Technology	848
Paul H. Knoerl and Kirit D. Patel, <i>Whitlock, Inc.</i>	
Material and Additive Factors in Ultrasonic Assembly	850
Stephen T. Gallagan, <i>Branson Sonic Power Company</i>	
Spin Welding Up-Dating an Old Technique	855
Thomas J. La Bounty, <i>Midwest Technical Service</i>	

BLOW MOLDING DIVISION

PVC Blow Molding Using Twin-Screw Extruders	858
John Granata, <i>Hoover University, Inc.</i>	
Blow Molding of Engineering Resins for Structural Applications	860
John B. Higgins and Peter G. Meissner, <i>General Electric Company</i>	
Processing and Equipment Optimization of Large Part Blow Moldings from High Molecular Weight High Density Polyethylene	864
Manfred Dicks, <i>American Hoechst Corporation</i>	
Traditional and CAD/CAM Plastic Bottle and Tool Design	868
John L. Szajna, <i>Continental Can Company</i>	
The Chemical Resistance of HMW HDPE Drums I. Environmental Stress Crack Resistance	871
Earl V. Lind, <i>Container Corporation of America</i>	
Direct In-Line Fluorination of HDPE Fuel Tanks	876
K. J. Kallish, B. D. Bauman, and K. A. Goebel, <i>Air Products and Chemicals, Inc.</i>	
Polyethylene Containers, Given a Thin Barrier Layer via Sulfonation and via Combined Chlorination/Sulfonation	878
W. E. Walles, <i>The Dow Chemical Company</i>	
Blow Molding Highly Irregular Shaped Parts with Multiple Parting Lines	880
D. L. Peters and J. R. Rathman, <i>Phillips Chemical Company</i>	
Blow Molding of Steering Boots and Bellows from Thermoplastic Polyester Resin	883
Frank W. Kennedy and Joseph R. Konopka, <i>Bekum Plastics Machinery, Inc.</i>	
Blow Molding Bottles for Aseptic Packaging	885
Phillip R. Wingard, <i>Bekum Plastics Machinery, Inc.</i>	
Reheat Stretch-Blowmolding Ionomer Resins—Process, Performance, Applications	887
Tod F. Eberle, <i>Cincinnati Milacron, Inc.</i>	
Automated Blow Article Transfer and In-Line Trimming	890
Thomas L. Strojinc, <i>Hayssen Manufacturing Company</i>	
Process Control in Blow Molding	893
Alexander Farkas, <i>Siemens Allis</i>	
Some Technical Aspects of Retrofitting Blow Molding Equipment for Coextrusion	896
Edward M. Naureckas, <i>Coex Engineering</i>	
Radial Parison Programming with Flexible Dies, The PWDS System	898
D. Volker Voelz, <i>MOOG GmbH</i>	
Gregory A. Gleason, <i>MOOG, Inc.</i>	
Variable Frequency AC Drives for Use in Continuous Extrusion Blow Molding	903
Daniel J. King and John T. Dandurand, <i>Armour-Dial Inc.</i>	
W. Layne Carruth, <i>Control Systems Engineering, Inc.</i>	
Freeblowing PET Preforms	907
Frank P. Leigner, <i>The Goodyear Tire & Rubber Company</i>	
Structure Development in Stretch Blow Molding Polyethylene Terephthalate Bottles	912
Mukerrem Cakmak and James L. White, <i>University of Akron</i>	
Joseph E. Spruiell, <i>University of Tennessee</i>	

Improving Production and Quality Through the Blowcool Computer-Aided Design System	1351
<i>M. G. Bernhard, Application Engineering Corp.</i>	

