<b>Trademarks</b>	<b>xi</b>
<b>Preface</b>	<b>xiii</b>
<b>1 Introducing human–computer interaction</b>	<b>1</b>
HCI, ergonomics and human factors	2
Psychology and HCI	3
HCI and computer science	3
HCI, users and organizations	4
The user interface	5
A framework for HCI	7
Overview of the book	9
<b>2 An introduction to human memory</b>	<b>11</b>
Fundamental memory structures and processes	13
Short-term memory experiments	16
Chunking	20
Working memory	21
Long-term memory	23
Recall from categories	24
Consistency and coherence	26
<b>3 Memory, organization and structures</b>	<b>28</b>
Recall and recognition	29
Propositional networks	30
Facilitation and priming	32
Coherence	33
Spreading activation	34
Interference effects	35
Elaborated memory structures	37
Inference and memory recall	39
Memory for gist	41
<b>4 Knowledge representation</b>	<b>43</b>
Representations and knowledge	43
Three representational families	44
Conclusion	58

<b>5 Expertise, skill and skill acquisition</b>	<b>60</b>
Stages of skill acquisition	61
An example of skill acquisition	62
Practice effects	64
Positive and negative transfer	65
Programming as a skill	66
Conclusion	67
<b>6 Developing interface designs</b>	<b>69</b>
Perspective on user-interface design	70
Software-engineering methods and HCI design	72
Formal methods	74
Three software-engineering paradigms	75
Prototyping	77
Pressman's model of system development	80
Generic phases in software development	81
Conclusion	82
<b>7 Evaluations of interactive systems</b>	<b>84</b>
Evaluation and design procedures	85
Experimental methods	87
Experimental methodology	88
Experimental design	93
Statistical treatment of the data	97
Conclusion	99
<b>8 User-interface design: environments, managements systems and toolkits</b>	<b>100</b>
User-interface design environments	101
User-interface management systems	104
User-interface toolkits	107
Conclusion	112
<b>9 Early attempts at modelling human-computer interaction</b>	<b>114</b>
A classification of early models in HCI	115
Command language grammar	117
Task action language	125
Goals, operators, methods and selection rules	127
Summary of early models in HCI	133
<b>10 Interaction and user modelling in human-computer interaction</b>	<b>134</b>
Introduction	135
Task action grammar	135
Cognitive complexity theory	139
Interactive cognitive subsystems as a basis for a cognitive task analysis	143
Programmable user models	148
Conclusion	149
<b>11 Task analysis and task modelling</b>	<b>151</b>
Early approaches to task analysis	152
Task analysis and task modelling in HCI	154

Why use task analysis in HCI?	155
A theory of tasks—task and knowledge structures	156
Task knowledge structures and HCI	157
Transfer of knowledge between tasks	158
Tasks, task structure and task knowledge	160
Task knowledge structures	161
A summary of task knowledge structure theory	162
<b>12 Knowledge analysis of tasks</b>	<b>165</b>
A method of task analysis—knowledge analysis of tasks	165
Identifying knowledge	166
Collecting task data: applying knowledge-gathering techniques to task analysis	167
Identifying task knowledge structure components using knowledge analysis of tasks	170
Identifying representative, central and generic properties of tasks	172
Task models	174
<b>13 Task analysis applied to interactive system design</b>	<b>177</b>
Task analysis and system design—a brief review of design practices	177
An application of task analysis to interaction design	183
Summary of case studies	192
<b>14 Informal and formal specification of user-interaction task scenarios</b>	<b>193</b>
Informal specifications of tasks and user interfaces	193
The generalized task model	194
The specific task model	198
The specific interface model	198
A formal specification approach for task-based design	201
Task-object specification and semantics of procedures	204
Conclusion	205
<b>References and Bibliography</b>	<b>207</b>
