Preface ix

1. Toward an Information-Processing Solution to Some Problems in the Study of Cognitive Development	1
Problems in Research on Cognitive Development	1
The Problem of Stage	1
The Problem of Transition	4
The Information-Processing Paradigm	5
Production Systems: A Language for Process Models	6
Example 1	8
Example 2	11
Production Systems in Cognitive Psychology	13
Summary and Overview	13
2. Quantitative Comparison: A Production System Model	16
Quantitative Comparison	16
PS.QC1	18
Goal Manipulation	20
Main Productions	21
A Trace	23
Some Comments on the Model	26
3. Processes for Quantification	29
Introduction	29
Quantification Operators: Overview	30

Subitizing: Theoretical and Empirical Background	31
Experiment 1	34
Experiment 2	35
Experiment 3	38
Experiment 4	39
Summary of the Four Experiments	40
A Model for Subitizing	41
An Extended Model of System Architecture	43
PS.SUB2	44
Counting: Theoretical and Empirical Background	48
Subitizing and Adding	49
PS.SUBADD	50
PS.COUNT	62
Estimation	64
Development of the Quantification Operators	67
Relative Magnitude Determination	71
The Development of Relative Magnitude Determination Processes	74
One–One Correspondence	76
Quantification Processes and the Structure and Organization of the IPS	80
4. Class Inclusion	81
Causes of Failure	82
Process Models for Class-Inclusion Success and Failure	86
Empirical Tests of the Four State Theories	88
Experiment I. Subjects and Procedure	88
Experiment II. Subjects and Procedure	89
Revised State Theories	92
A Program for PS.QC2	98
A Program for PS.QC3	102
Developmental Transition from PS.QC2 to PS.QC3	102
Class-Inclusion Performance the Structure and Organization of the IPS	103
5. Conservation of Quantity	106
Conservation of Discontinuous Quantity	107
Equivalence Conservation	108
Identity Conservation	109
Development of Conservation of Quantity	110
Identity Conservation and Q_s	111
Equivalence Conservation and Q_s	115
Generalization of Conservation Rules to Q_c	118
Generalization of Conservation Rules to Q_e	121

Operational Conservation of Quantity	128
PS.QC5: A Model for Quantitative Comparison and Conservation	130
LTM Structure	130
Variables	132
Production Sequence and Conventions	132
Goal Manipulation	132
The Visual Encoding System	132
Verbal Encoding	132
Conservation	134
Quantitative Comparison	135
A Trace of PS.QC5 on a Conservation Task	136
Conservation of Quantity and the Structure and Organization of the IPS	138
6. Transitivity of Quantity	140
Introduction	140
Transitive Processing in Adults	141
Linguistic Encoding	141
Operations	146
Spatial Representation	147
A Possible Reconciliation	152
Productions for Naive Transitive Processing	153
PS.QC6: A Model for Quantitative Comparison, Including Conservation and Transitivity Rules	155
The Development of Transitive Processing	158
Detection of Environmental Regularities	160
Linguistic Correlates	161
Coordination of Quantitative Relations	162
When Does Transitive Processing Appear?	166
Task-Specific Shortcuts	168
Generalization from Q_s to Q_c and Q_e	168
Transitivity of Quantity and the Structure and Organization of the IPS	171
7. The Organization of the Information-Processing System	172
Introduction	172
Memory Structure	173
Short-Term Memory Buffers	173
Memory Dynamics	182
The Time Line	182
Hierarchy of Productions	184

8. The Development of the Information-Processing System	188
Introduction	188
Innate Systemic Productions (Tier 3)	189
Efficient Processing through Consistency Detection	190
Efficient Processing through Redundancy Elimination	191
Local Organization of Subsystems	195
Efficient Processing through Global Orientation	197
Innate Specific Productions (Tier 1)	198
Consistency Detection Procedures	200
Development of Object Constancy	209
Development of Q_s	211
Innate Strategic Productions (Tier 2)	217
Conclusion	222
 References	 225
 Author Index	 235
Subject Index	239