POLYMER BLENDS AND ALLOYS

Melt Rheology and Thermal Analysis of LLDPE/LDPE Blends	918
<i>M. Kabiri Badr and C. I. Chung, Rensselaer Polytechnic Institute</i>	
A Fast Econometrical Method for Chemical Compatibility Determinations	922
<i>Leroy C. Oberholtzer, Rockwell International</i>	
Effect of Mixing Conditions on the Viscoelastic Properties of HDPE/HIPS Blends	926
<i>A. Garcia-Rejon and C. Rangel-Nafaile, Universidad Nacional Autonoma de Mexico</i>	
Polymer Blends as High Explosive Binders	930
<i>D. Mark Hoffman and Leonard E. Caley, Lawrence Livermore National Laboratory</i>	
A New Polymer Alloy Based on Polyolefin	934
<i>Tetsuzi Kakizaki, Mitsubishi Petrochemical Co., Ltd.</i>	
The Use of Polybutylene in Polyolefin Cling Film	938
<i>Richard M. Turke, Amoco Chemicals Corporation</i>	
Polyblends of Polycarbonate with ABS	941
<i>Rudolph D. Deanin and Chung-Wen Chu, University of Lowell</i>	
Impact Modified, Chemical-Resistant Poly(ethylene terephthalate)/Polycarbonate Blend	944
<i>James Y. J. Chung and Nelson R. Lazear, Mobay Chemical Corporation</i>	
<i>Ulrich R. Grigo, Bayer AG</i>	
Polyblends of Polyethylenes and Polypropylene with Styrene/Butadiene/Styrene Thermoplastic Elastomer	949
<i>Rudolph D. Deanin and Young-Shun Chang, University of Lowell</i>	
Polysulfone Carbonate Copolymers	951
<i>D. W. Fox, R. R. Gallucci, E. N. Peters, and G. F. Smith, General Electric Company</i>	

POLYMER MODIFIERS AND ADDITIVES DIVISION

The Effect of Silane Crosslinking on the Processing and Properties of Polyethylene	956
<i>R. P. Heggs and E. G. Schwarz, Union Carbide Corporation</i>	
Silane Treated Wet Ground Mica as a Reinforcing Filler for Polypropylene	960
<i>Carl J. Rieger, The Mearl Corporation</i>	
Compatibilizers for PP/Plasticized PVC Injection Molded Blends and Laminated Films	963
<i>M. Xanthos, Stevens Institute of Technology and Algerian Institute of Petroleum</i>	
<i>F. Riahi and N. Bouassida, Algerian Institute of Petroleum</i>	
Thermoguard 240—A Brominated Epoxy Resin Flame Retarder for Polar Polymers: Part 1—Nylon 6	968
<i>I. Touval, M&T Chemicals, Inc.</i>	
High Processability Filled Plastics Based on Melt Rheosynergism: Tentative Results for Inert Fillers	972
<i>A. P. Plochocki and S. S. Dagli, Stevens Institute of Technology</i>	
Stabilization of Filled Polypropylene	977
<i>D. Davidson and P. Stewart, Ciba-Geigy Corporation</i>	
Stabilization of Linear Low Density Polyethylene	982
<i>Janet D. Capolupo, Uniroyal Chemical Group, Division of Uniroyal, Inc.</i>	
Fluorocarbon Elastomer Processing Aid in Film Extrusion of Linear Low Density Polyethylenes	987
<i>Alfred Rudin, University of Waterloo</i>	
<i>Allan T. Worm, 3M</i>	
<i>John E. Blacklock, 3M Canada</i>	
Antioxidant Induced Color and Its Prevention in Polyolefin Polymers	989
<i>G. J. Klender, R. D. Glass, W. Kolodchin, and R. A. Schell, Ethyl Corporation</i>	
Compounding of Color Additives in Polycarbonate	997
<i>John E. Copp, Dow Chemical</i>	
Advances in Ignition Resistant Polycarbonate	1000
<i>L. S. Thomas and S. A. Ogoe, The Dow Chemical Company</i>	

