Preface	xi
PART I. THE NATURE OF INTELLIGENCE AND ITS MEASUREMENT	
1 Conceptions of intelligence	3
<i>Robert J. Sternberg and William Salter</i>	
1.1 Cognition, personality, and intelligence	3
1.2 Society, culture, and intelligence	15
1.3 The phylogeny and ontogeny of intelligence	21
1.4 Conclusion	24
2 The measurement of intelligence	29
<i>John B. Carroll</i>	
2.1 The period of development	31
2.2 The modern period	58
2.3 Review and assessment: the current scene	94
PART II. COGNITION, PERSONALITY, AND INTELLIGENCE	
3 Attention, perception, and intelligence	123
<i>Lynn A. Cooper and Dennis T. Regan</i>	
3.1 Basic information-processing skills underlying psychometric measures of ability	124
3.2 The role of strategies and attention in individual differences in ability	150
3.3 Concluding remarks	162
4 Learning, memory, and intelligence	170
<i>William K. Estes</i>	
4.1 Introduction	170
4.2 Learning and learning theory	173
4.3 Memory and information processing	191
5 Reasoning, problem solving, and intelligence	225
<i>Robert J. Sternberg</i>	
5.1 A metatheoretical framework for theory and research on reasoning and problem solving	227
5.2 Reasoning and intelligence	235
5.3 Problem solving and intelligence	270
5.4 Reasoning, problem solving, and intelligence	295

6	Personality and intelligence	308
	<i>Jonathan Baron</i>	
6.1	Reflective thinking and intelligence	308
6.2	Implications for personality theory	320
6.3	Implications for the study of intelligence	331
6.4	Conclusion	344
7	Artificial and human intelligence	352
	<i>Natalie Dehn and Roger Schank</i>	
7.1	Introduction	352
7.2	From machine intelligence to human intelligence research	352
7.3	The role of the computer program in human-intelligence-oriented artificial intelligence	356
7.4	Issues and approaches of early artificial intelligence	357
7.5	Issues of human intelligence as seen from current artificial intelligence	365
7.6	Implications of artificial intelligence for issues in the psychology subfield of intelligence	383
7.7	Summary	386
8	Mental retardation and intelligence	392
	<i>Joseph C. Campione, Ann L. Brown, and Roberta A. Ferrara</i>	
8.1	Introduction	392
8.2	General framework	398
8.3	Selective review of the experimental literature	400
8.4	Clinical assessments of learning potential	437
8.5	Implications for a theory of intelligence	452
8.6	Suggestions for future research	473

PART III. SOCIETY, CULTURE, AND INTELLIGENCE

9	Education and intelligence	493
	<i>Richard E. Snow in collaboration with Elanna Yalow</i>	
9.1	The goals of education and of educational research	493
9.2	Intelligence in education through history	497
9.3	Continuing issues and a theoretical framework	513
9.4	Current evidence and current research	523
9.5	Summary and speculations about the future	559
10	Social policy and intelligence	586
	<i>Edward Zigler and Victoria Seitz</i>	
10.1	Preliminary considerations	587
10.2	Recommendations	593
10.3	Conclusions	632
11	Culture and intelligence	642
	<i>Laboratory of Comparative Human Cognition</i>	
11.1	Introduction	642
11.2	Early approaches	646

11.3	The eco-cultural framework	650
11.4	Cognitive styles	657
11.5	Cognitive universals: Piaget	663
11.6	Reexamining basic assumptions	673
11.7	Context-specific approaches	675
11.8	Context specificity and cultural differences	675
11.9	Reorienting the discussion	692

PART IV. THE PHYLOGENY AND ONTOGENY OF INTELLIGENCE

12	The evolution of biological intelligence <i>Harry J. Jerison</i>	723
12.1	History and philosophy	724
12.2	On evolutionary theory	737
12.3	On intelligent behavior	748
12.4	Encephalization and intelligence	766
12.5	Conclusion	782
13	Genetics and intelligence <i>Sandra Scarr and Louise Carter-Saltzman</i>	792
13.1	Introduction	792
13.2	Molecular and population genetics	802
13.3	Analyses of variation in human intelligence	817
13.4	Twin and family studies	823
13.5	Separate cognitive abilities	865
13.6	The implications of intellectual diversity and genetic differences for improving intelligence	879
14	The development of intelligence <i>Robert S. Siegler and D. Dean Richards</i>	897
14.1	The psychometric approach to intellectual development	901
14.2	The Piagetian approach to intellectual development	909
14.3	Information-processing approaches to development	920
14.4	The development of learning skills	946
14.5	Some large, unresolved issues	960

PART V. METATHEORY OF INTELLIGENCE

15	Theories of intelligence <i>Robert J. Sternberg and Janet S. Powell</i>	975
15.1	Forms of theories of intelligence	975
15.2	The evolution of theories of intelligence	981
15.3	Limits of theories of intelligence	991
15.4	Summary and conclusions	1000

Name index	1007
Subject index	1027
