Foreword xxvii
Preface to the Second Edition xxix
Preface to the First Edition xxxiii
Introduction xli

PART I Basic Concepts of GIS 1

CHAPTER 1 Some Concepts That Underpin GIS 3

OVERVIEW 3
You Ask: "What Is GIS About?" 3
You Ask Again: "What Is GIS About?" 4

EXERCISE 1-1 (PROJECT)

Finding a Site by Manual Means 5
More of What GIS Is About 10
Next Steps: Seemingly Independent Things You Need To Know 11
Determining Where Something Is: Coordinate Systems 12
Determining Where Something Is: Latitude and Longitude 14
Geodesy, Coordinate Systems, Geographic Projections, and Scale 15
Projected Coordinate Systems 15
Geographic vs. Projected Coordinates: A Comparison 16
Two Projected Coordinate Systems: UTM and State Plane 17

Physical Dimensionality 20
Global Positioning Systems 21
Remote Sensing 22
Relational Databases 22
Databases—What's Meant by Relational 27
Another Definition of GIS 28
Computer Software: In General 30
Computer Software: ArcGIS in Particular 31

STEP-BY-STEP **33**

EXERCISE 1-2 (PROJECT)

Developing a Fast Facts File for the Information You Learn **33**
Understanding the File Structure for the Exercises 34

EXERCISE 1-3 (MINOR PROJECT)

Getting Set Up with ArcGIS **35**

EXERCISE 1-4 (PROJECT)

Looking at the ArcCatalog Program **36**
Anatomy of the ArcCatalog Window 36
Setting Some Options 37
The Catalog Tree 39
Connecting to a Folder 41
The Toolbars and the Status Bar 42
Exploring Basic GIS Data Storage Models 46

EXERCISE 1-5 (MAJOR PROJECT)

Exploring Data with ArcCatalog—Fire Hydrants in a Village **47**
Copying Data over to Your Personal Folder 47
Examining the Table 50
Deriving Information from the Table 51
Sorting the Records 52

Finding Values in a Table 53
Identifying Geographic Features and Coordinates 53
Looking at GeoGraphics 54
A First Look at Metadata 55
Using ArcCatalog to Place Data in ArcMap 57

EXERCISE 1-6 (PROJECT)

A Look at Some Spatial Data for Finding a Site for the Wildcat Boat Facility 59
Using the Area on the Disk for Your Own Work 59
Copying Data over to Your New Folder 59
Searching for GIS Data 61
Exploring Soils 63
But Something Is Missing 65
Is the Newly Found Data Applicable? 67
Making a Personal Geodatabase Feature Class from a Coverage 67
Looking at the Landcover Personal Geodatabase Feature Class 68
Further Examining the Wildcat Boat Facility Area Data Sets 70
Looking at Wildcat Boat Data with ArcMap 73
Seeing the Results of the Join 74

EXERCISE 1-7 (PROJECT)

Understanding the ArcGIS Help System 75
A Button for Instant Help: What's This? 75
The Help System and Documentation 75
ArcGIS Help Across the Internet 76

EXERCISE 1-8 (DULL STUFF)

Using ArcCatalog for Mundane Operations 77

EXERCISE 1-9 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File 78
What's Next? 80

CHAPTER 2 **Characteristics and Examples of Spatial Data** **81**

OVERVIEW **81**

The Original Form of Spatial Data: Maps 81
Moving Spatial Data from Maps to Computers: Forces for Change 82
Spatial Data 86
Limiting the Scope 87
Spatial Data for Decision Making 87
Sets of Spatial Data: The Database 87
Spatial Databases: Inherent Difficulties 88
Information Systems 94
Uses for a Geographic Information System 95

STEP-BY-STEP **105**

EXERCISE 2-1 (MOSTLY OUTSIDE)

Appreciating Geographic Space and Spatial Data **105**

EXERCISE 2-2 (SETUP)

ArcMap Toolbar Examination and Review **106**

EXERCISE 2-3 (MAJOR PROJECT)

