

TABLE OF CONTENTS

CHAPTER 1: A PSYCHOPHYSIOLOGICAL THEORY OF REINFORCEMENT, DRIVE, MOTIVATION, AND ATTENTION	1
1. Introduction	4
2. Buffer the Learning Cells	5
3. A Digression on Classical Conditioning	6
4. Motor Synergies as Evolutionary Invariants	7
5. A Thought Experiment: The Synchronization Problem of Classical Conditioning	7
6. Some Experimental Connections	10
7. Conditioned Arousal	11
8. Secondary Reinforcers	13
9. Minimal Network Realization of Conditioned Nonspecific Arousal	14
10. Secondary Conditioning: A Principle of Equivalence for the Anatomy of CS and UCS	16
11. Are Drives Energizers or Sources of Information?	17
12. External Facts versus Internal Demands	18
13. Internal Facts versus External Demands: Existence of Homeostatic, or Drive, Inputs	18
14. Conditioned Reinforcers, Drives, Incentive Motivation, and Habits	21
15. Comparison with Hullian Concepts	23
16. Data on Conditioned Reinforcers and Drives	24
17. Data on Reinforcement	25
18. Data on Self-Stimulation	25
19. Reinforcement Without Drive Reduction	26
20. Go Mechanism, Amplifiers, Now Print	27
21. Data on Incentive Motivation	29
22. Secondary Reinforcement and Hull's Paradox	30
23. Late Nonspecific Potential Shifts	30
24. An Emergent Neocortical Analog	31
25. Motivational Set: Is Incentive Motivation Conditionable?	36
26. Distinct Cortical Recurrent Loops for STM and LTM	37
27. Motivation-Dependent Responses to Sensory Cues: Multiple Sensory Representations or Developmental Competition for Synaptic Sites?	39
28. Sensory-Drive Heterarchy: Competitive Decisions After Drives and Conditioned Reinforcers Interact	40
29. Differential Effects of Drive and Reinforcement on Learning Rate versus Performance Speed	46
30. Drives and Reinforcers: Multiplicative, Additive, or Neither?	48
31. Suppression by Punishment	48
32. Antagonistic Rebound and Learned Avoidance	50
33. Slowly Accumulating Transmitter Gates in Tonicallly Aroused Competing Channels Cause Antagonistic Rebound	52
34. Dipole Fields in Motivational Processing by the Hippocampal-Hypothalamic Axis	55

35. Some Pharmacological and Physiological Correlates of Motivational Dipole Fields	58
36. Competition, Normalization, and STM Among Sensory Representations	60
37. Attention and the Persistence Paradox of Parallel Processing	62
38. Sensory Incentive versus Motor Incentive: The Hippocampus as a Cognitive Map	64
39. Expectancy Matching and Attentional Reset: Unblocking and Dishabituation	66
40. Concluding Remarks	71
References	74

CHAPTER 2: SOME PSYCHOPHYSIOLOGICAL AND PHARMACOLOGICAL CORRELATES OF A DEVELOPMENTAL, COGNITIVE, AND MOTIVATIONAL THEORY 82

PART I

1. Introduction: Self-Organizing Internal Representations	83
2. The Stability-Plasticity Dilemma in Adult Perception	85
3. Critical Period Termination and Cholinergic-Catecholaminergic Interactions	85
4. Hypothesis Testing and Error Correction in a Fluctuating Environment	85
5. Attention Shifts in Pavlovian Experiments	86
6. Transient Effects: Causality, STM Reset, and P300	88
7. A Thought Experiment About Self-Organization of SP Codes	90
8. The Problem of Stimulus Equivalence	90
9. Categorical Perception, Bayesian Statistics, and Temporally Unstable Feedforward Coding	91
10. Unconscious Inferences: Why Do Learned Feedback Expectancies Exist?	93
11. Processing Negativity and Match Detection	94
12. Novel Events Trigger Nonspecific Arousal	97
13. Mismatch Negativity (N200)	97
14. The Noise-Saturation Dilemma: Noise Suppression and Pattern Matching in Shunting On-Center Off-Surround Networks	97
15. Disinhibition of Mismatch Negativity by Unexpected Events	101
16. Attentional versus Orienting Subsystems: Error Perseveration, P300, and the Hippocampus	102
17. Parallel Hypothesis Testing in Real Time: STM Reset and Renormalization	104
18. Contrast Enhancement and STM Normalization in Competitive Feedback Networks	105
19. Limited Capacity STM System: Automatic versus Controlled Processing	106
20. Sigmoid Signal Functions and Noise Suppression	108
21. P300 and STM Reset: Updating of the Schema	109
22. Gated Dipoles: Antagonistic Rebound Due to Slow Transmitter Gating in Competing Channels	109
23. Tolerance Implies Withdrawal: Rebound Insomnia and a Way Out	113

