Foreword	xii
Introduction	1
Part I General principles of cognitive organization and change and implications for education	
1 Cognitive development in educational contexts: implications of skill theory <i>Thomas R. Bidell and Kurt W. Fischer</i>	11
2 Modes of learning, forms of knowing, and ways of schooling <i>John B. Biggs</i>	31
3 The role of central conceptual structures in the development of children's scientific and mathematical thought <i>Robbie Case</i>	52
4 Social organization of cognitive development: internalization and externalization of constraint systems <i>Jaan Valsiner</i>	65
5 Structural systems in developing cognition, science, and education <i>Andreas Demetriou, Jan-Eric Gustafsson, Anastasia Efklides, and Maria Platsidou</i>	79
Part II Inducing cognitive change	
6 Problems and issues in intervention studies <i>Michael Shayer</i>	107

7	Training, cognitive change, and individual differences <i>Anastasia Efklides, Andreas Demetriou, and Jan-Eric Gustafsson</i>	122
8	Improving operational abilities in children: results of a large-scale experiment <i>Benő Csapó</i>	144
9	Training scientific reasoning in children and adolescents: a critical commentary and quantitative integration <i>Luc Goossens</i>	160

Part III Applications in specific domains

10	Value and limitations of analogues in teaching mathematics <i>Graeme S. Halford and Gillian M. Boulton-Lewis</i>	183
11	Developing thinking abilities in arithmetic class <i>Lauren B. Resnick, Victoria Bill, and Sharon Lesgold</i>	210
12	Causal theories, reasoning strategies, and conflict resolution by experts and novices in Newtonian mechanics <i>J. Ignacio Pozo and Mario Carretero</i>	231
13	Cognitive prerequisites of reading and spelling: a longitudinal approach <i>Wolfgang Schneider and Jan Carol Näslund</i>	256

Concluding chapter

14	Returning to school: review and discussion <i>John B. Biggs</i>	277
	Name index	295
	Subject index	300

Figures and tables

FIGURES

<i>1.1</i>	The developmental ladder (1A) and the developmental web metaphor (1B) for conceptualizing developmental pathways	13
<i>2.1</i>	Modes, learning cycles, and forms of knowledge	39
<i>2.2</i>	An ordered outcome mathematics item	47
<i>3.1</i>	Hypothesized control structures underlying children's balance beam performance at different ages	56
<i>3.2</i>	Conceptual progression across a variety of quantitative tasks	58
<i>5.1</i>	The structure of abilities according to the longitudinal study	88
<i>5.2</i>	The structure of abilities according to the metacognitive study	97
<i>6.1</i>	Growth curves for height	108
<i>6.2</i>	The effects of a medical intervention	109
<i>6.3</i>	Curves of cognitive development for different percentiles of the child population	112
<i>7.1</i>	Mean post-test level scores of the quantitative-relational SSS as a function of the pre-test level score of the respective SSS, treatment group, and age	137
<i>7.2</i>	Mean post-test level scores of the causal-experimental SSS as a function of the pre-test level score of the respective SSS, treatment group, and age	138
<i>8.1</i>	The effect of training on the combinative ability, the logical ability, and the systematizing ability	153
<i>10.1</i>	A structure-mapping analysis of a simple analogy	184
<i>10.2</i>	Four levels of structure mapping	186
<i>10.3</i>	Structure-mapping analysis of some concrete aids	191
<i>10.4</i>	Structure-mapping analysis of a place-value analogue	194
<i>10.5</i>	Structure-mapping analysis of a decomposition analogue	196
<i>10.6</i>	Structure-mapping analysis of a subtraction analogue	197
<i>10.7</i>	Structure-mapping analysis of acquisition of the distributive law	201
<i>10.8</i>	Correspondence between base-10 and base-2	205
<i>11.1</i>	The protoquantitative schemas	215

11.2	Topic coverage planned for a single month in second grade	220
11.3	A second-grade problem and several solutions	222
11.4	Change in achievement test scores for the first grade	223
11.5	Change in achievement test scores for the second grade	224
11.6	Change in achievement test scores for the third grade	225
12.1	Tasks	236
12.2	Correct answers to the problems involved in task II	236
12.3	The arrangements used in tasks II and III	238
12.4	Typical answers at each level of the inertia and the free fall tasks	242
13.1	Relative contributions of the three phonological processing components, verbal intelligence, and early literacy to the prediction of reading comprehension in second grade	267
13.2	Best-fitting structural equation model for the reading comprehension construct	268
13.3	Best-fitting structural equation model for the spelling construct	270

TABLES

1.1	A developmental sequence of skills for arithmetic relations	22
2.1	Modes and levels in the SOLO taxonomy	39
3.1	Cross-task variability in passing rates as a function of task	61
3.2	Pattern of transfer after teaching the dimensional structure	61
4.1	A formalized example of the range of possible internalization consequences, following child's and 'social other's' (caregiver's) actions	69
5.1	Regressions of the school-achievement variables on the cognitive variables	94
6.1	Changes in class means for 12+ boys expressed as percentiles in relation to the CSMS survey data	113
7.1	Loadings of the pre-test variables on the latent variables	130
7.2	Correlations among the latent pre-test factors	131
7.3	Correlations between pre- and post-test factors	132
7.4	Mean pre- and post-test quantitative-relational and causal-experimental SSS level scores of subjects having the same pre-test level scores in the two SSSs as a function of treatment group and age	134
7.5	Frequency of subjects per age and cognitive level who succeeded in the training tasks of the causal-experimental and quantitative-relational SSS	135
8.1	The system of the experimental groups	147
8.2	Results of ability tests at the beginning of the experiment (% of the maximum test score)	151

8.3 The effects of training on the operational abilities: the size and significance of the effects	152
9.1 Number of studies in each of the three categories of three moderator variables for different types of training effectiveness	169
9.2 Summary of effect-size statistics	170
9.3 Mean effect sizes as a function of three moderator variables	171
10.1 Examples of concepts at each level of structure mapping	189
12.1 Frequency of subjects per response category in the case of the five concepts investigated	243
12.2 Cognitive conflict resolution	250
13.1 Means, standard deviations, and range for the predictors and criterion variables included in the analyses	264
13.2 Zero-order and partial correlations of predictor variables with reading and spelling measures	265
13.3 Intercorrelations among latent variables	268