Exploring Different Types of Geographic Data **108**

The Basic Difference Between ArcCatalog and ArcMap 108
Exploring Data from the NAVSTAR Global Positioning System (GPS) 109
Preliminary 109
Seeing the GPS File in ArcMap 109
Looking at the GPS Track in the Context of a Variety of GIS Data 113
A Potpourri of Types of Geographic Data 113
Displaying Layers from Vector-Based Data Sets 115
Housekeeping: Saving and Restarting a Map 117
Selecting: Both Map Data and Attribute Data 118

Using the Measure Tool 120
County Boundaries 121
TIGER/Line Files 122
The Table of Contents: Display vs. Source vs. Selection 123

EXERCISE 2-4 (MAJOR PROJECT)

A Look at Raster Data 125
Digital Raster Graphics and Cell-Based Files 125
Experimenting with Different Ways of Seeing the Data 129
Digital Orthophotos 131
More TIGER/Line Files 134
Another Tie Between Attributes and Geographics 136
More Housekeeping: Shutting Down and Restarting ArcMap 136
Digital Elevation Model Files 137
Comparing the DEM and the DRG 140
Contour Line Files 140

EXERCISE 2-5 (PROJECT)

Triangulated Irregular Networks 142
TINS Are Three-Dimensional Data Sets 144
Elevations Based on Massive Sets of Data: The ESRI Terrain 146

EXERCISE 2-6 (PROJECT)

Geodatasets of Soils, Rocks, and Land Use 148
The Summarizing Procedure 149
Some Geological Data 151
A GRID of Land Use Data 152
Next Steps on Your Own 153

EXERCISE 2-7 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File 153

CHAPTER 3 **Products of a GIS: Maps and Other Information** 157

OVERVIEW 157

GIS and Cartography—Compatibility? 157

Products of a Geographic Information System 158

Overall Requirements for Utility 158

Classification of GIS Products 159

Documenting Products 161

Thoughts on Different Types of Products 162

STEP-BY-STEP 167

The Data View and the Layout View 167

EXERCISE 3-1 (WARM-UP)

Templates 168

EXERCISE 3-2 (PROJECT)

Templates That Contain Data 170

Controlling Your View of the Map: Zooming 172

Understanding the Panning and Other Controls 173

Adding Other Map Elements 174

EXERCISE 3-3 (MAJOR PROJECT)

Data Frames 175

Adding Data to Data Frames 176

A Summary of the Graphic Indicators 177

Tinkering with the Map—Scale Bars 178

Legends 179

EXERCISE 3-4 (MINI PROJECT)

Looking at the Plethora of Mapmaking Tools and Options 180

EXERCISE 3-5 (MAJOR PROJECT)

Making a Map of the Wildcat Boat Data Sets 185

EXERCISE 3-6 (MAJOR PROJECT)

Enhancing Communication: Styles, Layer Files, Reports, Charts, and Graphics **186**

Layer Files 186
Styles 189
Adding and Using a Style 190
Reports 191
Charts 192
Graphics 195
Making Graphics out of Geographic Features 199

EXERCISE 3-7 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File **200**

CHAPTER 4 **Structures for Storing Geographic Data** **203**

OVERVIEW **203**

Why Is Spatial Data Analysis So Hard? 203
How the Computer Aids Analyze Spatial Data 204
Complexity of Spatial Data 204
Structures for Spatial Data 205
Storage Paradigms for Areal Data 206
Fundamental Bases of Geographic Data Models 206
Raster Data Model 208
Vector Data Model 210
A Multiplicity of "Storadigms" 211
Vector-Based Geographic Data Sets—Logical Construction 211
Zero-Dimensional Entities in a Two-Dimensional Field: Points 212
One-Dimensional Entities in a Two-Dimensional Field: Lines 213
Two-Dimensional Entities in a Two-Dimensional Field: Polygons 214
Three-Dimensional Entities in a Three-Dimensional Field: Triangles and Multipatches 215
Specific ESRI Spatial Vector Data Storage Mechanisms 215
The Geodatabase Data Structure 216