VINYL PLASTICS DIVISION

Co-Rotating Twin Screw Compounding Studies of PVC Formulations	1004
<i>Harutun G. Karian, Baker Perkins Inc.</i>	
New Angles on the Design of PVC Twin Screw Extruders	1009
<i>W. Feistkorn and G. Menges, Institut für Kunststoffverarbeitung</i>	

From a Theoretical PVC Processing Model to New Practical Processing Equipment	1013
E. Krüger and G. Menges, <i>Institut für Kunststoffverarbeitung</i>	
Vinyl Institute Presentation	1017
Roy T. Gottesman, <i>The Vinyl Institute</i>	
Rheology of Flexible PVC Compounds I: The Influence of Resin Crystallinity	1018
D. L. Smith, S. H. Hookanson, and J. L. Irvine, <i>Vista Chemical Company</i>	
Rheology of Flexible PVC Compounds II: Verification of the Crystallinity Concept	1021
S. H. Hookanson, D. L. Smith, and J. L. Irvine, <i>Vista Chemical Company</i>	
Rheology of PVC; Part IV: Particulate Flow	1024
L. A. Utracki, <i>Industrial Materials Research Institute</i>	
Measurement of PVC Fusion (Gelation)	1027
James W. Summers, Elvira B. Rabinovitch, and Patrick C. Booth, <i>BFGoodrich Chemical Group</i>	
The Effect of Grain Shape on the Properties of PVC Resins and Compounds	1031
Paul R. Schwaegerle, <i>BFGoodrich Chemical Group</i>	
The Effects of Post Chlorination on Key Product and Processing Properties of PVC	1035
Richard C. Neuman, <i>BFGoodrich Chemical Group</i>	
Effects of Processing Variations on Izod Impacts Run Directly on Extruded PVC Pipe Samples	1039
J. David Bower and Peggy S. Holsopple, <i>American Hoechst Corporation</i>	
PVC Bottles—How You Test Them Makes a Difference	1042
E. J. Troy, T. J. Shortridge, and A. C. Fazey, <i>Rohm and Haas Company, Inc.</i>	
Dark Time Yellowing of White Rigid Vinyl Outdoor Weatherable Compounds	1046
Raymond A. Morris, Thomas G. Prejean, and John Glass Green, <i>Dow Chemical U.S.A.</i>	
Role of Organotin Mercaptide Stabilizer in Heat and Light Stability of PVC	1056
Elvira B. Rabinovitch, John L. Dorsch, James W. Summers, and Joseph G. Quisenberry, <i>BFGoodrich Chemical Company</i>	
A Monomeric Plasticizer for High Temperature Applications	1060
Marc T. Payne and James T. Renshaw, <i>Monsanto Polymer Products Company</i>	
An Evaluation of the Effects of Antimony and Tin Stabilizer on the Fusion Characteristics of PVC Dryblends	1064
Dane L. Clark, Brenda J. Hollo, Paul K. Tornstrom, Robert E. Turnbull, and Tom R. Woodley, <i>Synthetic Products Company</i>	
Factors Influencing Color Drift of Gamma Sterilized PVC Articles	1068
David S. Housel, <i>Akzo Chemie America</i>	
An Investigation of Acrylic Processing Aids for Low Molecular Weight PVC—I	1072
William J. Casey, <i>Metco America Inc.</i>	
Kenji Okano, <i>Mitsubishi Rayon Co., Ltd.</i>	
The Effect of Coupling on the Failure Mechanisms in Short Fiber Reinforced PVC	1076
J. Yuan, A. Hiltner, and E. Baer, <i>Case Western Reserve University</i>	
D. Rahrig, <i>BFGoodrich Company</i>	

