

Contents

Preface ix

Acknowledgements xi

- 1. An Introduction to Methods for Studying Visual Cognition** 1
 - Overview of the book 1
 - Characteristics of the different methodologies 3

- 2. Seeing Static Forms** 9
 - Introduction 9
 - What is perceived? 9
 - Derivation of the primal sketch 22
 - Inferring surface structure from retinal images 37
 - The 2½ D sketch representation of viewer-centred information:
 - An introduction to “connectionist” models 45

- 3. Visual Object Recognition** 51
 - Introduction 51
 - Different levels of object “description” 52
 - Templates, features, and structural descriptions 60
 - Reference frames 64
 - Theories of object recognition 66
 - Connectionist accounts of object recognition 83
 - Specific recognition modules: The case from face recognition 88
 - Visual context effects in object recognition 95

4. Dynamic Aspects of Vision	103	
Movement perception	103	
Deficits in movement perception	109	
Visual masking	110	
Processing mechanisms in visual masking	118	
Higher-level processes in visual masking	132	
Masking and conscious perception	137	
5. Visual attention	143	
Visual attention as a spotlight	143	
The spread and division of the spotlight	145	
Gradients of attention	147	
Attentional zoom lens or spotlight?	148	
Separating the zoom lens and the spotlight accounts: moving attention	150	
Attention and eye movements	154	
Attention to central and peripheral stimuli	157	
Disorders of visual attention: Unilateral visual neglect	158	
Spatial or object-based attention?	167	
Attention and object recognition	170	
Feature integration theory	173	
Some problems for feature integration theory	179	
Summary	190	
6. Visual Memory and Imagery	191	
Introduction	191	
Iconic memory	192	
Post-iconic, short-term visual memory	194	
Visual imagery	203	
Disorders of visual imagery	210	
Long-term visual memory	216	
Eyewitnessing	223	
7. Visual Processing in Reading	227	
Introduction	227	
The evolution of writing systems	227	
Preliminary issues: Processing "routes" and different tasks	230	
Effects on the derivation of phonology	232	
Effects in search, letter recognition, and matching	235	
Word-level representation: Whole form or parallel letter analysis	241	
Modelling word recognition	241	
Acquired disorders of reading	247	
Word processing and visual attention	255	
Linguistic constraints on visual processing	259	

Context effects on visual processing	263
Eye movements in reading	273
Reading without eye movements: Rapid serial visual presentation	284
Words and objects: A coda	284
