Contributors	xv
Preface: Why the Fly?	xix

PART I Basic Genetic Methodologies

1. Sources of Information about the Fly: Where to Look It Up

Lawrence S. B. Goldstein

I. Introduction	3
II. Technical References	4
III. Intellectual References	5
IV. Electronic References	7
V. Final Remarks	10
References	11

2. Care and Feeding of *Drosophila melanogaster*

Kathleen A. Matthews

I. Introduction	14
II. Tools of the Trade	14
III. Room and Board	18
IV. Culturing <i>Drosophila</i>	19
V. Reading the Runes—Nomenclature	25
VI. Resources	29
VII. Summary	31
References	31

3. Harnessing the Power of *Drosophila* Genetics

Mariana F. Wolfner and Michael L. Goldberg

I. Introduction	34
II. How Do We Get Mutants from Cloned Genes or Clones from Mutated Genes?	35
III. How Do We Determine Which Stages of the <i>Drosophila</i> Life Cycle Are Affected by a Mutation?	46
IV. How Do We Analyze Mutants?	55
V. Using Mutants to Explore Processes and Pathways	64
VI. Conclusion	71
References	71

4. From Clone to Mutant Gene	
<i>Bruce A. Hamilton and Kai Zinn</i>	
I. Introduction	81
II. Overview	85
III. Protocols	88
IV. Conclusion	92
References	93

PART II Isolation and Culture Methods

5. Raising Large Quantities of <i>Drosophila</i> for Biochemical Experiments	
<i>Christopher D. Shaffer, Joann M. Wuller, and Sarah C. R. Elgin</i>	
I. Introduction	99
II. The <i>Drosophila</i> Colony	100
III. Media Recipes	106
IV. Materials Used	108
References	108
6. Isolation and Organ Culture of Imaginal Tissues	
<i>Jeanette E. Natzle and Gwendolyn D. Vesenka</i>	
I. Perspectives and Applications	110
II. Mass Isolation of Imaginal Discs	111
III. <i>In Vitro</i> Culture of Imaginal Discs	117
IV. Analysis of Biosynthetic Activity	123
V. Isolation of Other Larval Organs	124
VI. Summary and Prospects	125
References	125
7. Mass Isolation of Fly Tissues	
<i>Anthony P. Mahowald</i>	
I. Introduction	129
II. Method for Rearing Flies on Liquid Medium	130
III. Methods for Isolating Specific Cells	131
IV. Isolation of Specific Stages of Oogenesis	137
V. Concluding Observations	140
VI. Solutions	140
References	141
8. Preparation and Analysis of Pure Cell Populations from <i>Drosophila</i>	
<i>Susan Cumberledge and Mark Krasnow</i>	
I. Introduction	143
II. Purifying Embryonic Cells by Fluorescence-Activated Cell Sorting	146

III. Culturing and Analysis of Purified Cells	155
IV. Conclusions	157
References	158
9. Transformation Techniques for <i>Drosophila</i> Cell Lines	
<i>Lucy Cherbas, Robert Moss, and Peter Cherbas</i>	
I. Introduction	161
II. Maintaining and Cloning Cells	163
III. Transforming Cells	166
References	176

PART III Biochemical Preparation Methods

10. Preparation of <i>Drosophila</i> Nuclei	
<i>Christopher D. Shaffer, Joann M. Wuller, and Sarah C. R. Elgin</i>	
I. Introduction	185
II. Dechoriation of Embryos	186
III. Disruption of Embryos	186
IV. Isolation of Nuclei	187
V. Nuclei from Other Developmental Stages	187
References	189
11. Isolation and Characterization of RNA-Binding Proteins from <i>Drosophila melanogaster</i>	
<i>Michael J. Matunis, Erika L. Matunis, and Gideon Dreyfuss</i>	
I. Introduction	192
II. Isolation of RNA-Binding Proteins by Affinity Chromatography	193
III. Characterization of Putative RNA-Binding Proteins	196
IV. Discussion	203
References	204
12. Chromatin Assembly Extracts from <i>Drosophila</i> Embryos	
<i>Peter B. Becker, Toshio Tsukiyama, and Carl Wu</i>	
I. General Introduction	208
II. Extract Preparation	209
III. Chromatin Assembly Reaction	212
IV. Analysis of Reconstituted Chromatin	214
V. Nucleosome Organization at Specific Sites	219
VI. Conclusions and Perspectives	221
References	222