DECORATING DIVISION

Decoration of Non-Circular Containers Using Computer Control	1082
Arthur C. Peck, <i>Permanent Label Corp.</i>	
High Solids and High Performance Low V.O.C. Finishes for Plastics	1086
Kim Farrell, <i>Bee Chemical Company</i>	
Pad-Transfer Decoration: Evaluation of the Part to Be Printed as a Practical Approach	1088
Gene Collard, <i>Alternative Screen Printing</i>	
Electroplateable Acetate Copolymer	1090
Alex S. Forschirm, <i>Celanese Engineering Resins</i>	
Benefits of Microprocessor Control for Hot Stamping Equipment	1093
William G. Fuhrman, <i>Kurz-Hastings Inc.</i>	

REINFORCED PLASTICS AND COMPOSITES—THERMOSET DIVISION

Squeezing Flow Characterization of Polymer Composites	1098
G. C. Martin and A. V. Tungare, <i>Syracuse University</i>	
The Effect of Processing Parameters on the Mechanical Properties of a Polyester Sheet Molding Compound	1102
K. A. Malburne and S. P. Petrie, <i>University of Lowell</i>	

Practical Techniques for the Use of PET-Glass Fiber Reinforcements in Composites	1107
D. S. Cordova, D. R. Coffin and H. H. Rowan, <i>Allied Corporation</i>	
A Tensor Description of Fiber Orientation in Short Fiber Composites	1113
Suresh. G. Advani and Charles L. Tucker, III, <i>University of Illinois at Urbana-Champaign</i>	
Automated Measurement of Fiber Orientation in Short Fiber Composites	1119
Mark L. Lovrich and Charles L. Tucker, III, <i>University of Illinois at Urbana-Champaign</i>	

COLOR AND APPEARANCE DIVISION

Traceability of Plastic Materials—A UL Requirement; An Organized Approach for Compliance	1124
Lin R. Johnson, P.E., <i>Hewlett Packard</i>	
New Developments in Chemical Import Regulation	1127
Thomas H. Milch, <i>Arnold & Porter</i>	
Environmental and Health Effects of Cadmium Pigments and Stabilizers in Plastics	1131
Rosalind Volpe, <i>Cadmium Council, Inc.</i>	
A Nine Point Program for Managing Employee Exposures at a Lead Chromate Manufacturing Facility	1135
John Simas, <i>Ciba-Geigy Corporation</i>	
Wastewater Treatment for Organic Pigments and Organic Dyes Users	1138
Robert L. Lulicci, <i>Sun Chemical Corporation</i>	

REINFORCED PLASTICS AND COMPOSITES—THERMOPLASTICS MATERIALS AND FOAMS (NONVINYL) DIVISION

The Effect of Melt Flow on Mechanical and Mold Flow Properties of Glass Reinforced Polypropylene	1142
Khemchand J. Nangrani, <i>Wilson-Fiberfil International</i>	
Factors Affecting the Crack Growth Resistance of Mica-Reinforced Polypropylene	1145
T. Vu-Khanh and B. Fisa, <i>Industrial Material Research Institute</i>	
The Evaluation of Carbon Fibers for Optimum Reinforced Thermoplastic Properties	1149
Steven R. Gerteisen, <i>Wilson-Fiberfil International</i>	
The Effect of Compounding Equipment on the Physical and Electrical Properties of Nickel Coated Graphite Filled Polymer Systems	1152
L. A. Acquarulo, Jr. and Bruce A. Luxon, <i>American Cyanamid Company</i>	
L. N. Valsamis and G. S. Donoian, <i>Farrel Company</i>	
Recycling a Mixture of Plastics—A Challenge in Today's Environment	1158
Albert Spaak, <i>Plastics Institute of America, Inc., Stevens Institute of Technology</i>	
New Neoalkoxy Titanate and Zirconate Coupling Agents	1164
Salvatore J. Monte and G. Sugerman, Ph.D., <i>Kerich Petrochemicals, Inc.</i>	
Structure-Property Relationships for Short Fiber-Reinforced Thermoplastics	1170
S. R. Doshi and J.-M. Charrier, <i>McGill University</i>	
Weldline Strength of Mica-Nylon 66 Composites	1174
F. Bataille, T. Vu-Khanh, and B. Fisa, <i>Industrial Materials Research Institute</i>	
Long Fiber Reinforced Thermoplastics—Where Do They Fit	1178
D. G. Brady and T. P. Murtha, <i>Phillips Petroleum Company</i>	
Advanced Composite Thermoplastics: A New Structural Material	1181
Andy Youngs, <i>Polymer Composites, Inc.</i>	

