Acknowledgements	vii
Introduction	ix
PART ONE	
Mapping the Study of Scientific Cognition	
RONALD N. GIERE – The Units of Analysis in Science Studies	3
WILLIAM R. SHADISH Jr. and ROBERT A. NEIMEYER – Contributions of Psychology to an Integrative Science Studies: The Shape of Things to Come	13
PART TWO	
Models for Studying Scientific Cognition	
MICHAEL E. GORMAN – Error and Scientific Reasoning: An Experimental Inquiry	41
PAUL THAGARD – Scientific Cognition: Hot or Cold?	71
STEPHEN TURNER – Tacit Knowledge and the Project of Computer Modelling Cognitive Processes in Science	83
PART THREE	
The Modularity of Scientific Cognition	
BEATRICE DE GELDER – Granny, the Naked Emperor and the Second Cognitive Revolution	97
TERRY SHINN – Cognitive Process and Social Practice: The Case of Experimental Macroscopic Physics	119
PART FOUR	
Language as an Indicator of Scientific Cognition	
DONALD T. CAMPBELL – Models of Language Learning and their Implications for Social Constructionist Analyses of Scientific Belief	153
DAVID BLOOR – Professor Campbell on Models of Language-Learning and the Sociology of Science: A Reply	159
EDWARD MANIER – Reductionist Rhetoric: Expository Strategies and the Development of the Molecular Neurobiology of Behavior	167

PART FIVE
The Prospects for an Integration of Approaches

STEVE WOOLGAR – Representation, Cognition and Self: What Hope for an Integration of Psychology and Sociology?	201
THOMAS NICKLES – Integrating the Science Studies Disciplines	225
Participants at the Yearbook Conference	257
Index	259