13. The Soluble Nuclear Fraction, a Highly Efficient Transcription Extract from <i>Drosophila</i> Embryos	
<i>Rohinton T. Kamakaka and James T. Kadonaga</i>	
I. Summary	225
II. Introduction	226
III. Preparation of the Soluble Nuclear Fraction	228
IV. <i>In Vitro</i> Transcription/Primer Extension Analysis	231
V. Notes on the Use of the Soluble Nuclear Fraction	233
References	234
14. Basic Methods for <i>Drosophila</i> Muscle Biology	
<i>Eric A. Fyrberg, Sanford I. Bernstein, and K. VijayRaghavan</i>	
I. Introduction	238
II. Specific Methods	240
References	254
15. Isolation of Cytoskeletal Proteins from <i>Drosophila</i>	
<i>Kathryn G. Miller and Douglas R. Kellogg</i>	
I. Introduction	259
II. Affinity Methods for Isolation of Interacting Proteins	261
III. Characterization of Proteins Isolated by Affinity Methods	272
IV. Conclusions and Summary	275
References	276
16. Isolation and Analysis of Microtubule Motor Proteins	
<i>William M. Saxton</i>	
I. Introduction	279
II. Isolation of Motor Proteins	281
III. Characterization of Microtubule Motors	284
IV. Conclusions and Summary	285
References	286
17. Preparation and Analysis of Membranes and Membrane Proteins from <i>Drosophila</i>	
<i>Michael Hortsch</i>	
I. Introduction	289
II. Immunoaffinity Purification of <i>Drosophila</i> Membrane Proteins	290
III. Isolation and Characterization of Cellular Membranes in <i>Drosophila</i> Embryos	294
IV. Conclusion	299
References	300

18. Preparation of Extracellular Matrix*J. H. Fessler, R. E. Nelson, and L. I. Fessler*

I. Introduction	303
II. Isolation of ECM Proteins	305
III. Characterization of ECM Molecules	314
IV. Interactions of ECM Proteins with Cells <i>in Vitro</i>	319
V. Temporal and Spatial Expression of ECM Genes and Localization of ECM Products	320
VI. Miscellaneous Aspects and Conclusions	324
References	325

PART IV Cytological Methods**19. Looking at Polytene Chromosomes***Mary-Lou Pardue*

I. The Beautiful Contig Maps of <i>Drosophila</i>	334
II. Sources of Polytene Chromosomes	335
III. Structure of Polytene Chromosomes	335
IV. Maps of Polytene Chromosomes	340
V. Equipment for Salivary Gland Preparations	341
VI. Protocols for Squash Preparations of Salivary Glands	342
VII. Nucleic Acid Probes for <i>in Situ</i> Hybridization	344
VIII. Protocols for <i>in Situ</i> Hybridization to Polytene Chromosomes	346
References	350

20. Immunological Methods for Mapping Protein Distributions on Polytene Chromosomes*Deborah J. Andrew and Matthew P. Scott*

I. General Introduction	354
II. Mapping Known Chromosomal Components	355
III. Identification and Characterization of Unknown Chromosomal Components	356
IV. Mapping Sites of Accumulation of Regulatory Proteins	356
V. Mapping Protein Domains	358
VI. Tests of Regulatory Interactions among Proteins of Related Function	358
VII. History of Antibody-Staining Methods for Polytene Chromosomes	359
VIII. Procedure for Enzyme-Linked Detection of Proteins on Polytene Chromosomes	360
IX. Procedure for Fluorescent Labeling of Proteins on Polytene Chromosomes	364
X. Double-Labeling of Proteins on Polytene Chromosomes Using Fluorescently Tagged Antibodies	365
XI. Interpretations and Limitations	365
References	367

21. Looking at <i>Drosophila</i> Mitotic Chromosomes	
<i>Maurizio Gatti, Silvia Bonaccorsi, and Sergio Pimpinelli</i>	
I. Introduction	372
II. Preparation of Larval Neuroblast Chromosomes	373
III. Chromosome-Banding Techniques	377
IV. <i>In Situ</i> Hybridization	383
V. Summary and Conclusions	387
References	388
22. Looking at Diploid Interphase Chromosomes	
<i>Shermali Gunawardena and Mary Rykowski</i>	
I. Introduction	393
II. Two-Color Fluorescence <i>in Situ</i> Hybridization to Single-Copy DNA Sequences in Diploid Nuclei	396
III. Summary and Future Directions	408
References	408
23. Electron Microscopy and EM Immunocytochemistry	
<i>Kent L. McDonald</i>	
I. Introduction	412
II. Criteria for Judging Ultrastructure Quality	413
III. Aim and Scope of This Chapter	418
IV. Embryos	418
V. Stages Other Than Embryos	428
VI. Immunolabeling	430
Appendix: Vendor Information	441
References	442
24. Imaging Neuronal Subsets and Other Cell Types in Whole-Mount <i>Drosophila</i> Embryos and Larvae Using Antibody Probes	
<i>Nipam H. Patel</i>	
I. Introduction	446
II. Reagents Used to Visualize Specific Tissues and Subsets of Neurons	447
III. Fixation, Methanol Devitellinization, Storage, and Rehydration Protocols	455
IV. Primary and Secondary Antibody Incubation Procedure	461
V. Histochemical Development Reactions	463
VI. Labeling with Multiple Primary Antibodies	465
VII. Rapid Staining Procedure	470
VIII. Clearing Embryos	471
IX. Dissecting and Mounting Stained Embryos	473
X. Hints for Photographing Histochemically Stained Specimens	475
XI. Hints for Looking at Mutants That Affect Central Nervous System Development	476

