

# CONTENTS

A Note to Students **vii**

## **1. INTRODUCTION 1**

What Is Physiological Psychology?

Approaches to the Study of Physiological Psychology

Overview

## **2. THE CELL 23**

The Membrane

The Nucleus

The Centriole

Cellular Activities

The Nerve Cell

Glial Cells

Techniques of Electrical Recording

Process of Electrical Recording

Electrical Properties of the Neuron

The Excitatory Postsynaptic Potential

The Inhibitory Postsynaptic Potential

Chemical Processes Underlying Electrical Potentials

Initiation and Propagation of the Action Potential

Synaptic Transmission

Summary

## **3. THE ANATOMY OF THE NERVOUS SYSTEM 59**

Some Introductory Terminology

Major Subdivisions of the Nervous System

The Peripheral Nervous System

The Central Nervous System

The Spinal Cord and Peripheral Nervous System

Spinal Nerves

Autonomic Pathways

The Cranial Nerves

The Brain Stem

The Cerebellum

The Hypothalamus  
The Telencephalon  
The Limbic System

#### **4. EVOLUTION OF THE NERVOUS SYSTEM 91**

From Independent Cell to Colony  
Development of the Central Nervous System  
The Amphibians  
The Reptiles  
The Mammals  
Brain Size  
Fiber Bundles  
Evolution of the Cerebellum  
The Birds  
Brain Structure and Behavior

#### **5. SENSORY PROCESSES 111**

Receptor Cells  
Vision  
Audition  
The Chemical Senses—Taste and Olfaction  
Taste  
Olfaction  
Somatosensory Systems  
Sensation—Final Considerations

#### **6. MOTOR SYSTEMS 159**

Skeletal Muscles  
The Reflex Arc  
Voluntary Movement

#### **7. MEMORY AND LEARNING 181**

Types of Learning  
Memory  
Electrical Correlates of Learning  
Role of Central Nervous System Structures in the Learning Process

#### **8. EMOTION AND MOTIVATION 215**

Emotion  
Motivation

#### **9. HIGHER FUNCTIONS 251**

Language  
Symbols: A Question  
Consciousness  
The Cortex and Higher Mental Functions
