

Overview of the Book	xv
Part One Image Processing	1
1 Digital Image and Display	3
1.1 What is a digital image?	3
1.2 Digital image display	4
1.2.1 Monochromatic display	4
1.2.2 Tristimulus colour theory and RGB colour display	5
1.2.3 Pseudo colour display	7
1.3 Some key points	8
Questions	8
2 Point Operations (Contrast Enhancement)	9
2.1 Histogram modification and lookup table	9
2.2 Linear contrast enhancement	11
2.2.1 Derivation of a linear function from two points	12
2.3 Logarithmic and exponential contrast enhancement	13
2.3.1 Logarithmic contrast enhancement	13
2.3.2 Exponential contrast enhancement	14
2.4 Histogram equalization	14
2.5 Histogram matching and Gaussian stretch	15
2.6 Balance contrast enhancement technique	16
2.6.1 *Derivation of coefficients, a , b and c for a BCET parabolic function	16
2.7 Clipping in contrast enhancement	18
2.8 Tips for interactive contrast enhancement	18
Questions	19
3 Algebraic Operations (Multi-image Point Operations)	21
3.1 Image addition	21
3.2 Image subtraction (differencing)	22
3.3 Image multiplication	22
3.4 Image division (ratio)	24

3.5	Index derivation and supervised enhancement	26
3.5.1	Vegetation indices	27
3.5.2	Iron oxide ratio index	28
3.5.3	TM clay (hydrated) mineral ratio index	29
3.6	Standardization and logarithmic residual	29
3.7	Simulated reflectance	29
3.7.1	Analysis of solar radiation balance and simulated irradiance	29
3.7.2	Simulated spectral reflectance image	30
3.7.3	Calculation of weights	31
3.7.4	Example: ATM simulated reflectance colour composite	32
3.7.5	Comparison with ratio and logarithmic residual techniques	33
3.8	Summary	34
	Questions	35
4	Filtering and Neighbourhood Processing	37
4.1	Fourier transform: understanding filtering in image frequency	37
4.2	Concepts of convolution for image filtering	39
4.3	Low-pass filters (smoothing)	40
4.3.1	Gaussian filter	41
4.3.2	The k nearest mean filter	42
4.3.3	Median filter	42
4.3.4	Adaptive median filter	42
4.3.5	The k nearest median filter	43
4.3.6	Mode (majority) filter	43
4.3.7	Conditional smoothing filter	43
4.4	High-pass filters (edge enhancement)	44
4.4.1	Gradient filters	45
4.4.2	Laplacian filters	46
4.4.3	Edge-sharpening filters	47
4.5	Local contrast enhancement	48
4.6	*FFT selective and adaptive filtering	48
4.6.1	FFT selective filtering	49
4.6.2	FFT adaptive filtering	51
4.7	Summary	54
	Questions	54
5	RGB-IHS Transformation	57
5.1	Colour coordinate transformation	57
5.2	IHS decorrelation stretch	59
5.3	Direct decorrelation stretch technique	61
5.4	Hue RGB colour composites	63
5.5	*Derivation of RGB-IHS and IHS-RGB transformations based on 3D geometry of the RGB colour cube	65
5.5.1	Derivation of RGB-IHS Transformation	65
5.5.2	Derivation of IHS-RGB transformation	66
5.6	*Mathematical proof of DDS and its properties	67
5.6.1	Mathematical proof of DDS	67
5.6.2	The properties of DDS	68
5.7	Summary	70
	Questions	70