Geodatabase Software 216
Polygons within Polygons—Perimeter and Area Calculations 217
Geodatabases—Layout in the Computer 218
Geodatabases—Logical Construction 219
Geodatabases—Feature Shape 220
Nested Polygons in Geodatabases 221
Geodatabases and Attributes 221
Objects—First Acquaintance 223
The Shapefile Data Structure 223
Summarizing Vector Data Set Features 225
Summary of Logical Structures of Vector-Based GIS Data Sets 226
Raster-Based Geographic Data Sets—Logical Construction 226
Raster-Based Geographic Data Sets—Layout in the Computer 228
TINs 229
TIN-Based Geographic Data Sets—Layout in the Computer 230
Spatial Reference 231

STEP-BY-STEP 233

EXERCISE 4-1 (WARM-UP)

Meet ArcToolbox 233

EXERCISE 4-2 (WARM-UP)

A Look at Some Trivial Personal Geodatabase Feature Classes 235
More Help 236

EXERCISE 4-3 (WARM-UP)

Making a Personal Geodatabase Feature Class Normal TextToFeature 237
Specification of the Input Text File for the Create Features From Textfile Tool 238
Labeling Features 241
Making Polygons From Lines 242

Areas and Perimeters Examined 243
Labeling Features 243

EXERCISE 4-4 (QUICK QUIZ)

Areas and Perimeters 244

EXERCISE 4-5 (PROJECT)

Make a File Geodatabase Feature class for a Foozit_Court 245

EXERCISE 4-6 (EXPLORATION)

Understanding a Couple of Things That Don't Look Right 247

Computers and Inexact Computation 248

EXERCISE 4-7 (PROJECT)

Geodatabase Topology 249

Creating a New Topology 250
What Moves When Features Are Adjusted: Rank 251
Topology Rules 251
Validating Topology 252
A Warning: Changes Made through Topology Are Permanent 254

EXERCISE 4-8 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File 254

CHAPTER 5 Geographic and Attribute Data: Selection, Input, and Editing 257

OVERVIEW 257

Concerns About Finding and Collecting Data 257
Looking for Data on the Internet 258
Steps in Developing the Database 258
GPS and GIS 263
Anatomy of the Acronym: "Global Positioning System" 264
What Time Is It? 267

STEP-BY-STEP 269

EXERCISE 5-1 (WARM-UP)

Looking at Areal Representations of the Real World **269**

Looking at Reference Systems 271

Looking at Coordinate Systems 272

Using the Reference System to Discover the Boundary Coordinates of a State Plane Zone 273

Primary Lesson 274

EXERCISE 5-2 (PROJECT)

Looking at Geographic Data on the Web **275**

EXERCISE 5-3 (PROJECT)

Digitizing and Transforming **275**

A Plan for Digitizing and Transforming 276

Getting Started 277

Loading an Image File as a Layer in ArcMap 277

Loading the New, Blank Shapefile into ArcMap 278

Adding Line Features to a Shape File by Using the Editing Facility in ArcMap 278

Converting a Shapefile to a Geodatabase Feature Class and Giving It Real-World Coordinates 282

Converting the Shapefile to a Geodatabase Feature Class 282

Moving the Foozit_Court Feature Class into the Real World 282

EXERCISE 5-4 (PROJECT)

Digitizing Directly into a Real-World Coordinate System in a Geodatabase **287**

Preliminaries 287

Making the Feature Class That Will Be Digitized into Georeferencing 288

Moving the Sketch to UTM Zone 2 288

Digitizing the Line Boundaries of the Islands 289

Making Polygons of the Digitized Lines 290

291

Making Multipart Polygons 291
Merging Multipart Polygons 291

EXERCISE 5-5 (WARM-UP)

Digitizing Geodatabase Polygons and Coping with Topology 293
Making Copies of the Feature Class 294
Using CLIP to Remove Overlaps from the Feature Class 295
Using Topology to Remove Overlaps from the Feature Class 296

