

C O N T E N T S

SECTION I. Basic and clinical findings.

Behaviorally dependent neuronal gating in the hippocampus. J. Winson.	3
Temporally constant and temporally changing spatial memory : single unit correlates in the hippocampus. D.S. Olton.	16
The vestibular navigation hypothesis : a progress report. M. Potegal.	28
Coordinate representations underlying arm movements in three-dimensional space. J.F. Soechting.	35
Cognitive versus sensorimotor encoding of spatial information. J. Paillard.	43
Spatial cognition in man: The evidence from cerebral lesions. G. Ratcliff.	78
Mapping operations, spatial memory and cholinergic mechanisms. M. Ammassari-Teule.	91
Effects of dentate granule cell depletion in rats : failure to recall more than one event at the same place. L.K. Gerbrandt, and G.O. Ivy.	106
The septal lesioned rat forever here. T. Herrmann.	116
Basal ganglia, instrumental and spatial learning. J.A. Mitchell and G. Hall	124
Reaching in the extrapersonal space or how to catch a moving object. M. Fabre-Thorpe, and F. Levesque.	131
Superior colliculus, hippocampus and spatial behaviour. N. Foreman.	
Changes in neuronal activity of motor cortical areas associated with the coding of spatial parameters of the movement : preliminary results. A. Riehle.	146
Cerebral lesions and internal spatial representations. L.A. Morrow.	156

The encoding and recall of spatial location after right hippocampal lesions in man.	165
M.L. Smith.	
A case of dissociation in topographical disorders : the selective breakdown of vector-map representation.	173
M. van der Linden, and X. Seron.	

SECTION II. Development of spatial knowledge.

Early development of spatial orientation in humans.	185
L.P. Acredolo.	
Children's understanding of maps.	202
R.M. Downs, and L.S. Liben.	
Space, organism and objects, a Piagetian approach.	220
A. Bullinger.	
Human spatial reference systems.	233
J. Pailhous, J.-C. Lepecq, and P. Péruch.	
Detour ability in infants and toddlers.	250
J.J. Lockman.	
Developmental and experiential aspects of children's spatial problem solving.	257
E.M. Parko.	
The relation between locomotor experience and spatial knowledge in infancy.	264
M.L. Glicksman.	
Cognitive influences on the acquisition of route knowledge in children and adults.	271
G.L. Allen.	
Cognitive and motor representations of space and their use in human visually-guided locomotion.	284
J.A. Thomson.	

CONCLUSION

A sense of where you are : functions of the spatial module.	293
U. Neisser.
