1	Approaches to the analysis of the neural bases of memory	1
1.1	Memory and habituation	3
1.1.1	Some behavioural characteristics of habituation	3
1.1.2	Physiological analysis	3
1.1.3	Cellular mechanisms	12
1.1.4	Possible neuronal networks for habituation	20
1.1.5	Comment	24
1.2	The characteristics of filial imprinting	26
1.3	Summary	27
	References	28
2	Biochemical consequences of imprinting	34
2.1	Protein metabolism	35
2.2	RNA metabolism	43
2.3	Some ambiguities of interpretation	45
2.4	Summary	46
	References	46
3	Real effects of learning?	48
3.1	Dividing the brain	49
3.2	Controlling for some effects of sensory stimulation	55
3.3	Biochemical and behavioural variations	61
3.4	Comment	65
3.5	Summary	65
	References	66
4	Cerebral localization	69
4.1	Probing with radioactive uracil	70
4.2	Probing with radioactive 2-deoxyglucose	78
4.3	Some unanswered questions	80
4.4	Summary	81
	References	81
5	Brain lesions, acquisition, and retention	83
5.1	Lesions to the IMHV, and the acquisition of a preference	83
5.2	Lesions to the IMHV, and the retention of a preference	88
5.3	One IMHV for acquisition and retention	94

5.4 Other lesions studies	98
5.5 Evaluating the evidence of lesion studies	101
5.6 Summary	104
References	104
6 Imprinting and associative learning	107
6.1 Working for a reward of warm air	107
6.2 Working for a view	110
6.3 Recognition memory and associative learning	115
6.4 Is there a special relationship between imprinting and the IMHV?	118
6.5 Summary	126
References	126
7 How many stores? Cerebral asymmetry and imprinting	129
7.1 Sequential lesion studies	129
7.2 Modification of hemisphere function	137
7.2.1 A neuronal model	140
7.3 How many stores and what are they for?	143
7.4 Lesions, motivation, and stimulus–response pathways	147
7.5 Summary	148
References	148
8 Predispositions and preferences	151
8.1 Brain lesions and preferences	152
8.2 Behavioural analysis of preferences	156
8.2.1 Interaction between acquired preferences and predispositions	157
8.2.2 Conditions for the emergence of a predisposition	162
8.3 Predisposition to what?	166
8.4 What role for the IMHV in the preference for the jungle-fowl?	169
8.4.1 Emerging preferences	169
8.4.2 Recognition of individuals	169
8.5 S' and the jungle-fowl	172
8.6 Summary	172
References	173
9 Physiological constraints on memory and imprinting	175
9.1 Effects of stimulating the brain	175
9.2 Effects of age and visual experience on catecholamine levels in parts of the chick forebrain	181
9.3 Noradrenaline and imprinting	183
9.4 Testosterone and imprinting	188
9.5 Double dissociation	193
9.6 Comment and speculation	194

9.7 Summary	196
References	197
10 Physiological and morphological consequences of training	201
10.1 Physiological consequences of training	202
10.2 Morphological consequences of training	204
10.3 Comment and speculation	213
10.3.1 Specific or non-specific consequences of training?	213
10.3.2 Correlations	214
10.3.3 Functions of dendritic spines	215
10.3.4 Constraints on synaptic modification	216
10.3.5 Cellular mechanisms	218
10.3.6 Presynaptic and postsynaptic changes	221
10.3.7 Functional validation	225
10.4 Summary	225
References	226
11 A structure for memory?	231
11.1 The connections of the IMHV	231
11.1.1 Connections with sensory systems and the brainstem core	233
11.1.2 Connections with descending control systems	241
11.1.3 Connections with systems involved in agonistic behaviour and the expression of emotions	243
11.2 Chemical and cellular components of the IMHV	246
11.2.1 Neuroactive substances	246
11.2.2 Cellular organization	249
11.3 Comment and speculation: cerebral circuits in birds and mammals	250
11.4 Summary	254
References	254
12 Towards a synthesis	260
12.1 Memory	260
12.1.1 Neuropsychological and neuroethological approaches	260
12.1.2 Neurophysiological aspects	265
12.2 Imprinting	270
12.2.1 Sensitive periods in imprinting and the development of the visual cortex	270
12.2.2 Predispositions and acquisitions	274
12.3 Summary	276
References	276

Appendix: A sketch of the avian brain with particular reference to the domestic chick	280
A.1 General form of the chick brain	281
A.2 Internal structure of the telencephalon	283
A.3 Sensory systems	286
A.3.1 The visual system	286
A.3.2 The auditory system	288
A.3.3 The somatic sensory system	290
A.3.4 The olfactory system	291
A.4 Projections of the brainstem core	291
A.5 Descending pathways from the cerebral hemispheres	295
A.6 Summary	297
References	297
Author index	303
Subject index	311