EXERCISE 5-6 (PROJECT)

Learning Some Editor Fundamentals 297
The Concept of the Edit Sketch 297
Making Sketches with Snapping 298
Experimenting with Editing and Polygons 301
Experimenting with the Editor's Union 301
Experimenting with the Editor's Intersect 301
Experimenting with the Editor's Buffer 301
Using Undo, Copy, and Cut 301
Working with Editing Lines Again 302

EXERCISE 5-7 (FOLLOW-ON)

Adding the Sixth Island 302
Creating a 3-D Feature 304

EXERCISE 5-8 (PROJECT)

Obtaining Field Data and Joining Tables 305
A Discussion of the Project 305
Organization 307
Environment and Measurements (Spatial Data) 307
Measurements (Nonspatial Data) 307
Recording Data 307
Team Assignments 308
Undertaking the Data Entry Process 308

Making a Table That Will Contain the Student Data 309
Populating the Student_Info Table with Data 309
Joining the Two Tables to Make a Single Table 310
Seeing the Results of the Join 310

EXERCISE 5-9 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File 311

PART II Spatial Analysis and Synthesis with GIS 315

CHAPTER 6 Analysis of GIS Data by Simple Examination 317

OVERVIEW 317
Information 317
Computer Hardware—What a Computer Does 319
Continuous and Discrete Phenomena 322
Some Implications of Discrete Representation for GIS 325
Scientific Notation, Numerical Significance, Accuracy, and Precision 325
Precision vs. Accuracy 326
Basic Statistics 328
Putting Values into Classes 330
Measurement Scales 331

STEP-BY-STEP 333

EXERCISE 6-1 (PROJECT)

Reviewing and Learning More of ArcMap 333
Examining the Toolbars 334
Pointing at Records 335
Two Windows Are Available for Selecting 336
Selecting Records (and, Thereby, Features) 337
Looking at the Other Capabilities of the Options Menu 338
Selecting Features (and, Thereby, Records) 338

Quick Selection of Features 339
Selecting by Location 339
Reviewing and Understanding Actions on the Table of Contents 341
Layers and the Data Frames 341
Changing Layer Properties 342

EXERCISE 6-2 (PROJECT)

Categorization and Symbolization 345
Thinking About Maps Again 345
Classification (or Categorization) and Symbolization 345
User Selection of Classes 347
A More Careful Look at Equal Intervals 348
Defined Interval 349
Quantiles 349
Standard Deviation 349
Natural Breaks 349
Normalization 350
Using Charts and Graphs 351
Making a Layout 351

EXERCISE 6-3 (SHORT PROJECT)

Comparing Data Sets: Medically Underserved Areas (MUAs) and Health Professional Shortage Areas (HPSAs) 351
Geographically Comparing Two Data Sets 353

EXERCISE 6-4 (PROJECT)

Combining Demographic and Geographic Data 355
Getting TIGER-Based Street and Block Shapefiles from ESRI 356
Obtaining Data from the U.S. Bureau of the Census 357
Converting the Data Spreadsheet to dBASEIV Format 358
Assessing What We Have and What We Need to Solve the Problem 361
Converting the Relevant Files to Cartesian Coordinates 362
Finally 363

EXERCISE 6-5

Determining Proximity of Points to Points and Lines **364**

EXERCISE 6-6 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File **366**

CHAPTER 7 **Creating Spatial Data Sets Based on Proximity, Overlay, and Attributes** **369**

OVERVIEW **369**

Generating Features Based on Proximity: Buffering 369

Generating Features by Overlaying 371

Overlaying with Line and Point Feature Classes 373

Spatial Joins in General 375

Deriving Geodata Sets by Selecting Attributes: Extraction 376

STEP-BY-STEP

EXERCISE 7-1 (WARM-UP)

Making a Trivial Buffer Around a Trivial Feature Class **379**

EXERCISE 7-2 (PROJECT)