STATISTICAL PROCESS CONTROL

Statistical Methods and Applications—A Total Systems Approach	1186
Sally A. Werner and Joel R. Berenter, <i>Ford Motor Company</i>	
Statistical Process Control—A Custom Molder's Experience	1190
Dave Tallbacka, <i>Premix, Inc.</i>	
Statistical Process Control—Implementation	1192
James T. Oesterling, <i>LPPG Industries, Inc.</i>	
Statistical Quality Control in PVC Production	1197
John W. Kadlec, <i>Air Products and Engineering, Inc.</i>	
Statistical Process Control in Continuous Polypropylene Production	1200
Mark R. Dunn, <i>Shell Development Company</i>	
Gerald A. Strenk, <i>Shell Chemical Company</i>	

THERMOSET DIVISION

Processability of Thermosets as Affected by Compounding Conditions in Continuous Kneaders	1206
<i>Dilhan M. Kalyon, Stevens Institute of Technology</i>	
<i>M. Hallouch, Institute Algerien du Petrole</i>	
Effects of Particulates and Fiber Reinforcement on the Curing Behavior of Unsaturated Polyester Resin and Epoxy Resin	1212
<i>Dai Soo Lee and Chang Dae Han, Polytechnic Institute of New York</i>	
Crosslinked Polyestramides	1216
<i>Yasuo Sano, Kazuhiro Arita, Isao Masuda, Takahiko Hirono, and Yoshimasa Nakamura, Takeda Chemical Ind. Ltd.</i>	
Optimal Molding of Polyester Sheet Molding Compound	1219
<i>J. D. Fan, J. M. Marinelli, and L. James Lee, The Ohio State University</i>	
Determination of the Orientation of Short Glass Fibers in Sheet Molding Compound (SMC)	1224
<i>Hua-tie Kau, General Motors Research Laboratories</i>	
Fibre Composites with Internal Stresses Under Control	1229
<i>M. R. Piggott, M. S. Woo, and W. Vesovski, University of Toronto</i>	
Olefinic Reaction Molding of Large Structural Parts	1232
<i>Dr. Richard P. Geer and Richard D. Stoutland, Hercules Engineered and Fabricated Products Company</i>	
New Polymer-Cement Composite for Construction Materials	1236
<i>Chen-Chong Lin, New Jersey Institute of Technology</i>	
Montmorillonite Polymer Concrete: Zero-Shrinkage and Expanding Polymer Concrete with Enhanced Strength	1239
<i>E. Haque and C. D. Armeniades, Rice University</i>	
Modification of Polyester Resin for Making Low Cost High Impact Fiber Reinforced Polyester Pipes and Structural Units	1243
<i>Mohammad A. Semsarzadeh, George Mason University</i>	
Compimide 183: A New Cost Effective High Performance Bismaleimide Resin System for Use at Elevated Temperatures	1246
<i>H. D. Stenzenberger, M. Herzog, and W. Römer, Technochemie GmbH</i>	
<i>S. Pierce, M. S. Canning, and K. Fear, The Boots Company PLC</i>	
Transfer Pot Temperature	1250
<i>L. T. Manzione, AT&T Bell Laboratories</i>	
On the Applications of WLF Theory to Thermosetting Resins	1253
<i>T. H. Hou, Kentron International, Inc.</i>	
Experimental Study of the Fluid Mechanics and Energy Transfer Occurring in a Transfer Molding Pot	1256
<i>R. C. Progelhof and G. W. Poelzing, AT&T Bell Laboratories</i>	
Computer Simulation of Thermoset Molding	1260
<i>Trevor Smith, Moldflow Australia Pty. Ltd.</i>	
Processing-Property Relationships in Autoclave-Cured Graphite/Epoxy Composites—Part I	1266
<i>Jovan Mijović and H. T. Wang, Polytechnic Institute of New York</i>	
Preforming of Epoxy Transfer Molding Powder	1269
<i>R. C. Progelhof, L. T. Manzione, and S. C. Tighe, AT&T Bell Laboratories</i>	
Chemorheology of Epoxy Resins with Aromatic Diamines	1273
<i>Antonio Moroni, Jovan Mijović, Eli M. Pearce, and Cheu-Ching Foun, Polytechnic Institute of New York</i>	

