<i>Preface to the Second Edition</i>	v
<i>Preface to the First Edition</i>	vi
1 Trends and Issues in Cognitive Psychology	
Strategies and Structures, and Related Distinctions	1
Strategies and structures	1
Habits and capacities	2
Software and hardware	2
Cognitive penetrability	3
Performance and competence	3
Automatic and attentional processes	4
Ecological Validity	5
Individual Differences	6
Methodological Changes	8
Naturalistic psychology	8
Philosophical criteria	8
Introspective evidence	10
The Computational Metaphor	11
Summary	15
Recommended reading	16
2 Semantic Memory and the Structure of Knowledge	
Definitions of Semantic Memory: Scope and Function	17
The contents of the knowledge store: different kinds of knowledge	17
The computational metaphor and semantic memory	19
Experimental Findings	21
Methods	21
Evidence of categorical organization	22
Organization of semantic memory in children	23
Memory for texts and stories: restructuring and assimilation	24
The role of inferences in comprehension	27
Models of Semantic Memory	28
Network models	28
Set-theoretic models	38
Recommended reading	42

3	Visual Imagery in Thought	
	The Imagery Debate	43
	The Nature of Imagery	44
	Mental scanning experiments	45
	Mental rotation experiments	46
	Is an image like a percept?	50
	How do images differ from propositions?	53
	The Function of Imagery	54
	Imagery in recall	54
	Imagery in problem solving	56
	Imagery in recognition	59
	Imagery in the Cognitive System	61
	The dual code theory	61
	Tricodes and Multicodes	62
	Recommended reading	64
4	Concepts and Concept Formation	
	The Nature of Concepts	66
	Artificial concepts	66
	Natural concepts	67
	Abstract concepts	68
	Conceptual Behaviour	70
	Traditional Experimental Studies of Concept Formation	72
	Methods	72
	Experimental variables	74
	Theories of Concept Formation	75
	Feature analytic models	76
	Rosch: Prototype Theory	81
	Brooks: The Instance Comparison model	87
	Developmental Studies of Concept Formation	90
	Levels of categorization	90
	Feature abstraction theories	91
	Developmental applications of Prototype Theory	94
	Developmental applications of the Instance Comparison model	95
	Keil's predicate tree structure	95
	Recommended reading	97
5	Language and Thought: What is Language?	
	The Nature of Language	102
	Communication and representation	102
	Animal communication	104
	The evolution of language	104
	Essential features of human language	105
	The Chimpanzee Linguists	107
	Washoe	108
	Sarah	113
	Lana, Sherman and Austin	115

The Sign Language of the Deaf	118
Linguistic Relativity	121
Relativism and universalism	121
Lexical differences	123
Habits or capacities?	124
Cognitive development and linguistic structure	125
Recommended reading	126
6 Language and Thought: What is Thinking?	
The Nature of Thought	127
Different kinds of thinking	127
The role of subvocal speech in thought	128
Individual differences in Language Ability	130
The relationship of verbal and nonverbal intelligence	130
Genie: a case of language deprivation	130
Referential and expressive children	131
Sociolinguistic differences	132
The Deaf	133
Bilingualism	136
Thinking Without Language	140
Cognitive ability of nonhuman primates	140
Cognitive development in children	145
Recommended reading	159
7 Problem Solving and Reasoning	
The Information Processing Approach	160
Stages of problem solving	160
The Computational Approach	160
The influence of the computational metaphor	162
Methods of Studying Problem Solving	163
The use of verbal protocols	163
Individual Differences	166
Differences in ability and experience	166
Motivational factors	167
Cross-cultural differences	167
Types of Problem	168
Ill-defined problems	168
Problems of inducing structure	170
Problems of transformation: MOVE problems	170
Problems of arrangement	173
Logical Reasoning	173
Processing negative information	174
Processing conditional propositions	180
Solving three-term series problems	183
Syllogistic inference: reasoning with quantifiers	187
Making predictions: reasoning about probabilities	190
Recommended reading	192

8	Artificial Intelligence and Computer Simulation	
	The AI/CS Distinction	193
	AI and Sufficiency Conditions	194
	The Problem of Functional Equivalence	195
	Criteria for equivalence	195
	Equivalent to whom? : the problem of individual differences	196
	General equivalence or specific equivalence? : the problem of generalizability	197
	Equivalence of structures and equivalence of strategies	199
	Automatic and attentional processes: the problem of consciousness	200
	Declarative and procedural knowledge	200
	Analogue and digital processing	201
	Competence equivalence or performance equivalence? : the problem of phenomenology	204
	Weak equivalence and strong equivalence	204
	Models of Speech Recognition	205
	HEARSAY II	206
	HARPY	209
	Models of Language Understanding	211
	Schank's conceptual dependency model	211
	Weizenbaum's DOCTOR	214
	Winograd's SHRDLU	214
	Norman's questions	217
	Expert Systems: MYCIN	218
	Recommended reading	221
9	Hemisphere Differences	
	Clinical Studies of the Brain Injured	224
	Problems of assessment	224
	The effects of handedness	225
	The effects of maturation	227
	The effects of sex	229
	Deficits following unilateral lesions	229
	Complete or partial specialization?	230
	Evidence of interactive organization	231
	Studies of Split-Brain Patients	231
	Studies of Hemisphere Differences in Normal Subjects	234
	Techniques and methodological problems	234
	Interpretation of the observed asymmetries	237
	Models of Hemispheric Specialization	239
	Structural models	240
	Dynamic models	246
	Recommended reading	250
	<i>References</i>	251
	<i>Subject Index</i>	273
