Preface	xi
<i>What Is Cognitive Science?</i>	xi
<i>Why Bother with Foundations?</i>	xviii
<i>Some Personal Background and Intellectual Debts</i>	xxi
Chapter 1	
The Explanatory Vocabulary of Cognition	1
<i>Cognitive Phenomena and Folk Psychology</i>	1
<i>Capturing Generalizations</i>	6
<i>The Stimulus-Independence of Cognitive Behavior</i>	12
<i>Phenomena as "Events under Descriptions"</i>	16
Chapter 2	
The Explanatory Role of Representations	23
<i>Introduction</i>	23
<i>The Appeal to Representations</i>	24
<i>Representational and Functional Levels</i>	28
<i>Representational Content as Defining a Level of Description</i>	32
• <i>Levels and Constraints on Realizability</i>	35
<i>Where Does the Semantic Interpretation Come From?</i>	38
<i>End Note 1: When Are Functional States Representations?</i>	45
<i>End Note 2: On the Notion of Representational Content</i>	48
Chapter 3	
The Relevance of Computation	49
<i>Some Background: Formalism, Symbols, and Mechanisms</i>	49
<i>Computation as a Symbolic Process</i>	54
<i>Syntax and Semantics in Computation</i>	59
• <i>A Numerical Example</i>	59
• <i>Cognitive Rules and Syntax</i>	62
• <i>A Note on the Notion of "Computing"</i>	69
<i>The Role of Computer Implementation</i>	74
• <i>The Control Issue</i>	78

## Chapter 4

- The Psychological Reality of Programs: Strong Equivalence 87  
*The Role of Functional Architecture* 87  
*Functional Architecture and Computer Programs* 93  
 • *Algorithms' Dependence on Functional Architecture* 95  
*Functional Architecture and Mental Processes* 101

## Chapter 5

- Constraining Functional Architecture 107  
*The Level-of-Aggregation Problem* 107  
*Some Methodological Proposals* 111  
*Complexity Equivalence* 114  
 • *Strong-Equivalence and Reaction-Time Measures* 120  
*Cognitive Penetrability* 130  
 • *Is Everything Cognitively Penetrable?* 140

## Chapter 6

- The Bridge from Physical to Symbolic: *Transduction* 147  
*Introduction* 147  
 • *Contact between Mechanism and Environment* 149  
 • *The Transducer Function* 151  
*Criteria for a Psychological Transducer* 153  
 • *The Function of a Transducer Is Nonsymbolic* 154  
 • *A Transducer Is Primarily Stimulus-Bound* 155  
 • *A Transducer Output Is an Atomic Symbol (or n-tuple)* 158  
 • *Transducer Inputs Must Be Stated in the Language of Physics* 165  
*Additional Constraints on Transducers* 171  
 • *Can Transducers Be Identified by Neurophysiological Methods?* 171  
 • *Can Transducers Be Identified by Psychophysical Methods?* 173  
 • *Can Transducers Be Identified by Functional Analysis?* 176  
 • *Summary* 178  
*Some Consequences of this Approach: Is Perception "Direct"?* 179  
 • *"Ecological Optics" and the Perception of Spatial Layout* 180  
 • *Detecting Invariance* 187  
 • *Temporal Order and Memory* 188

## Chapter 7

- Functional Architecture and Analogue Processes 193  
*Reasoning and the Language of Thought* 193  
*The Concept of an Analogue Process* 197  
 • *The Attraction of Analogues* 197  
 • *What Makes Something an Analogue Process?* 199

<i>Forms of Constraint on Processes: The Notion of Capacity</i>	203
• <i>Intrinsic versus Semantic Constraints</i>	205
• <i>Explanation and Functional Architecture</i>	210
<i>The Search for Fixed Architectural Functions</i>	216
<b>Chapter 8</b>	
<i>Mental Imagery and Functional Architecture</i>	225
<i>Introduction: The Autonomy of the Imagery Process</i>	225
<i>Tacit Knowledge and "Mental Scanning"</i>	231
• <i>The Empirical Phenomena: Mental Scanning</i>	231
• <i>Some Preliminary Considerations</i>	233
• <i>Task Demands of Imagery Experiments</i>	236
• <i>The Generality of the "Tacit Knowledge" View</i>	238
• <i>Some Empirical Evidence</i>	242
<i>Other Arguments against the Tacit-Knowledge View</i>	245
• <i>Access to Tacit Knowledge</i>	245
• <i>Combining Imagery and Vision</i>	247
<i>What Theoretical Claim About Imagery Is Being Made?</i>	251
<b>Chapter 9</b>	
<i>Epilogue: What Is Cognitive Science the Science of?</i>	257
<i>Summary of Assumptions</i>	257
<i>Carving Nature at the Joints</i>	263
<i>Some Possible Noncognitive Effects: Learning, Development, and Moods</i>	266
<b>References</b>	273
<b>Index</b>	285
