CONTENTS

Chapter 1 Historical introduction 3

1.1 General comments 3
1.2 Historical outline 4

Chapter 2 Basis of the $^{40}Ar/^{39}Ar$ dating method 9

2.1 Potassium–argon dating 9
2.2 $^{40}Ar/^{39}Ar$ dating 12
2.3 Potassium and its isotopes 14
2.4 The ^{40}K decay scheme and constants 15
2.5 Derivation of age equations 17
2.6 Atmospheric argon 19
2.7 Materials suitable for dating 21
2.7.1 Introduction 21
2.7.2 Feldspars 22
2.7.2.1 Alkali feldspar 22
2.7.2.2 Plagioclase 23
2.7.3 Feldspathoids 24
2.7.4 Micas 25
2.7.4.1 Biotite and phlogopite 25
2.7.4.2 Muscovite 26
2.7.4.3 Lepidolite 26
2.7.4.4 Glauconite 26
2.7.5 Amphiboles 27
2.7.6 Pyroxenes 28
2.7.7 Whole rocks 28
2.7.7.1 Volcanic rocks 29
2.7.7.2 Metamorphic rocks 32
2.7.8 Glass 33
2.7.9 Clay minerals 34
2.7.10 Evaporites 35
2.8 Range of applicability 35

Chapter 3 Technical aspects 40

3.1 Introduction 40
3.2 Sample preparation 40
3.3 Monitor minerals 41
3.4 Nuclear reactions 43
3.5 Nuclear reactors as a neutron source 44
3.6 The $^{39}K(n,p)^{39}Ar$ reaction 47
3.7 Interfering nuclear reactions and correction factors 51
3.7.1 General 51
3.7.2 Reactions on calcium 51
3.7.3 Reactions on potassium 55
3.7.4 Reactions on chlorine 57
3.8 Optimization of irradiation parameters 57
3.8.1 Introduction 57
3.8.2 Sample size 58
3.8.3 Production of sufficient ^{39}Ar 59
3.8.4 Minimization of reactor-induced ^{40}Ar interference 60
3.8.5 Minimization of interference from $^{40}Ca(n,n\alpha)^{36}Ar$ reaction 60
3.8.6 Interference from the $^{42}Ca(n,\alpha)^{39}Ar$ reaction 62
3.8.7 Other interferences 62
3.8.8 Conclusions 63
3.9 Neutron flux gradients 63
3.10 Self-shielding 66
3.11 Temperature effects 66
3.12 Lattice damage 66
3.13 Decay factors 67
3.14 Total sample activity 67
3.15 Safety aspects 68
3.16 Argon extraction systems 69
3.16.1 Introduction 69
3.16.2 Pumps and pressure measurement 69
3.16.3 Furnaces 70
3.16.4 Temperature monitoring 72
3.16.5 Gas cleanup 72
3.16.6 Extraction system blanks 73
3.17 Mass spectrometry 73
3.17.1 Introduction 73
3.17.2 Basic concepts 74
3.17.3 Ion sources 78
3.17.4 Ion detection and collection 78
3.17.5 Static mode operation 79
3.17.6 Machine calibration 80
3.17.7 Orifice correction 81
3.17.8 Data acquisition 82
3.17.9 Calculation of $^{40}Ar^*/^{39}Ar_K$ 83
3.17.10 Error estimates 85

Chapter 4 Interpretation of results: age spectrum and isochron approaches 86

4.1 Introduction 86
4.2 Single-site diffusion (Turner model) 86
4.3 Age spectra conforming to a single-site diffusion model 93
4.4 Slow cooling models 96
4.5 Numerical solutions 97
4.6 Mixed phases 99