XII. Trouble Shooting	478
XIII. Solutions	480
Appendix: Suppliers	484
References	485
25. Immunofluorescence Analysis of the Cytoskeleton during Oogenesis and Early Embryogenesis	
<i>William E. Theurkauf</i>	
I. Introduction	489
II. The Cytoskeleton during Oogenesis	490
III. The Cytoskeleton during Early Embryogenesis	494
IV. Labeling Cytoskeletal Elements in Fixed Oocytes and Embryos	500
References	503
26. High-Resolution Microscopic Methods for the Analysis of Cellular Movements in <i>Drosophila</i> Embryos	
<i>Daniel P. Kiehart, Ruth A. Montague, Wayne L. Rickoll, Graham H. Thomas, and Donald Foard</i>	
I. Introduction	507
II. Optimization of Resolution and Contrast	508
III. Thick, Living Specimens, High NA, and Spherical Aberration	512
IV. Chambers for the Observation of Embryos	516
V. Handling the Embryos	519
VI. High-Fidelity Digital Electronic Imaging and Image Acquisition	520
VII. Dynamics of Image Capture	525
VIII. Digital Image Processing	526
IX. Hard Copy of Electronic Images	526
X. Summary and Prospectus	531
References	532
27. The Use of Photoactivatable Reagents for the Study of Cell Lineage in <i>Drosophila</i> Embryogenesis	
<i>Charles H. Girdham and Patrick H. O'Farrell</i>	
I. Introduction	533
II. Preparation of the Photoactivatable Lineage Tracer	535
III. Injection and Activation of the Photoactivatable Lineage Tracer	536
IV. Fixation of Embryos Carrying Marked Cells	539
V. Analysis of Living Embryos Carrying Marked Cells	541
VI. Summary	541
References	542

28. Looking at Oogenesis	
<i>Esther Verheyen and Lynn Cooley</i>	
I. General Background	545
II. Gross Morphological Analysis	549
III. More Detailed Examination	555
IV. Protocols	557
References	560

PART V Analysis of Gene Expression *in Situ*

29. Methods for Quantitative Analysis of Transcription in Larvae and Prepupae	
<i>Andrew J. Andres and Carl S. Thummel</i>	
I. Introduction	565
II. Staging of Third Instar Larvae and Prepupae	566
III. Organ Culture	569
IV. RNA Isolation	570
References	573
30. <i>In Situ</i> Hybridization to RNA	
<i>Ruth Lehmann and Diethard Tautz</i>	
I. Introduction	576
II. Embryo Collection and Fixation	577
III. Hybridization	581
IV. Detection	583
V. Mounting Techniques	585
VI. Probe Preparation	587
VII. Double Labeling: RNA-Protein	590
VIII. Double Labeling: RNA-RNA	594
IX. Conclusions	597
References	597
31. Looking at mRNA Splicing and Transport <i>in Situ</i>	
<i>Zuzana Zachar, Joseph Kramer, and Paul M. Bingham</i>	
I. Introduction	599
II. Protocols	600
III. Concluding Technical Remarks	609
IV. Concluding General Remarks	610
References	611

32. EM Methods for Visualization of Genetic Activity from Disrupted Nuclei

Ann Beyer, Martha Sikes, and Yvonne Osheim

- | | |
|------------------------------|-----|
| I. Introduction | 613 |
| II. Methods | 615 |
| III. Summary and Conclusions | 628 |
| References | 629 |

PART VI Molecular and Classical Genetic Analysis

33. Ectopic Expression in *Drosophila*

Andrea H. Brand, Armen S. Manoukian, and Norbert Perrimon

- | | |
|---------------------------|-----|
| I. Introduction | 635 |
| II. The Heat-Shock Method | 639 |
| III. The GAL4 System | 643 |
| References | 652 |

34. Mosaic Analysis Using FLP Recombinase

Tian Xu and Stephen D. Harrison

- | | |
|------------------------|-----|
| I. Introduction | 655 |
| II. Mosaic Analysis | 656 |
| III. Genetic Screens | 674 |
| IV. Concluding Remarks | 678 |
| References | 679 |

35. Analysis of Cellular Adhesion in Cultured Cells

Allan J. Bieber

- | | |
|---|-----|
| I. Introduction | 683 |
| II. Cell Transformation and Expression of Cell Adhesion Molecules | 684 |
| III. Analysis of Cellular Adhesion | 690 |
| IV. Concluding Remarks | 694 |
| References | 695 |

36. Using Inhibitors to Study Embryogenesis

Gerold Schubiger and Bruce Edgar

- | | |
|---|-----|
| I. Introduction: Using Chemical Inhibitors to Study Development | 698 |
| II. Introduction of Substances into the Embryo | 698 |
| III. Summary of Drug Uses and Effects | 707 |
| IV. Concluding Remarks | 710 |
| References | 711 |

37. Chromophore-Assisted Laser Inactivation of Cellular Proteins*Anke E. L. Beermann and Daniel G. Jay*

I. Introduction	716
II. Malachite Green Labeling of Antibodies	717
III. Laser Instrumentation and Setup	718
IV. CALI of <i>Drosophila</i> Embryos	720
V. Preparation for Phenotype Analysis	725
VI. Materials	726
VII. Micro-CALI Setup and Application	727
VIII. Limitations	730
IX. Concluding Remarks	731
References	731
Index	733
Volumes in Series	751