Exploring PGDBFC Buffers with the Wildcat Boat Data **380**

Using ArcMap to Make Buffer Zones Around the Roads 381

Variable-Width Buffers 382

EXERCISE 7-3 (PROJECT)

Manipulate Polygon Feature Classes with Union and Extract **383**

Making a New Feature Class from a Subset of Polygons: Extract 387

More Complex Queries—AND's and OR's 389

Other Polygon Spatial Joins: Intersect and Identity 389

EXERCISE 7-4 (PROJECT)

Using Overlay with Trivial Point and Line Feature Classes **390**

EXERCISE 7-5 (PROJECT)

Using Buffer and Overlay with Geodatabases **392**

The Getrich Saga 392

Deriving Information by Combining Tables 394

Overlaying the Feature Classes 396

EXERCISE 7-6 (PROJECT)

Building a Model of the Getrich Project Solution **398**

EXERCISE 7-7 (MINOR PROJECT)

Making Buffers for Solving the Wildcat Boat Problem **402**

EXERCISE 7-8 (PROJECT)

Finding a Site for the Wildcat Boat Facility **403**

EXERCISE 7-9 (PROJECT OPTIONAL)

Solving a Revised Wildcat Boat Problem **406**

Understanding Dissolve 407

Making New Sites Including the COST_HA Field 408

Considering the Eccentricity Criterion 408

EXERCISE 7-10 (PROJECT)

Making a Model of the Wildcat Boat Solution **410**

EXERCISE 7-11 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File **411**

CHAPTER 8 **Spatial Analysis Based on Raster Data Processing** **413**

OVERVIEW **413**

A Different Storage Paradigm 413
Facts About Rasters 415
Coordinate Space 415
Rasters with Integer Cell Values 416
Rasters with Floating-Point Values 420
What Is Raster Storage and Processing Good For? 420
Rasters and Features 421
Rasters: Input, Computation, and Output 422
Where Raster Processing Shines: Cost Incurred Traveling over a Distance 422
Proximity Calculation with Rasters 423
Human Activity, Cost, and Distance 423
Euclidian Distances on the Grid 424
Euclidean Distance and the Spatial Analyst 425
Proving Pythagoras Right 426
Multiple Source Cells 427
Finding the Closest of Many Source Cells 427
Excluding Distances Beyond a Certain Threshold 427
Other Factors That Influence Cost 428
The Cost-Distance Mechanism 428
The Cost-Distance Calculation 429
Path Calculation in Euclidian Distance and Cost Distance 430
Understanding How Total Costs Are Calculated 431
Getting More Information: Paths and Allocations 432
Direction and Allocation Grids for Euclidian Distance 432
Direction and Allocation Grids for Cost Distance 432
A Major Application of Raster Processing: Hydrology 433
Basic Surface Hydrology 434
How Spatial Analyst Performs Hydrologic Analysis 434
Basic Surface Hydrology Concepts 434
Calculating Flow Direction 435
The Ultimate Destination of Water Is off the Raster Area 436

Flow Accumulation: Drainage Delineation and Rainfall Volume 437
Calculating the Length of a Potential Linear Water Body 439
Assigning Identities to Streams 440
Vector vs. Raster Representation 440
Assigning Orders to Stream Links 441
Watersheds and Pour Points 442

STEP-BY-STEP 445

EXERCISE 8-1 (PROJECT)

Basic Raster Principles and Operations 445
The Raster Calculator—Integer Rasters 448
Arithmetic Calculation 448
Boolean Operations 449
Floating-Point Rasters 450

EXERCISE 8-2 (PROJECT)

Solving the Original Wildcat_Boat Problem with Rasters 451
Setting the General and Raster Environment 452
Converting Features to Rasters 453
Creating Rasters for Sewers, Streams, and Roads 455
Buffering with Spatial Analyst (Maybe) 457
Buffering—Plan B 458
Reclassifying the Data 459
Adding the Rasters with the Raster Calculator 460
Converting Zones to Regions 461