STUDENT PAPERS

The Effect of Glass Content and Mixing on the Viscosity of Milled Glass Fiber Filled Polycarbonate	1278
<i>Lisa Crowley, SPE Student Chapter</i>	
Tensile Testing of Tubular Specimens: Modulus Corrections	1281
<i>Deborah A. Seymour, University of Connecticut</i>	
EMI Shield Enhancement Through Addition of Metal Fibers	1284
<i>Jeff Montanye, SPE Student Chapter</i>	
Comparison Between an Insulated Runner System and a Modified Insulated Runner System for Injection Molding	1287
<i>Vince Osman, Ball State University</i>	
Qualities and Processing of Extruded Polyetherimide 20–40% Carbon Filled	1289
<i>Steven G. Mielke, Hennepin Technical Centers</i>	

POLYURETHANE TECHNOLOGY

Exhaust Air Clearing and Blowing Agent Recovery at the Production of Polyurethane Flexible Foam	1294
Wolfgang Gans and Peter Eyerer, <i>Universität Stuttgart</i>	
Structure and Properties of Thermoplastic Polyurethane Elastomers	1297
Rudolph D. Deanin, Madhukar R. Murarka, and Vikram C. Kapasi, <i>University of Lowell</i>	
Thermoplastic Polyurethanes as Modifiers for Plastics and Elastomers	1300
H. W. Bonk, R. Drzal, C. Georgacopoulos, and T. M. Shah, <i>The Upjohn Company</i>	
Polyurethane-Polyester IPN in Reactive Polymer Processing	1304
T. Jeff Hsu and L. James Lee, <i>The Ohio State University</i>	
Novel Curatives for Polyurethanes	1309
Fui-Tseng H. Lee, Joseph Green, and James A. Vincent, <i>FMC Corporation</i>	
A Low Viscosity Polyester Polyol for RIM	1312
William H. McNamee, <i>Inolex Chemical Company</i>	

PLASTICS IN AUTOMOTIVE DIVISION

The Effect of Hydrogen Bonding Additives on the Clean Light Fluff Plastics Fraction from Automotive Shredders	1316
Gary J. DeAngelis, Brian Porter, and Dr. Rudy D. Deanin, <i>University of Lowell</i>	
Emaweld™ Applications in the Automotive Industry	1319
William X. Desmond, <i>Emabond, Inc.</i>	

THERMOFORMING DIVISION

Thermoformability of Thermoplastics Sheets: A Proposal for a Standardized Method	1324
R. Allard, <i>Industrial Materials Research Institute</i>	
J.-M. Charrier, M. Marangou, M. E. Ryan, S. Shrivastava, and R. Wu, <i>McGill University</i>	
Polystyrene Foam Sheet Expansion During Heating	1328
J. L. Throne, <i>Amoco Chemicals Corp.</i>	
Designing for Thermoforming	1334
Peter Hughes, <i>The Hughes Plastics Co., Inc.</i>	
Polypropylene Resins for Sheeting and Thermoforming	1337
J. H. Myers, <i>El Paso Products Co.</i>	
Author Index	1355
