

Contents

1	Introduction	1
1.1	A World of Optimization	1
1.2	Modeling and Efficiency	2
1.3	Contribution	3
1.3.1	Outline and Major Results	4
1.3.2	Background	6
1.3.3	Publications	6
 Part I — Methods		
2	Optimization Constraints	11
2.1	Definitions and General Observations	11
2.1.1	On the Complexity of Cost-based Domain Filtering Problems	12
2.1.2	Degrees of Consistency	13
2.2	Shortest Path Constraints	15
2.2.1	Definition	16
2.2.2	Shortest Path Problems on DAGs	18
2.2.3	Shortest Path Problems on Undirected Graphs	21
2.2.4	Shortest Path Problems on Directed Graphs	27
2.2.5	Summary	32
2.3	Weighted Stable Set Constraints on Interval Graphs	33
2.3.1	The Weighted Stable Set Constraint	34
2.3.2	A Mathematical Programming Approach	34
2.3.3	Cost-based Filtering	42
2.4	Weighted All Different Constraints	46
2.4.1	The Minimum Weight All-Different Constraint	46
2.4.2	An Arc-Consistency Algorithm	48

2.5	Knapsack Constraints	53
2.5.1	Definition and Applications	53
2.5.2	Knapsack Relaxations	56
2.5.3	Cost-based Filtering for Knapsack Constraints	59
2.5.4	Experiments	62
2.5.5	Cost-based Filtering for Knapsack Related Problems	69
2.5.6	Summary	70
3	Cost-based Filtering and Problem Decomposition	71
3.1	CP-based Column Generation	73
3.2	CP-based Lagrangian Relaxation	75
3.3	Remarks and Generalizations	78
3.3.1	Solving the Lagrangian Dual and Impotence	78
3.3.2	Redundant Constraint Generation	78
3.3.3	Linking more than Two Optimization Constraints	79
3.3.4	Linear Relaxations and Cuts	79
3.3.5	Binary IPs	79
3.3.6	Column Generation vs. Lagrangian Relaxation	80
4	Symmetry Breaking	81
4.1	Symmetry Breaking by Dominance Detection	82
4.1.1	Efficient Realization in a Depth First Search	84
4.1.2	Arbitrary Search Strategies	84
4.1.3	A Different Representation of Choice Points	85
4.2	DeBruijn Graph Bisection	86
4.2.1	Bisection Width of the DeBruijn Graph	87
4.2.2	Symmetry Breaking for the Bisection of DeBruijn Graphs	87
4.3	The Social Golfer Problem	88
4.3.1	Symmetries in the Social Golfer Problem	89
4.3.2	Symmetry Breaking for the Social Golfer Problem	89
4.3.3	Numerical Results	90
4.4	The n -Queens Problem	93
4.4.1	Symmetry Breaking for the n -Queens Problem	93
4.4.2	Numerical Results	94
4.5	Summary	95

Part II — Applications

5	Airline Crew Assignment	99
5.1	The Airline Crew Assignment Problem	100
5.2	Two Approaches for the Crew Assignment Problem	101
5.2.1	CP-based Column Generation Approach	102
5.2.2	Heuristic Tree Search Approach	107
5.3	Integration	109
5.3.1	The Airline Test Cases	109
5.3.2	Transforming a Set Covering into a Set Partitioning Solution	110
5.3.3	Generating Combinable Columns and Exploiting Dual Values	113
5.4	Numerical Results	116
5.5	Summary	119
6	Automatic Recording	121
6.1	The Automatic Recording Problem	121
6.1.1	On the Complexity of the Automatic Recording Problem	123
6.1.2	A Mathematical Programming Formulation	124
6.1.3	Solving the Resulting Integer Linear Program	124
6.2	CP-based Lagrangian Relaxation for the ARP	125
6.2.1	Implementation Details	126
6.3	Numerical Results	127
6.3.1	Test Instance Generation	127
6.3.2	Experimental Evaluation	128
6.4	Summary and Future Work	132
7	Capacitated Network Design	133
7.1	The Capacitated Network Design Problem	133
7.1.1	State of the Art	134
7.2	Lagrangian Relaxation Bounds	136
7.2.1	Shortest Path Relaxation	136
7.2.2	Knapsack Relaxation	137
7.2.3	Subgradient Optimization	137
7.2.4	Variable Fixing	138
7.2.5	Lagrangian Cardinality Cuts	141

7.3	A Branch & Bound Algorithm	143
7.4	Numerical Results	143
7.4.1	Benchmark Data	144
7.4.2	Algorithm Variants Considered in the Experiments	144
7.4.3	Evaluation	145
7.5	Summary and Future Work	148
8	The Social Golfer Problem	151
8.1	Definition	152
8.2	Another SBDD-Approach for the Social Golfer Problem	153
8.3	Heuristic Constraint Propagation	154
8.3.1	Literature on the Integration of CP and Local Search	155
8.3.2	Horizontal Constraints	157
8.3.3	Vertical Constraints	160
8.4	Numerical Results	163
8.5	Summary	165
9	Graph Bisection	167
9.1	The Graph Bisection Problem	168
9.2	Bounds on Graph Bisection	169
9.3	Approximation of the VarMC-bound	170
9.3.1	The FPTAS	171
9.3.2	Implementation Details	177
9.4	Cost-Decomposition Approach	177
9.4.1	Column Generation	178
9.4.2	Lagrangian Relaxation Based Column Generation	179
9.5	A Branch & Bound Algorithm	181
9.6	Numerical Results	181
9.6.1	Approximating Lower Bounds	182
9.6.2	Lower Bounds using Cost-Decomposition	184
9.6.3	Comparison of Lower Bound Algorithms	184
9.7	Summary and Future Work	188
10	Conclusion	189
