List of contributors	xiii
<b>1. Introduction to auditory cognition</b>	<b>1</b>
<i>Stephen McAdams and Emmanuel Bigand</i>	
1.0 What is cognitive in audition?	1
1.1 The current state of auditory cognition research	3
1.2 Organization of the book	5
References	9
<b>2. Auditory scene analysis: hearing in complex environments</b>	<b>10</b>
<i>Albert S. Bregman</i>	
2.0 Introduction	10
2.1 Scene analysis in audition	11
2.1.1 Using general acoustic regularities	14
2.2 Effects of auditory scene analysis on perception	15
2.3 Multiple bases for segregation	23
2.4 Differences in spatial location	26
2.5 Synchronized frequency changes	30
2.6 Physiological limitations	32
2.7 Conclusions	32
References	34
<b>3. Perception of acoustic sequences: global integration versus temporal resolution</b>	<b>37</b>
<i>Richard M. Warren</i>	
3.0 Introduction	37
3.1 Basic concepts	38
3.1.1 Identification of order	38
3.1.2 Holistic pattern recognition	42
3.1.3 Distinguishing between the two types of sequence perception	47
3.2 Application of basic concepts	50
3.2.1 Tone sequences and melodies	50
3.2.2 Phonetic sequences and their perceptual organization	55
3.3 Cross-species comparisons	62
3.4 Summary and conclusions	63
References	64

<b>4. Attending to auditory events: the role of temporal organization</b>	69
<i>Mari Riess Jones and William Yee</i>	
4.0 Introduction	69
4.0.1 What is attention?	69
4.0.2 Tasks	70
4.1 Current approaches to attending	71
4.1.1 General theories of attention	71
4.1.2 Contemporary approaches to attending to auditory events	74
4.2 Current issues in attending to auditory events	84
4.2.1 Attending to auditory events	86
4.2.2 Attending to musical events	95
4.2.3 Attending to speech	101
4.3 Conclusions	105
Acknowledgements	105
References	106
<b>5. Auditory memory</b>	113
<i>Robert G. Crowder</i>	
5.0 Introduction	113
5.0.1 Memory and knowledge	113
5.0.2 The storage and procedural attitudes about memory	114
5.1 Auditory retention in short-term verbal memory	117
5.2 Auditory backward recognition masking	120
5.3 Same/different pitch comparisons in pairs of tones	122
5.4 Memory for melody	126
5.4.1 Melodies in auditory knowledge	126
5.4.2 Comment on priming	128
5.4.3 Episodic memory for new melodies: recall	129
5.4.4 Episodic memory for new melodies: recognition	130
5.4.5 Implicit memory for unfamiliar melodies	133
5.5 Memory and imagery for musical timbre	134
5.5½ Memory for speaker's voice	138
5.5½.1 Implicit memory for speaker's voice in word recognition	138
5.5½.2 Explicit recognition of unfamiliar voices	139
5.6 Concluding summary: dimensions of auditory memory	140
References	140

<b>6. Recognition of sound sources and events</b>	146
<i>Stephen McAdams</i>	
6.0 Introduction	146
6.1 Stages of processing in auditory recognition	149
6.1.1 Peripheral auditory representation of the acoustic signal	150
6.1.2 Auditory grouping processes	151
6.1.3 Analysis of auditory properties and features	152
6.1.4 Matching auditory properties to memory representations	153
6.1.5 Activation of the verbal lexicon and associated semantic structures	154
6.1.6 Interactions between stages of processing	155
6.2 Important issues in auditory recognition research	155
6.2.1 Auditory input representations	156
6.2.2 Long-term memory representations	156
6.2.3 Matching auditory to memory representations	157
6.3 Experiments on perception and recognition of sound sources and events	157
6.3.1 Experimental tasks used to study source and event perception	158
6.3.2 Musical instruments	162
6.3.3 Natural acoustic events other than speech and musical sounds	174
6.3.4 Discussion of the experimental evidence	179
6.4 Survey of relevant recognition models	184
6.4.1 Perceptual representations	184
6.4.2 Memory representations	189
6.4.3 The matching process	192
6.5 Conclusions	193
Acknowledgements	194
References	195
<b>7. Auditory agnosia: a functional analysis</b>	199
<i>Isabelle Peretz</i>	
7.0 Introduction	199
7.1 Cerebral organization	200
7.2 Functional organization	203
7.3 Auditory agnosia	205
7.3.1 Auditory recognition: a two-stage process	206
7.3.2 Specific recognition systems	210
7.3.3 The case of music	212
7.4 Comments and outlook	226
Acknowledgements	226
References	226

<b>8. Contributions of music to research on human auditory cognition</b>	231
<i>Emmanuel Bigand</i>	
8.0 Introduction	231
8.1 Abstract musical knowledge structures	233
8.1.1 Knowledge of tonal hierarchies	234
8.1.2 Lexicon of schemas	242
8.2 Event structure processing	246
8.2.1 Time-span segmentation	247
8.2.2 Establishing an event hierarchy	253
8.2.3 Perception of patterns of musical tension and relaxation	263
8.3 Symbolization processes	270
8.4 Conclusion	271
Acknowledgements	273
References	273
<b>9. Listening strategies in infancy: the roots of music and language development</b>	278
<i>Sandra E. Trehub and Laurel J. Trainor</i>	
9.0 Introduction	278
9.0.1 Selecting the naïve listener	280
9.0.2 Selecting the stimuli	280
9.0.3 The test procedure	282
9.1 Grouping	284
9.2 Melody perception: pitch contour	288
9.3 Musical structure: defining <i>good</i> patterns	296
9.4 <i>Good</i> contexts: key relations	305
9.5 <i>Good</i> scales	308
9.6 <i>Good</i> changes to <i>good</i> patterns	310
9.7 Conclusion	312
Acknowledgements	317
References	317
Glossary	328
Name index	342
Subject index	349