6	Image Fusion Techniques	71
6.1	RGB-IHS transformation as a tool for data fusion	71
6.2	Brovey transform (intensity modulation)	73
6.3	Smoothing-filter-based intensity modulation	73
6.3.1	The principle of SFIM	74
6.3.2	Merits and limitation of SFIM	75
6.4	Summary	76
	Questions	76
7	Principal Component Analysis	77
7.1	Principle of PCA	77
7.2	Principal component images and colour composition	80
7.3	Selective PCA for PC colour composition	82
7.3.1	Dimensionality and colour confusion reduction	82
7.3.2	Spectral contrast mapping	83
7.3.3	FPCS spectral contrast mapping	84
7.4	Decorrelation stretch	85
7.5	Physical-property-orientated coordinate transformation and tasselled cap transformation	85
7.6	Statistic methods for band selection	88
7.6.1	Review of Chavez <i>et al.</i> 's and Sheffield's methods	88
7.6.2	Index of three-dimensionality	89
7.7	Remarks	89
	Questions	90
8	Image Classification	91
8.1	Approaches of statistical classification	91
8.1.1	Unsupervised classification	91
8.1.2	Supervised classification	91
8.1.3	Classification processing and implementation	92
8.1.4	Summary of classification approaches	92
8.2	Unsupervised classification (iterative clustering)	92
8.2.1	Iterative clustering algorithms	92
8.2.2	Feature space iterative clustering	93
8.2.3	Seed selection	94
8.2.4	Cluster splitting along PC1	95
8.3	Supervised classification	96
8.3.1	Generic algorithm of supervised classification	96
8.3.2	Spectral angle mapping classification	96
8.4	Decision rules: dissimilarity functions	97
8.4.1	Box classifier	97
8.4.2	Euclidean distance: simplified maximum likelihood	98
8.4.3	Maximum likelihood	98
8.4.4	*Optimal multiple point reassignment	98
8.5	Post-classification processing: smoothing and accuracy assessment	99
8.5.1	Class smoothing process	99
8.5.2	Classification accuracy assessment	100
8.6	Summary	102
	Questions	102

9	Image Geometric Operations	105
9.1	Image geometric deformation	105
9.1.1	Platform flight coordinates, sensor status and imaging geometry	105
9.1.2	Earth rotation and curvature	107
9.2	Polynomial deformation model and image warping co-registration	108
9.2.1	Derivation of deformation model	109
9.2.2	Pixel DN resampling	110
9.3	GCP selection and automation	111
9.3.1	Manual and semi-automatic GCP selection	111
9.3.2	*Towards automatic GCP selection	111
9.4	*Optical flow image co-registration to sub-pixel accuracy	113
9.4.1	Basics of phase correlation	113
9.4.2	Basic scheme of pixel-to-pixel image co-registration	114
9.4.3	The median shift propagation technique	115
9.4.4	Summary of the refined pixel-to-pixel image co-registration and assessment	117
9.5	Summary	118
	Questions	119
10	*Introduction to Interferometric Synthetic Aperture Radar Techniques	121
10.1	The principle of a radar interferometer	121
10.2	Radar interferogram and DEM	123
10.3	Differential InSAR and deformation measurement	125
10.4	Multi-temporal coherence image and random change detection	127
10.5	Spatial decorrelation and ratio coherence technique	129
10.6	Fringe smoothing filter	132
10.7	Summary	132
	Questions	134
	Part Two Geographical Information Systems	135
11	Geographical Information Systems	137
11.1	Introduction	137
11.2	Software tools	138
11.3	GIS, cartography and thematic mapping	138
11.4	Standards, interoperability and metadata	139
11.5	GIS and the Internet	140
12	Data Models and Structures	141
12.1	Introducing spatial data in representing geographic features	141
12.2	How are spatial data different from other digital data?	141
12.3	Attributes and measurement scales	142
12.4	Fundamental data structures	143
12.5	Raster data	143
12.5.1	Data quantization and storage	143
12.5.2	Spatial variability	145
12.5.3	Representing spatial relationships	145

12.5.4	The effect of resolution	146
12.5.5	Representing surfaces	147
12.6	Vector data	147
12.6.1	Representing logical relationships	148
12.6.2	Extending the vector data model	153
12.6.3	Representing surfaces	155
12.7	Conversion between data models and structures	157
12.7.1	Vector to raster conversion (rasterization)	158
12.7.2	Raster to vector conversion (vectorization)	160
12.8	Summary	161
	Questions	162
13	Defining a Coordinate Space	163
13.1	Introduction	163
13.2	Datums and projections	163
13.2.1	Describing and measuring the Earth	164
13.2.2	Measuring height: the geoid	165
13.2.3	Coordinate systems	166
13.2.4	Datums	166
13.2.5	Geometric distortions and projection models	167
13.2.6	Major map projections	169
13.2.7	Projection specification	172
13.3	How coordinate information is stored and accessed	173
13.4	Selecting appropriate coordinate systems	174
	Questions	175
14	Operations	177
14.1	Introducing operations on spatial data	177
14.2	Map algebra concepts	178
14.2.1	Working with null data	178
14.2.2	Logical and conditional processing	179
14.2.3	Other types of operator	179
14.3	Local operations	181
14.3.1	Primary operations	181
14.3.2	Unary operations	182
14.3.3	Binary operations	184
14.3.4	N-ary operations	185
14.4	Neighbourhood operations	185
14.4.1	Local neighbourhood	185
14.4.2	Extended neighbourhood	191
14.5	Vector equivalents to raster map algebra	192
14.6	Summary	194
	Questions	195
15	Extracting Information from Point Data: Geostatistics	197
15.1	Introduction	197
15.2	Understanding the data	198
15.2.1	Histograms	198