4.7 Resolution within the age spectrum 106
4.8 Excess argon 106
4.8.1 Introduction 106
4.8.2 Excess ^{40}Ar uptake by a homogeneous phase 107
4.8.3 Excess ^{40}Ar uptake by a mixture 108
4.8.4 Excess ^{40}Ar and flat release patterns 110
4.8.5 Excess ^{40}Ar and variable age spectra 110
4.9 Recoil distribution of ^{39}Ar 110
4.10 Grain size and distribution 112
4.11 Phase changes in vacuum 113
4.12 Behavior of minerals and whole rocks 114
4.12.1 High-temperature alkali feldspar 114
4.12.2 Low-temperature alkali feldspar 115
4.12.3 Plagioclase 116
4.12.4 Feldspathoids 116
4.12.5 Biotite 116
4.12.6 Muscovite and phengite 117
4.12.7 Amphiboles 117
4.12.8 Pyroxene 117
4.12.9 Whole rocks 117
4.12.10 Evolution of illite to muscovite 118
4.13 Isotope correlation diagrams 120

Chapter 5 Diffusion theory, experiments, and thermochronology 127

5.1 Introduction 127
5.2 The process of diffusion 127
5.3 Phenomenological basis of diffusion theory 128
5.4 Methods of solution for constant D (or κ) 130
5.4.1 Plane sheet geometry 130
5.4.2 Semi-infinite medium 131
5.4.3 Spherical and cylindrical geometries 131
5.5 Numerical approaches for variable D 131
5.6 Calculation of episodic $^{40}Ar^*$ loss 132
5.7 Slow cooling 133
5.7.1 Dodson's model 133
5.7.2 The mathematics of slow cooling 134
5.7.3 Closure temperature for first-order loss and volume diffusion 134
5.7.4 Dodson's method of solution of the accumulation–diffusion–cooling equation in terms of heat conduction with variable boundary conditions 136
5.7.5 Closure profiles in minerals 136
5.7.6 Summary of Dodson's closure temperature model 138
5.8 Solutions of the heat flow equation 139
5.8.1 Introduction 139
5.8.2 Simple uplift 139
5.8.3 Finite tabular pluton without uplift 140
5.8.4 Dike with uplift and heat generation 141
5.8.5 Model parameters 142
5.8.5.1 Introduction 142
5.8.5.2 Thermal properties and dimensions 143
5.9 Diffusion studies and results 143
5.9.1 Background 143
5.9.2 Experimental criteria 145
5.9.3 Laboratory studies of argon diffusion in natural silicates 147
5.9.3.1 Introduction 147
5.9.3.2 Biotite-phlogopite 148
5.9.3.3 Hornblende 151
5.9.3.4 Muscovite 153
5.9.3.5 Feldspars 153
5.10 Coupling of argon diffusion and heat flow 154
5.10.1 Introduction 154
5.10.2 $^{40}Ar^*$ loss from microcline at Inyo Domes, California 154
5.10.3 The model 155
Appendix A.5.1 Separation of variables solution for plane sheet 156
Appendix A.5.2 Laplace transform solution for semi-infinite medium 158
Appendix A.5.3 Translation to spherical coordinates 159
Appendix A.5.4 Closure temperature for first-order loss 160
Appendix A.5.5 Sample diffusion calculation 162

Chapter 6 Applications and case histories 163

6.1 Overview 163
6.2 Lunar geochronology 163
6.2.1 General comment 163
6.2.2 Mare Tranquillitatis geochronology 163
6.2.2.1 Introduction 163
6.2.2.2 *Apollo 11* basalts 164
6.2.2.3 Age spectra, low-K basalts 164
6.2.2.4 Age spectra, high-K basalts 169
6.2.2.5 Argon loss models 171
6.2.3 *Apollo 12* basalts 171
6.2.4 Significance of mare basalt dating 173

6.2.5 Geochronology of the lunar highlands 174
6.3 Age spectra reflecting episodic argon loss: examples and applications 178
6.3.1 Introduction 178
6.3.2 Contact aureole studies 178
6.3.3 Sedimentary basin thermal histories 179
6.3.4 Application of isochron analysis to partially outgassed xenoliths 181
6.4 Uplift and cooling studies 182
6.4.1 Introduction 182
6.4.2 Simple cooling of an igneous intrusion 182
6.4.3 Metamorphic cooling histories 184
6.5 Geochronology and paleomagnetism 186
