

Contents

Preface	vii
1. Estes' Statistical Learning Theory: Past, Present, and Future <i>Patrick Suppes</i>	1
2. Choosing Between Uncertain Options: A Reprise to the Estes Scanning Model <i>Gordon Bower and Evan Heit</i>	21
3. A Path Taken: Aspects of Modern Measurement Theory <i>R. Duncan Luce</i>	45
4. Chaos Theory: A Brief Tutorial and Discussion <i>James T. Townsend</i>	65
5. Imitatio Estes: Stimulus Sampling Origins of Weber's Law <i>Stephen Link</i>	97
6. A Mathematical Theory of Attention in a Distractor Task <i>David LaBerge</i>	115
7. Triple Correlation and Texture Discrimination <i>John I. Yellott, Jr.</i>	133
8. Exemplars, Prototypes, and Similarity Rules <i>Robert M. Nosofsky</i>	149

9. Stimulus Sampling and Distributed Representations in Adaptive Network Theories of Learning <i>Mark A. Gluck</i>	169
10. Serial Organization in a Distributed Memory Model <i>Bennet B. Murdock</i>	201
11. Reducing Interference in Distributed Memories Through Episodic Gating <i>Steven A. Sloman and David E. Rumelhart</i>	227
12. What Good is Connectionist Modeling? A Dialogue <i>Jay G. Rueckl and Stephen M. Kosslyn</i>	249
