List of Contributors ix

Preface xi

Part I: Basic Issues

- 1. A Function for Cognitive Neuropsychology** 3
C. Semenza, P. Bisiacchi, and V. Rosenthal
- Introduction 3
The target: Intellectual skills 4
A function for cognitive neuropsychology 10
Alternative views 16
Function reorganisation due to brain damage 21
Methodological revision 23
- 2. Does It Rattle When You Shake It? Modularity of Mind and the Epistemology of Cognitive Research** 31
V. Rosenthal
- Introduction 31
Part 1 35
Part 2 40

3. From Models to Neuropsychological Data and Vice Versa	59
<i>G. Sartori</i>	
Introduction	59
<i>Thesis defendae</i>	61
Dissociations	62
Error classification	69
Conclusions	71

4. Observations on Theoretical Models in Neuropsychology of Language	75
<i>C. Burani and D. Parisi</i>	
Introduction	75
Shortcomings of information-processing models	77
How to overcome the shortcomings of information-processing models by using computational models	82
Conclusions	85

Part II: Language Comprehension

5. Automatic Processes in Language Comprehension	91
<i>G. B. Flores d'Arcais</i>	
Introduction	91
Automatic and controlled processes	92
Early and recent models in cognitive psychology	93
Evidence for automatic processing	96
Lexical access	97
Lexical access as an automatic process	100
An exploratory study on words and picture naming	103
Automatic syntactic computation during language comprehension	104
Selection of a response for output	108
Conclusions	110

6. Autonomy and Automaticity: Accessing Function Words during Sentence Comprehension	115
<i>A. D. Friederici</i>	
Introduction	115
Recognition of open class words and closed class words	117
The experiments	118
Processing open and closed class items during sentence comprehension: Evidence from normal adults	120
Children's sensitivity to closed class words: The development of automatic processes	123
Broca's aphasia: Loss of autonomy or loss of automaticity?	128
Conclusion	130

7. Sentence-processing Strategies for Broca's Aphasics and Normal Speakers as Reflected by Gaze Movements	135
<i>W. Huber, G. Lüer, and U. Lass</i>	
Introduction	135
Methods	138
Results	138
Discussion	144
8. Localisation of Aphasia: Science or Fiction	161
<i>R. De Bleser</i>	
Problems with the deficit memory of language localisation	161
Deficit-lesion correlation	165
Discussion	182
Part III: Reading and Writing	
9. Modelling the Writing Process	189
<i>A. W. Ellis</i>	
Introduction	189
Writing systems and writing processes	190
High-level planning of speech and writing	191
Three theories of spelling	192
A compromise model	196
Spelling errors	200
What is a letter?	202
Letter-level slips of the pen	203
Pure dysgraphias	205
10. Acquired Disorders of Spelling	213
<i>K. Patterson</i>	
Spelling and phonology	213
Spelling without phonology	218
The nature of the subcomponents of spelling: What can we learn from patients?	222
Appendix: Case report	228
11. Independence of Access to Meaning and Phonology: Arguments for Direct Non-semantic Pathways for the Naming of Written Words and Pictures	231
<i>H. Kremin</i>	
Introduction to frame of reference	231
Reading through semantics	232
The peripheral reading strategy	237
Direct print-to-sound associations	240
Independence of access to meaning and phonology for written words and pictures: An experimental study	242
Experiment	243
Concluding remarks	247

12. Mechanisms for Reading Non-words: Evidence from a Case of Phonological Dyslexia in an Italian Reader	253
<i>P. De Bastani, C. Barry, and M. Carreras</i>	
Introduction	253
Theoretical impairments of non-word reading	258
A case of phonological dyslexia in an Italian reader	260
Discussion	262
Conclusions	266

Part IV: Face Recognition

13. Face Perception: Underlying Processes and Hemispheric Contribution	271
<i>J. Sergent</i>	
Introduction	271
Efficiency and limitation of face-recognition processes	272
Processes underlying face perception	274
Contribution of the cerebral hemispheres to face perception	283
Concluding remarks	291
14. Prosopagnosia: A Disorder of Rapid Spatial Integration	297
<i>J. Davidoff</i>	

Part V: Memory

15. Mnemonic Retraining of Organic Memory Disorders	313
<i>L. S. Cermack and M. O'Connor</i>	
Mnemonics used to facilitate retrieval	314
Individual therapeutic attempts	321
Conclusions	323
16. The Role of Articulation in Verbal Short-term Memory	325
<i>S. F. Cappa and G. Vallar</i>	
Introduction	325
The patient	327
The experiments	329
Discussion	332

Indices	335