15.2.2 Spatial autocorrelation	198
15.2.3 Variograms	199
15.2.4 Underlying trends and natural barriers	200
15.3 Interpolation	201
15.3.1 Selecting sample size	201
15.3.2 Interpolation methods	202
15.3.3 Deterministic interpolators	202
15.3.4 Stochastic interpolators	207
15.4 Summary	209
Questions	209
16 Representing and Exploiting Surfaces	211
16.1 Introduction	211
16.2 Sources and uses of surface data	211
16.2.1 Digital elevation models	211
16.2.2 Vector surfaces and objects	214
16.2.3 Uses of surface data	215
16.3 Visualizing surfaces	215
16.3.1 Visualizing in two dimensions	216
16.3.2 Visualizing in three dimensions	218
16.4 Extracting surface parameters	220
16.4.1 Slope: gradient and aspect	220
16.4.2 Curvature	222
16.4.3 Surface topology: drainage networks and watersheds	225
16.4.4 Viewshed	226
16.4.5 Calculating volume	228
16.5 Summary	229
Questions	229
17 Decision Support and Uncertainty	231
17.1 Introduction	231
17.2 Decision support	231
17.3 Uncertainty	232
17.3.1 Criterion uncertainty	233
17.3.2 Threshold uncertainty	233
17.3.3 Decision rule uncertainty	234
17.4 Risk and hazard	234
17.5 Dealing with uncertainty in spatial analysis	235
17.5.1 Error assessment (criterion uncertainty)	235
17.5.2 Fuzzy membership (threshold uncertainty)	236
17.5.3 Multi-criteria decision making (decision rule uncertainty)	236
17.5.4 Error propagation and sensitivity analysis (decision rule uncertainty)	237
17.5.5 Result validation (decision rule uncertainty)	238
17.6 Summary	239
Questions	239
18 Complex Problems and Multi-Criteria Evaluation	241
18.1 Introduction	241
18.2 Different approaches and models	242

18.2.1 Knowledge-driven approach (conceptual)	242
18.2.2 Data-driven approach (empirical)	242
18.2.3 Data-driven approach (neural network)	243
18.3 Evaluation criteria	243
18.4 Deriving weighting coefficients	244
18.4.1 Rating	244
18.4.2 Ranking	245
18.4.3 Pairwise comparison	245
18.5 Multi-criteria combination methods	248
18.5.1 Boolean logical combination	248
18.5.2 Index-overlay and algebraic combination	248
18.5.3 Weights of evidence modelling based on bayesian probability theory	249
18.5.4 Belief and Dempster–Shafer theory	251
18.5.5 Weighted factors in linear combination	252
18.5.6 Fuzzy logic	254
18.5.7 Vectorial fuzzy modelling	256
18.6 Summary	258
Questions	258
Part Three Remote Sensing Applications	259
19 Image Processing and GIS Operation Strategy	261
19.1 General image processing strategy	262
19.1.1 Preparation of basic working dataset	263
19.1.2 Image processing	266
19.1.3 Image interpretation and map composition	270
19.2 Remote-sensing-based GIS projects: from images to thematic mapping	271
19.3 An example of thematic mapping based on optimal visualization and interpretation of multi-spectral satellite imagery	272
19.3.1 Background information	272
19.3.2 Image enhancement for visual observation	274
19.3.3 Data capture and image interpretation	274
19.3.4 Map composition	278
19.4 Summary	279
Questions	280
20 Thematic Teaching Case Studies in SE Spain	281
20.1 Thematic information extraction (1): gypsum natural outcrop mapping and quarry change assessment	281
20.1.1 Data preparation and general visualization	281
20.1.2 Gypsum enhancement and extraction based on spectral analysis	283
20.1.3 Gypsum quarry changes during 1984–2000	284
20.1.4 Summary of the case study	287
20.2 Thematic information extraction (2): spectral enhancement and mineral mapping of epithermal gold alteration, and iron ore deposits in ferroan dolomite	287
20.2.1 Image datasets and data preparation	287
20.2.2 ASTER image processing and analysis for regional prospectivity	288

