Preface	ix
Introduction	1
What is artificial intelligence?	1
History of artificial intelligence	3
The future for AI	7
1 Knowledge in AI	9
1.1 Overview	9
1.2 Introduction	9
1.3 Representing knowledge	10
1.4 Metrics for assessing knowledge representation schemes	13
1.5 Logic representations	14
1.6 Procedural representation	17
1.7 Network representations	21
1.8 Structured representations	23
1.9 General knowledge	26
1.10 The frame problem	27
1.11 Knowledge elicitation	28
1.12 Summary	28
1.13 Exercises	29
1.14 Recommended further reading	30
2 Reasoning	31
2.1 Overview	31
2.2 What is reasoning?	31
2.3 Forward and backward reasoning	33
2.4 Reasoning with uncertainty	34
2.5 Summary	43
2.6 Exercises	43
2.7 Recommended further reading	44
3 Search	45
3.1 Introduction	45
3.2 Exhaustive search and simple pruning	55
3.3 Heuristic search	63
3.4 Knowledge-rich search	71

3.5	Summary	74
3.6	Exercises	75
3.7	Recommended further reading	75
4	Machine learning	77
4.1	Overview	77
4.2	Why do we want machine learning?	77
4.3	How machines learn	78
4.4	Deductive learning	84
4.5	Inductive learning	85
4.6	Explanation-based learning	96
4.7	Example: Query-by-Browsing	97
4.8	Summary	99
4.9	Recommended further reading	100
5	Game playing	101
5.1	Overview	101
5.2	Introduction	101
5.3	Characteristics of game playing	103
5.4	Standard games	104
5.5	Non-zero-sum games and simultaneous play	109
5.6	The adversary is life!	114
5.7	Probability	116
5.8	Summary	117
5.9	Exercises	118
5.10	Recommended further reading	119
6	Expert systems	121
6.1	Overview	121
6.2	What are expert systems?	121
6.3	Uses of expert systems	122
6.4	Architecture of an expert system	123
6.5	Examples of four expert systems	127
6.6	Building an expert system	129
6.7	Limitations of expert systems	134
6.8	Hybrid expert systems	135
6.9	Summary	135
6.10	Exercises	135
6.11	Recommended further reading	136
7	Natural language understanding	137
7.1	Overview	137
7.2	What is natural language understanding?	137
7.3	Why do we need natural language understanding?	138
7.4	Why is natural language understanding difficult?	138

7.5	An early attempt at natural language understanding: SHRDLU	140
7.6	How does natural language understanding work?	141
7.7	Syntactic analysis	143
7.8	Semantic analysis	153
7.9	Pragmatic analysis	158
7.10	Summary	160
7.11	Exercises	160
7.12	Recommended further reading	161
7.13	Solution to SHRDLU problem	161
8	Computer vision	163
8.1	Overview	163
8.2	Introduction	163
8.3	Digitization and signal processing	165
8.4	Edge detection	173
8.5	Region detection	182
8.6	Reconstructing objects	185
8.7	Identifying objects	191
8.8	Multiple images	197
8.9	Summary	200
8.10	Exercises	201
8.11	Recommended further reading	202
9	Planning and robotics	203
9.1	Overview	203
9.2	Introduction	203
9.3	Global planning	205
9.4	Local planning	210
9.5	Limbs, legs and eyes	216
9.6	Practical robotics	223
9.7	Summary	225
9.8	Exercises	226
9.9	Recommended further reading	227
10	Agents	229
10.1	Overview	229
10.2	Software agents	229
10.3	Co-operating agents and distributed AI	236
10.4	Summary	241
10.5	Exercises	242
10.6	Recommended further reading	243
11	Models of the mind	245
11.1	Overview	245
11.2	Introduction	245

CONTENTS

11.3	What is the human mind?	245
11.4	Production system models	247
11.5	Connectionist models of cognition	251
11.6	Summary	258
11.7	Exercises	258
11.8	Recommended further reading	259
11.9	Notes	260
12	Epilogue: philosophical and sociological issues	261
12.1	Overview	261
12.2	Intelligent machines or engineering tools?	261
12.3	What is intelligence?	262
12.4	Computational argument vs. Searle's Chinese Room	263
12.5	Who is responsible?	264
12.6	Morals and emotions	264
12.7	Social implications	265
12.8	Summary	266
12.9	Recommended further reading	266
	Bibliography	267
	Index	271
