1. ASSOCIATIVE THEORY AND THE PHENOMENA OF PERCEPTUAL LEARNING	1
1.1 The standard associative model	4
1.1.1 The Rescorla–Wagner model	6
1.1.2 Wagner’s SOP model	8
1.1.3 Application to discrimination learning	13
1.2 Some perceptual learning phenomena	16
1.2.1 Effects of discrimination training	18
1.2.2 Exposure learning	22
1.3 Conclusion	27
2. HABITUATION	29
2.1 An associative theory of habituation	30
2.1.1 Preliminary evaluation	31
2.1.2 The effects of distractors	36
2.1.3 Contextual effects in habituation	39
2.1.4 Conclusions	46
2.2 S–R and comparator theories	46
2.2.1 Dishabituation by stimulus omission	48
2.2.2 Distractor effects reconsidered	50
2.2.3 Generalization after a retention interval	53
2.2.4 Generalization after extended training	58
2.2.5 Conclusions	66
3. LATENT INHIBITION AS REDUCED ASSOCIABILITY	68
3.1 Habituation and latent inhibition	68
3.1.1 The role of the UR	68
3.1.2 Empirical dissociations of habituation and latent inhibition	71
3.2 CS predictability and latent inhibition	81
3.2.1 Wagner’s theory	81
3.2.2 Short-term latent inhibition	82
3.2.3 The context-specificity of latent inhibition	86
3.2.4 An alternative associative account	89
3.3 Stimulus consequences and latent inhibition	90
3.3.1 Conditioned attention theory	90
3.3.2 The Pearce–Hall model	98
3.3.3 The role of contextual factors	104

4. LATENT INHIBITION AS ASSOCIATIVE INTERFERENCE	108
4.1 Interference theories	108
4.1.1 Interference with conditioning	108
4.1.2 Retrieval failure	116
4.2 Contextual factors in retrieval	121
4.2.1 Context-specificity in conditioning	122
4.2.2 Retrieval and context-specificity in latent inhibition	131
4.3 Conclusions	136
5. ACQUIRED DISTINCTIVENESS: MEDIATION AND DIFFERENTIATION	139
5.1 Experimental studies with human subjects	141
5.1.1 Transfer between verbal and motor tasks	141
5.1.2 Transfer to a generalization test	147
5.1.3 Transfer from verbal to perceptual tasks	149
5.2 Studies with non-human subjects	152
5.2.1 Transfer in discrimination learning	152
5.2.2 Other procedures	154
5.2.3 Conclusions	160
5.3 Theoretical interpretations	160
5.3.1 Mediation theory	160
5.3.2 Differentiation theory	168
5.3.3 Evaluation of the theories	171
6. ACQUIRED DISTINCTIVENESS: ATTENTIONAL FACTORS	180
6.1 Theories of attention in discrimination learning	181
6.1.1 Analyser theory	181
6.1.2 The Pearce–Hall model	184
6.2 Evidence from studies of transfer	185
6.2.1 Negative transfer after conditioning	185
6.2.2 Transfer after discrimination training	190
6.2.3 Effects of irrelevance training	200
6.2.4 Conclusions	205
7. DISCRIMINATION AFTER STIMULUS EXPOSURE	207
7.1 A survey of the experiments	207
7.1.1 Analysis of the Gibson–Walk procedure	208
7.1.2 Studies of avian imprinting	212
7.1.3 Latent learning	213
7.1.4 Discrimination learning in human subjects	216
7.1.5 Experiments using conditioning procedures	219
7.1.6 Summary	222

7.2 Theoretical interpretation	223
7.2.1 The role of novelty and familiarity	223
7.2.2 Latent inhibition	230
7.2.3 Acquired equivalence and the role of context	231
7.2.4 Sensory preconditioning	233
7.2.5 Conclusions	242
8. LEARNING AND THE MODIFICATION OF STIMULUS REPRESENTATIONS	244
8.1 Revisions to the standard model	245
8.1.1 Additions	245
8.1.2 Elaborations	247
8.2 Applying the revised model	250
8.2.1 Post-trial distractor effects	251
8.2.2 Generalization after a retention interval	253
8.2.3 Generalization after extended training	254
8.2.4 Conclusions	258