24. A Nonspecific Arousal Burst Triggers an Antagonistic Rebound: Mismatch Triggers a P300	114
25. An Arousal Test of the Gating Transmitter	114
26. P300, Catecholamine Rebound, CNV Rebound, Critical Period Termination	116
27. A P300 Test of the Critical Period Buffer Mechanism	117
28. Adaptive Resonance: A Solution to the Stability-Plasticity Dilemma	117

PART II

29. The Dipole Field	118
30. Drives, Conditioned Reinforcers, Incentive Motivation, and CNV	121
31. Extinction, Conditioned Emotional Responses, Conditioned Avoidance Responses, and Secondary Conditioning	123
32. Cholinergic-Catecholaminergic Interactions in Drinking versus the Brain as a Chemical Bath	124
33. Intragastric versus Normal Drinking	125
34. Schedule-Induced Polydipsia, Frustration, and Expectancy Matching	127
35. Self-Stimulation and Kindling	127
36. Critical Period Reversal, P300 Suppression, and a Test of LTM Encoding by Cholinergic Pathways	130
37. Gestalt Switching Due to Ambiguous Figures and Habituation Induced Shifts of Categorical Boundaries	132
38. Motivational Switching and Hysteresis Without a Mythical Cusp Catastrophe	132
39. Formal Symptoms of Underaroused Depression	133
40. Formal Symptoms of Overaroused Depression	134
41. The Inverted U is Not a Unitary Concept	134
42. Inverted U in P300 and CNV	134
43. Parkinson Bracing, Starting, and Stopping	135
44. Juvenile Hyperactivity	135
45. Schizophrenic Overarousal	136
46. Analgesia: Endorphins versus Loud Noise	136
47. The Hyperphagic Syndrome and the Mythical Set-Point	137
48. Hypothalamic Stimulation and Rebound Eating	138
49. A Normal versus Hyperphagic Feeding Cycle	138
50. Some Other Drug-Induced Inverted U's and Hypothalamic-Hippocampal Interactions	143
51. Adaptive Resonance Between Dipole Fields	143
52. A Motivational Dipole Field: Drive-Reinforcer Matching and Motivational Competition	145
53. Theta, CNV, and Motor Potential Correlates of a Hippocampal Model	145
54. A Sensory Dipole Field: The Synchronization Problem and DC Potential Shifts	147
55. Secondary Conditioning	149
56. Valenstein Effect: Nonspecific Drive Representations or Nonspecific Conditioned Reinforcers and Conditioned Incentives?	149

57. Discrimination and Overshadowing Due to Conditioned Incentive Motivational Feedback: CNV Correlates	150
58. The Problem of Perseverating Prepotent Cues	152
59. Cortical Reset Triggers Hippocampal Reset: Two Distinct P300's	152
60. P300 Size Predicts Nothing About What Is Encoded in LTM	153
61. The Mackintosh, Bygrave, and Picton Experiment: A P300 Prediction	153
62. Concluding Remarks	153

APPENDIX: GATED DIPOLES

63. Transmitters as Gates	154
64. Intracellular Adaptation and Habituation	155
65. A Gated Dipole	156
66. Rebound Due to Phasic Cue Offset	157
67. Rebound Due to Arousal Onset	160
68. Inverted U in Dipole Output	160
69. Hypersensitive Underaroused Reaction to Phasic Increments	161
70. Paradoxical On-Reaction to Unexpected Events and Differential Enhancement of Overshadowed Cues	161
71. Paradoxical Lack of Rebound to Phasic Decrement: Ordering of Reinforcement Magnitude	162
72. Inhibiting Excitatory Resistance versus Exciting Inhibitory Conductance in Disinhibitory Incentive Motivational Pathways	163
73. Intracellular Dipoles	165
74. Presynaptic Normalization by Transmitter Diffusion and Feedback Inhibition	166
75. Paradoxical Inhibitory Action of Excitatory Transmitter on Tonicallly Aroused Cells	166
References	168