EXERCISE 8-3 (PROJECT)

Solving a Wildcat_Boat Problem with Different Requirements 462

EXERCISE 8-4 (DEMONSTRATION)

Making Surfaces with IDW, Spline, Trend, Nearest Neighbor, and Kriging 463

Points and Density 466
Thiessen, Dirichlet, Voronoi, (and, of course, Decartes) 466

EXERCISE 8-5 (PROJECT)

GRIDS: Distance and Proximity 467
Making a Grid Showing Straight-Line Distances to a Single Place 467
Examining Many Source Cells and the Capping Distance 470
Developing a Grid with Cost Distance 471
Creating Direction and Allocation Grids 472
Using Cost Distance to Make Direction and Allocation Grids 475
Calculating a Least-Cost Path 476

EXERCISE 8-6 (PROJECT)

Putting the Tools Together: Site a Regional Park 477
Setting Things Up 478
Preparing to Create a Cost Surface 480
Building a Cost Surface 481
Improving the Understandability of the Map 482

EXERCISE 8-7 (PROJECT)

Watershed Analysis 483
Examining the surface with Various Spatial Analyst Tools 484
Determining the Stream Channels 486
Calculating Steam Order 486
Numbering Each Stream Individually 487
Identifying Basins 487
Finding Pollution Culprits 487

EXERCISE 8-8 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File 488

CHAPTER 9 Other Dimensions, Other Tools, Other Solutions 491
Ignored Third Dimensions: The Temporal and the Vertical Spatial 491

THE THIRD SPATIAL DIMENSION: OVERVIEW **493**

3-D: 2-D (Spatial) Plus 1-D (Spatial) 493

ArcScene 493

ArcGlobe 494

THE THIRD SPATIAL DIMENSION: STEP-BY-STEP **495**

A New Software Package: ArcScene 495

EXERCISE 9-1 (PROJECT)

Experimenting with 3-D **495**

ArcScene 496

What's 3-D and What's Not 497

Viewing 3-D Data with Animation 500

Making a TIN and Other 3D Representations of Elevation 503

Creating DEM files with Kriging 505

Creating a Contour Map 506

Two-and-a-Half-D: Calculating Volumes 506

Calculating a Volume with ArcGIS 507

Other Neat Stuff You Can Do with 3D Analyst: Viewshed and Hillshade 509

Adding Data to ArcGlobe 510

Making a Terrain 512

THE TIME DIMENSION: OVERVIEW **519**

3-D: 2-D (Spatial) Plus 1-D (Temporal) 519

THE TIME DIMENSION: STEP-BY-STEP **521**

EXERCISE 9-2 (PROJECT)

Looking at Infrastructure Changes Occurring over Time **521**

ADDRESS GEOCODING: OVERVIEW **525**

A Second Fundamental Way of Defining Location 525

TIGER/Line Files 526

Precision of the Geographic Coordinates in TIGER Files 528

Address Locators 529

ADDRESS GEOCODING: STEP-BY-STEP 531

EXERCISE 9-3 (PROJECT)

Experimenting with Addresses and Coordinates 531

Finding the Geographic Position of an Address "Manually" 532

Making an Address Locator 533

Finding the Geographic Position of an Address "Automatically" 534

TIGER Files and Zip Codes 534

More to Know—More Information Available 535

ANALYSIS OF NETWORKS: OVERVIEW 537

ANALYSIS OF NETWORKS: STEP-BY-STEP 539

EXERCISE 9-4 (PROJECT)

Experimenting with Routes and Allocations 539

Finding the Shortest Route to a Facility 543

Allocating Territories to Facilities 543

LINEAR REFERENCING: OVERVIEW 547

LINEAR REFERENCING: STEP-BY-STEP 549

EXERCISE 9-5 (PROJECT)

Experimenting within Linear Features 549

Intersecting Route Events 552

What's Not Covered Here 554

EXERCISE 9-6 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File 554

Afterword: From Systems to Science 557

Index 559
