|--|-----------|
| 1 Introduction | 1 |
| 2 Photosensitive epilepsy | 3 |
| 2.1 Introduction | 3 |
| 2.1.1 The epilepsies: cause and localization | 3 |
| 2.1.2 The clinical EEG examination in photosensitive epilepsy | 4 |
| 2.2 The visual stimulation that causes seizures | 7 |
| 2.2.1 Flicker | 7 |
| 2.2.2 Pattern | 9 |
| 2.2.3 Viewing conditions | 21 |
| 2.2.4 Common environmental stimuli | 23 |
| 2.2.5 Measuring susceptibility – theoretical implications | 24 |
| 2.3 Inferences regarding the seizure mechanism | 24 |
| 2.3.1 Pattern-induced epilepsy starts in the visual cortex | 25 |
| 2.3.2 The epilepsy involves one cerebral hemisphere or both hemispheres independently | 27 |
| 2.3.3 The seizures are started by normal physiological excitation | 28 |
| 2.3.4 The seizures start when physiological excitation involves more than a critical cortical area | 29 |
| 2.3.5 The seizures are most likely when cortical excitation is rhythmic | 31 |
| 2.3.6 Sodium valproate prevents the spread of the discharge | 34 |
| 2.3.7 Underlying pathophysiology | 36 |
| 3 Illusions and headaches | 38 |
| 3.1 Anomalous visuo-perceptual effects | 38 |
| 3.2 Origin of the anomalous perceptual effects | 39 |
| 3.3 Links between illusions and seizures | 41 |
| 3.3.1 Patterns | 41 |
| 3.3.2 Flicker | 43 |
| 3.4 Illusions and discomfort | 47 |
| 3.5 Illusions and headaches | 47 |
| 3.5.1 Headache frequency | 47 |
| 3.5.2 Time of occurrence | 49 |
| 3.5.3 Types of headache | 49 |
| 3.5.4 Unilateral illusions | 51 |
| 3.6 Underlying pathophysiology | 52 |
| 3.7 Illusions and other bodily differences | 54 |

| | |
|--|-----|
| 4 Strong stimulation | 56 |
| 4.1 Sensory thresholds | 56 |
| 4.2 Suprathreshold stimuli | 58 |
| 4.3 Aggregate neuronal response | 60 |
| 5 Reading | 66 |
| 5.1 Text as a striped pattern | 67 |
| 5.2 Measuring the 'stripes' of text | 67 |
| 5.3 Extending the measurements to two dimensions | 71 |
| 5.4 Anomalous visual effects, eye-strain, and text clarity | 73 |
| 5.5 Preventing eye-strain, headaches, and seizures | 75 |
| 5.6 Improving text without increasing costs | 79 |
| 5.7 Alternative explanations | 81 |
| 6 Lighting | 83 |
| 6.1 Characteristics of electric lighting | 83 |
| 6.2 Pulsating discharge | 84 |
| 6.3 Luminaires and depth of pulsation | 84 |
| 6.4 Varieties of fluorescent lamps | 86 |
| 6.5 Modulation | 88 |
| 6.6 Physiological consequences of the pulsation in light | 89 |
| 6.6.1 Flicker 'fusion' | 89 |
| 6.6.2 Subcortical response to fluorescent lighting | 90 |
| 6.6.3 Eye movements | 91 |
| 6.7 Links with headaches and eye-strain | 92 |
| 6.7.1 Electrophysiological evidence | 92 |
| 6.7.2 A survey of office workers | 92 |
| 6.8 Links with agoraphobia | 96 |
| 6.9 Physiological mechanisms for discomfort | 97 |
| 6.10 Remedial measures | 99 |
| 6.10.1 Tinted lenses for fluorescent lighting? | 99 |
| 6.11 Spatial layout of lighting | 103 |
| 7 Electronic displays | 104 |
| 7.1 Television | 104 |
| 7.2 Television epilepsy | 105 |
| 7.3 Implications for treatment | 107 |
| 7.4 Television headaches | 108 |
| 7.5 Computer displays | 109 |
| 7.6 Saccadic suppression | 109 |
| 7.7 Corrective saccades | 110 |

| | | |
|-----------|---|------------|
| 7.8 | Modulation depth | 111 |
| 7.9 | Visibility of flicker | 111 |
| 7.10 | Precision of eye movement in relation to task performance | 112 |
| 7.11 | Prevention of discomfort | 114 |
| 8 | Design | 116 |
| 8.1 | Stripes are everywhere | 116 |
| 8.2 | Effects of striped designs | 117 |
| 8.3 | Deliberate design and modular construction | 124 |
| 8.4 | Convenience versus necessity | 125 |
| 8.5 | Natural images | 127 |
| 8.6 | Lighting design | 128 |
| 9 | Colour as therapy | 130 |
| 9.1 | Extravagant claims | 130 |
| 9.2 | Perceptual distortion of text and the effects of colour | 132 |
| 9.3 | An Intuitive Colorimeter | 134 |
| 9.4 | Colorimeter: preliminary findings | 137 |
| 9.5 | Comparison of techniques | 141 |
| 9.6 | Therapeutic precision tinting: lenses and dyes | 142 |
| 9.7 | Therapeutic precision tinting: assessment and tinting procedure | 144 |
| 9.8 | Therapeutic precision tinting: initial clinical results | 146 |
| 9.8.1 | Case histories | 146 |
| 9.8.2 | Open trial | 147 |
| 9.9 | Placebo-controlled trial | 148 |
| 9.9.1 | Selection of subjects | 149 |
| 9.9.2 | Chromaticities of the lenses | 149 |
| 9.9.3 | Relief of symptoms | 150 |
| 9.10 | Open trials in photosensitive epilepsy | 152 |
| 9.11 | Overlays | 154 |
| 9.12 | A physiological basis for the benefits of coloured tints? | 155 |
| 10 | Speculation | 159 |
| 10.1 | Visual physiology | 159 |
| 10.1.1 | Excitatory connections between columns | 159 |
| 10.1.2 | The magnocellular and parvocellular pathways | 160 |
| 10.1.3 | Migraine and metabolic demand | 163 |
| 10.1.4 | Pain as a response to visual stimuli | 164 |
| 10.2 | Computational vision | 164 |
| 10.2.1 | Grouping of the image | 164 |
| 10.2.2 | Efficiency of signal transmission on luminance and colour-difference channels | 166 |