CHAPTER 3: PROCESSING OF EXPECTED AND UNEXPECTED EVENTS DURING CONDITIONING AND ATTENTION: A PSYCHOPHYSIOLOGICAL THEORY	180
--	-----

INTERNAL PROBLEMS OF SOME CONDITIONING MODELS

1. Merging Parallel Streams of Theory on Conditioning and Attention	182
2. The Processing of Expected and Unexpected Events in Short-Term Memory and Long-Term Memory	182
3. Some Internal Paradoxes	182
4. The Need for Behaviorally Unobservable Mechanisms	184
5. Causality Violation on the Behaviorally Observable Level	184
6. Some Unpredicted Data	185
7. Formal versus Physical Concepts: A Second Type of LTM?	185
8. Overexpectation, STM Signaling, LTM Gating, and Drive Representations	186

9. Secondary Conditioning Implies That Cue
and Drive Representations Are Distinct 188

SOME GENERAL PSYCHO- PHYSIOLOGICAL CONCEPTS

10. An Alternative Processing Framework:
Complementary Attentional and Orienting Subsystems 188
11. The Stability-Plasticity Dilemma and
Evoked Potential Correlates 189
12. Gated Dipoles 190
13. Antagonistic Rebound to Cue Offset 192
14. Antagonistic Rebound to Arousal Onset 193
15. What Is An Expectation? 193
16. Unexpected Events Trigger a Mismatch-
Modulated Arousal Burst 196
17. STM Reset versus STM Resonance 196
18. Chunking and Expectancy Learning 198
19. The Code of Adaptive Resonances 198
20. The Noise-Saturation Dilemma 199
21. STM Contrast Enhancement and Normalization:
Hypothesis Testing and Overshadowing in a
Limited-Capacity System 200
22. Overshadowing and Sigmoid Signal Functions 204
23. Noise Suppression and Selective Enhancement,
or Dishabituation, of Overshadowed Representations
by Unexpected Events 205
24. Noise Suppression and Pattern Matching 205
25. Sigmoid Signals and Tuning: Multiple
Effects of a US 206

CONDITIONING AND ATTENTION

26. Gated Feedback Dipoles 206
27. Drives, Conditioned Reinforcers, Incentive
Motivation, and CNV 210
28. Extinction, Conditioned Emotional Responses,
Conditioned Avoidance Responses, and
Secondary Conditioning 210
29. Motivational Baseline, Switching, and Hysteresis 212
30. Adaptive Resonance Between Dipole Fields 214
31. A Motivational Dipole Field: Drive-Reinforcer
Matching and Motivational Competition 214
32. A Sensory Dipole Field: The Synchronization
Problem and DC Potential Shifts 216
33. The Multidimensional Nature of Secondary
Conditioning 219
34. Unblocking, Context, and Habituation 219
35. Double Shock Experiments: Initial STM
Advantage of Surprising Events 221
36. Conditioned Reinforcer Learning 222
37. Incentive Motivation Feedback Influences
STM Competition 222
38. Salience Influences Overshadowing 223
39. Overshadowing on a Single Trial 223
40. The Tone Is More Unexpected After Two Shocks 223
41. Situational Cues 224
42. Release From Overshadowing by an Unexpected US 224

