1	Introduction and Motivation	11
1.1	Silicon structures with new physical properties	11
1.2	Outline	14
2	Theory of many electron systems	17
2.1	Hartree-Fock Theory	17
2.2	Density-functional Theory	21
2.2.1	Approximations for the Exchange-Correlation Energy	24
2.2.2	Basis Set Expansion of the Kohn-Sham orbitals	25
2.3	Density-functional based Tight-Binding method	26
3	Vibrational spectroscopy	31
3.1	Vibrational frequencies and normal modes	31
3.2	Infrared absorption and Raman scattering spectra	34
4	Structure of small silicon clusters	39
4.1	Identified ground-state structures for Si ₂ to Si ₈	39
4.2	Structure and energies of Si ₉ to Si ₁₄	43
4.3	Vibrational signatures of Si ₉ to Si ₁₄	48
5	Simulated Annealing	57
5.1	Simulated Annealing	57
5.2	Parameters used for Simulated Annealing	59
6	Shape transition for medium-sized clusters	63
6.1	Experimental indications of a shape transition	63
6.2	Stability of differently shaped clusters	66
6.3	Larger clusters with a bulk-like core	81

7 Vacancy clusters in silicon	85
7.1 Measurement and calculation of positron lifetimes	86
7.2 Computation of positron lifetimes	87
7.3 Experimental data on silicon vacancy clusters	88
7.4 Calculated stability and positron lifetimes	89
7.5 Linking theory and experiment	100
7.6 The simple and the extended bond-counting model	102
8 Conclusion	105
8.1 Summary	105
8.2 Outlook	107
A Calculation of the matrix elements	109
A.1 Contraction of the density and the wave-functions	109
A.2 Description of the electronic structure	116
B Short Summary of Group Theory	121
B.1 Basic Group Theory	121
B.2 Selection rules in IR- and Raman-spectroscopy	127
B.3 Si ₃ as an example	129
C Model annealing curves	131
C.1 Transition state theory	131
Bibliography	132
Danksagung	143

List of Figures

1.1	Diamond-like and disordered isomers of Si ₇₁	12
1.2	Vacancy clusters and their positron-lifetimes.	14
3.1	Illustration of the IR and Raman processes.	38
4.1	Raman-spectra and predicted structures of Si ₄ , Si ₆ , and Si ₇	41
4.2	HOMO–LUMO gaps and cohesive energies as a function of cluster size.	44
4.3	Low-energy isomers of Si ₉ to Si ₁₄	47
4.4	VDOS and simulated IR and Raman spectra of Si _{9a} and of Si _{11a}	51
4.5	VDOS and simulated IR and Raman spectra of Si ₁₀ (TTP and TCO).	53
4.6	VDOS and simulated IR and Raman spectra of Si _{12a} and of Si _{13b}	54
4.7	VDOS and simulated IR and Raman spectra of Si _{14a}	55
5.1	Temperature as a function of time during Simulated Annealing.	60
5.2	All initial configurations result in the Si ₇ (D _{5h}) geometry after SA.	61
5.3	Cluster after SA with high and with zero angular momentum.	62
6.1	Plot of inverse reduced mobilities vs. number of atoms.	65
6.2	Prolateness for the most stable isomers of Si ₂₅ , Si ₂₉ , and Si ₃₅	68
6.3	Measured drift-time distribution of cations Si _n ⁺ and anions Si _n ⁻	69
6.4	Distribution of shapes for isomers of Si ₂₅ , Si ₂₉ , and Si ₃₅	70
6.5	Most oblate and most prolate structures of Si ₂₅ , Si ₂₉ , and Si ₃₅	73
6.6	Low-energy isomers of Si ₂₅ with a large HOMO–LUMO gap.	74
6.7	HOMO–LUMO gap vs. prolateness of Si ₂₅ , Si ₂₉ , and Si ₃₅	75
6.8	Atom numbering for Si _{25A} and for Si _{25B}	77
6.9	Contribution of the atomic orbitals to the eigenstates of Si _{25A}	78
6.10	Contribution of the atomic orbitals to the eigenstates of Si _{25B}	79
6.11	Eigenvalues for Si _{25A} and Si _{25B}	80
6.12	Three isomers of Si ₇₁	81

6.13 Kohn-Sham eigenvalues for three isomers of Si ₇₁	81
6.14 Possible growth pattern for silicon clusters.	84
7.1 Atoms were successively removed from this hexagonal ring network.	89
7.2 Formation energies as a function of the number of vacancies. . . .	93
7.3 Bulk-fragment around V ₆	95
7.4 Bulk-fragment around V ₁₀	96
7.5 Electron density along the bond axis.	97
7.6 Bulk-fragment around V ₁₄	98
7.7 Energy and positron lifetimes.	100
A.1 Band-structure energy for two different wavefunction parameters. .	110
A.2 Band-structure energy for two different density parameters. . . .	111
A.3 DFTB band-structure energy and cohesive energy.	112
A.4 Polynomial used for the repulsive potential.	113
A.5 Cohesive energy of several bulk phases as calculated with DFTB. .	114
A.6 Matrix-elements as a function of internuclear distance.	115
A.7 Eigenvalues of Si ₅ as a function of nearest neighbor distance. . .	116
A.8 Eigenvalues of Si ₇ as a function of nearest neighbor distance. . .	117
A.9 Band-structure energies of the diamond and simple cubic phases. .	118
A.10 Silicon band-structure calculated with $r_d = 6.7 a_B$, $r_w = 3.30 a_B$. .	119
A.11 Silicon band-structure calculated with $r_d = \infty$, $r_w = 4.50 a_B$	119
A.12 Silicon band-structure as calculated with an extended basis set. . .	120
A.13 Density of states for the silicon diamond phase.	120
B.1 Normal mode vectors for an isosceles triangle.	129
C.1 Fraction of non-annealed defects.	132

List of Tables

4.1	Binding energies and HOMO–LUMO gaps for small silicon clusters.	41
4.2	Zero-point energies as calculated within HF/6-31G* for various isomers of Si ₇ to Si ₁₀ .	42
4.3	Binding energies and HOMO–LUMO gaps for several isomers from Si ₉ to Si ₁₄ .	43
4.4	Vibrational frequencies of lowest-energy silicon clusters.	49
4.5	Dipole moments and polarizabilities.	56
6.1	Cohesive energies and prolateness for the most stable isomers of Si ₂₅ .	67
6.2	Atomic charges and coordination numbers of Si _{25A} and Si _{25B} .	76
7.1	Formation energies of different n -vacancy clusters.	90
7.2	Formation energies obtained with SCC-DFTB for vacancy clusters.	91
7.3	Defect related positron lifetimes for unrelaxed and relaxed structures.	99
A.1	Bulk-modul and second order elastic moduli.	113
A.2	Cohesive energies for isomers of Si ₂ to Si ₈ .	114
A.3	Cohesive energies and net-charges for two isomers of Si ₁₀ .	116
B.1	Schönflies notation for point groups.	122
B.2	Group table for the C_{3v} point group	122
B.3	Character table for the C_{3v} point group.	125
B.4	Contributions of symmetry operations to group characters.	126
B.5	Character table for the C_{2v} point group.	129
C.1	Annealing temperatures for different combinations of ΔE and ν_0/N_j .	132