20.2.3	ATM image processing and analysis for target extraction	292
20.2.4	Summary	296
20.3	Remote sensing and GIS: evaluating vegetation and land-use change in the Nijar Basin, SE Spain	296
20.3.1	Introduction	296
20.3.2	Data preparation	297
20.3.3	Highlighting vegetation	298
20.3.4	Highlighting plastic greenhouses	300
20.3.5	Identifying change between different dates of observation	302
20.3.6	Summary	304
20.4	Applied remote sensing and GIS: a combined interpretive tool for regional tectonics, drainage and water resources	304
20.4.1	Introduction	304
20.4.2	Geological and hydrological setting	305
20.4.3	Case study objectives	306
20.4.4	Land use and vegetation	307
20.4.5	Lithological enhancement and discrimination	310
20.4.6	Structural enhancement and interpretation	313
20.4.7	Summary	318
	Questions	320
	References	321
21	Research Case Studies	323
21.1	Vegetation change in the three parallel rivers region, Yunnan province, China	323
21.1.1	Introduction	323
21.1.2	The study area and data	324
21.1.3	Methodology	324
21.1.4	Data processing	326
21.1.5	Interpretation of regional vegetation changes	328
21.1.6	Summary	332
21.2	Landslide hazard assessment in the three gorges area of the Yangtze river using ASTER imagery: Wushan–Badong–Zogui	334
21.2.1	Introduction	334
21.2.2	The study area	334
21.2.3	Methodology: multi-variable elimination and characterization	336
21.2.4	Terrestrial information extraction	339
21.2.5	DEM and topographic information extraction	344
21.2.6	Landslide hazard mapping	347
21.2.7	Summary	349
21.3	Predicting landslides using fuzzy geohazard mapping: an example from Piemonte, North-west Italy	350
21.3.1	Introduction	350
21.3.2	The study area	352
21.3.3	A holistic GIS-based approach to landslide hazard assessment	354
21.3.4	Summary	357
21.4	Land surface change detection in a desert area in Algeria using multi-temporal ERS SAR coherence images	359
21.4.1	The study area	359
21.4.2	Coherence image processing and evaluation	360

21.4.3	Image visualization and interpretation for change detection	361
21.4.4	Summary	366
	Questions	366
	References	366
22	Industrial Case Studies	371
22.1	Multi-criteria assessment of mineral prospectivity, in SE Greenland	371
22.1.1	Introduction and objectives	371
22.1.2	Area description	372
22.1.3	Litho-tectonic context – why the project’s concept works	373
22.1.4	Mineral deposit types evaluated	374
22.1.5	Data preparation	374
22.1.6	Multi-criteria spatial modelling	381
22.1.7	Summary	384
	Acknowledgements	386
22.2	Water resource exploration in Somalia	386
22.2.1	Introduction	386
22.2.2	Data preparation	387
22.2.3	Preliminary geological enhancements and target area identification	388
22.2.4	Discrimination potential aquifer lithologies using ASTER spectral indices	390
22.2.5	Summary	397
	Questions	397
	References	397
Part Four	Summary	399
23	Concluding Remarks	401
23.1	Image processing	401
23.2	Geographical information systems	404
23.3	Final remarks	407
Appendix A:	Imaging Sensor Systems and Remote Sensing Satellites	409
A.1	Multi-spectral sensing	409
A.2	Broadband multi-spectral sensors	413
A.2.1	Digital camera	413
A.2.2	Across-track mechanical scanner	414
A.2.3	Along-track push-broom scanner	415
A.3	Thermal sensing and thermal infrared sensors	416
A.4	Hyperspectral sensors (imaging spectrometers)	417
A.5	Passive microwave sensors	418
A.6	Active sensing: SAR imaging systems	419
Appendix B:	Online Resources for Information, Software and Data	425
B.1	Software – proprietary, low cost and free (shareware)	425
B.2	Information and technical information on standards, best practice, formats, techniques and various publications	426

B.3 Data sources including online satellite imagery from major suppliers, DEM data plus GIS maps and data of all kinds	426
References	429
General references	429
Image processing	429