43. Modulation of US and Drive Input Effects by Expectancies, Conditioned Reinforcers, and Transmitter Habituation	224
44. Latent Inhibition	225
45. Interaction of STM Reset, STM Normalization, and LTM Gating in CER Experiments	226
46. Overshadowing During Key Pecking	226
47. The Problem of Perseverating Prepotent Cues	228
48. Two Distinct P300 Evoked Potentials in Cortex and Hippocampus	228
49. Nonmonotonic Relation Between P300 and CNV	229
50. Some Comparisons With the Formal Models	229
51. Schedule Interactions and Behavioral Contrast	230
References	231
CHAPTER 4: NEURAL DYNAMICS OF CATEGORY LEARNING AND RECOGNITION: ATTENTION, MEMORY CONSOLIDATION, AND AMNESIA	238
1. Introduction: Self-Organization of Recognition Categories	240
2. Bottom-Up Adaptive Filtering and Contrast-Enhancement in Short Term Memory	245
3. Top-Down Template Matching and Stabilization of Code Learning	248
4. Interactions Between Attentional and Orienting Subsystems: STM Reset and Search	249
5. Attentional Gain Control and Attentional Priming	250
6. Matching: The 2/3 Rule	251
7. Direct Access to Subsets and Supersets	254
8. Weber Law Rule and Associative Decay Rule for Long Term Memory	256
9. Fast Learning and Slow Learning: The Direct Access Rule	257
10. Stable Choices in Short Term Memory	258
11. Order of Search and the Subset Recoding Property	259
12. Example of Code Instability	260
13. Search of Subsets, Supersets, and Mixed Sets	263
14. The Nature of Categorical Invariance During Learning	267
15. Vigilance, Orienting, and Reset	269
16. Distinguishing Signal from Noise in Patterns of Variable Complexity: Weighing the Evidence	271
17. Vigilance Level Tunes Categorical Coarseness: Environmental Feedback	274
18. Universal Recognition Design Across Modalities	275
19. Interdisciplinary Relationships: Word Recognition, Evoked Potentials, and Medial Temporal Amnesia	278
Appendix: Network Equations	281
References	284

CHAPTER 5: ABSOLUTE STABILITY OF GLOBAL PATTERN FORMATION AND PARALLEL MEMORY STORAGE BY COMPETITIVE NEURAL NETWORKS	287
I. Introduction: Absolute Stability of Global Pattern Formation in Self-Organizing Networks	289
II. Some Sources of Sustained Oscillations	291
III. A Global Liapunov Function	293
IV. Application of the LaSalle Invariance Principle	294
V. Decomposition of Equilibria into Suprathreshold and Subthreshold Variables	298
VI. Almost All Suprathreshold Equilibrium Sets Are Countable	299
VII. All ω -Limit Points Are Equilibria	300
VIII. Neural Networks with Finitely Many Suprathreshold Equilibrium Points	301
IX. Concluding Remarks	306
References	307
 CHAPTER 6: A NEURAL THEORY OF CIRCADIAN RHYTHMS: THE GATED PACEMAKER	 309
1. Introduction	312
A. A Physiological Model of a Circadian Pacemaker	312
B. Multiple Oscillators from Similar Mechanisms	312
C. Metabolic Feedback and Slow Gain Control	313
D. Comparison With Other Pacemaker Models	313
2. The Gated Pacemaker	314
3. Qualitative Basis of Oscillations	317
4. Parameter Estimation	320
5. A Typical Oscillation in the Dark	321
6. Phase Response Curves in Diurnal and Nocturnal Gated Pacemakers	323
7. Parametric Structure of Oscillations: Threshold-Linear Signal Function	327
8. Circadian Period and the Transmitter Decay Rate	330
9. Dependence of Solution Types on Signal Function: The Sigmoid Case	330
10. Parametric Structure of Oscillations: Sigmoid Signal Function	332
11. Mittens, Oyster Shells, Sequence Clusters, and Chaos	334
12. Singular Perturbation Analysis	341
13. Concluding Remarks: Interdisciplinary Applications	347
References	349
 CHAPTER 7: A NEURAL THEORY OF CIRCADIAN RHYTHMS: ASCHOFF'S RULE IN DIURNAL AND NOCTURNAL MAMMALS	 352
1. Introduction: A Neural Model of the Circadian System in the Mammalian Suprachiasmatic Nuclei	354
2. Aschoff's Rule, The Circadian Rule, and Exceptions	354

3. Asymmetry of Fatigue and Light in Diurnal and Nocturnal Models	355
4. A Connection Between Fatigue Signal and Sleep-Dependent Process S	357
5. Testing Existence of Fatigue Signal	357
6. Gated Pacemaker Model	358
7. Signal Functions, Activity Thresholds, and Attenuation of Light Input During Sleep	360
8. Aschoff's Rule and its Exceptions: Numerical Studies	362
9. Circadian Rule: Numerical Studies	366
10. Light Attenuation and Self-Selected Light-Dark Cycles in Diurnal Mammals: A Prediction	366
11. Stability of τ : Clock-like Properties of Gated Pacemaker	368
12. Analysis of Aschoff's Rule	368
13. Analysis of Joint Action of Fatigue and Light Attenuation on Circadian Period	373
14. Analysis of Pacemaker Without Fatigue	377
15. Comparison With Other Models	380
16. Switching Between Diurnal and Nocturnal Properties	383
References	384
CHAPTER 8: A NEURAL THEORY OF CIRCADIAN RHYTHMS: SPLIT RHYTHMS, AFTER-EFFECTS, AND MOTIVATIONAL INTERACTIONS	386
1. Introduction: A Neural Model of the Circadian System in the Mammalian Suprachiasmatic Nuclei	388
2. Homeostatic and Nonhomeostatic Modulators of the Circadian Pacemaker	389
3. Long-Term After-Effects: Parametric and Nonparametric Experiments	390
4. Split Rhythms: Influences of Light, Hormones, and SCN Ablation	397
5. The Gated Pacemaker Model	406
6. Signal Functions, Activity Thresholds, and Attenuation of Light Input During Sleep	409
7. Long-Term After-Effects: Slow Gain Control and Associative Conditioning	410
8. Analysis of After-Effects	419
9. Alternative Slow Gain Control Processes	422
10. Split Rhythms and Inconsistent After-Effects on Period	425
11. Split Rhythms: Slow Gain Control Processes	426
12. Analysis of Split Rhythms: Depression of Gain by LL	428
13. Analysis of Split Rhythms: Interaction of Slow Gain, Pacemaker Gate, and Fatigue	429
14. Analysis of Split Rhythms: SCN Ablation Experiments	430
15. Fatigue as an Internal Zeitgeber	430
16. Analysis of Inconsistent After-Effects on Period	431
17. A Formal Connection Between After-Effects and Aschoff's Rule	431

18. Regulation of Motivated Behavior by Hierarchical Networks: The Homology Between Pacemaker Circuits and Motivational Circuits	433
19. Circadian Modulation of Sensitivity: Inverted U in Motivational Dipoles	436
20. The Underaroused and Overaroused Depressive Syndromes	436
21. Anticipatory Wheel Turning, Ultradian Feeding Cycles, and After-Effects of a Single Pulse of Light	437
22. Intracellular Gated Dipoles: Photoreceptors and Pacemakers	438
23. Comparison With Other Models	438
Appendix: Choice of Parameters	440
References	443
CHAPTER 9: ASSOCIATIVE AND COMPETITIVE PRINCIPLES OF LEARNING AND DEVELOPMENT: THE TEMPORAL UNFOLDING AND STABILITY OF STM AND LTM PATTERNS	448
1. Introduction: Brain, Behavior, and Babel	449
2. From List Learning to Neural Networks: The Self-Organization of Individual Behavior	449
3. Unitized Nodes, Short Term Memory, and Automatic Activation	450
4. Backward Learning and Serial Bowing	451
5. The Inadequacy of Rehearsal as an Explanatory Concept	451
6. The Inadequacy of Programmatic Time	453
7. Network versus Computer Parsing: Distinct Error Gradients at Different List Positions	453
8. Graded STM and LTM Patterns: Multiplicative Sampling and Slow Decay by LTM Traces	454
9. Binary versus Continuous Associative Laws	456
10. Retrieval Probes and LTM Gating of STM Mediated Signals	457
11. Behavioral Choices and Competitive Feedback	457
12. Skewing of the Bow: Symmetry-Breaking Between the Future and the Past	458
13. Evolutionary Invariants of Associative Learning: Absolute Stability of Parallel Pattern Learning	461
14. Local Symmetry and Self-Similarity in Pattern Learning and Developmental Invariance	463
15. The Unit of LTM is a Spatial Pattern: Global Constraints on Local Network Design	464
16. The Teleology of the Pattern Calculus: Retina, Command Cell, Reward, Attention, Motor Synergy, Sensory Expectancy, Cerebellum	468
17. The Primacy of Shunting Competitive Networks over Additive Networks	468
18. The Noise-Saturation Dilemma and Absolute Stability of Competitive Decision-Making	469
19. The Babel of Code Development Models	490

20. The Duality Between Code Development and Pattern Learning	471
21. Outstars and Instars	471
22. Adaptive Filtering of Spatial Pattern Sequences	474
23. Synaptic Conservation, Code Invariance, and Code Instability	476
24. Critical Period Termination, the Stability- Plasticity Dilemma, and Adaptive Resonance	477
25. Stable Coding of Pattern Sequences	478
References	481
