

Summary of contents

Preface	xxxvi
Acknowledgements	xxxviii
1 Basic concepts: atoms	1
2 Basic concepts: molecules	30
3 Nuclear properties	58
4 An introduction to molecular symmetry	88
5 Bonding in polyatomic molecules	115
6 Structures and energetics of metallic and ionic solids	148
7 Acids, bases and ions in aqueous solution	181
8 Reduction and oxidation	212
9 Non-aqueous media	236
10 Hydrogen	261
11 Group 1: the alkali metals	284
12 The group 2 metals	305
13 The group 13 elements	325
14 The group 14 elements	376
15 The group 15 elements	433
16 The group 16 elements	490
17 The group 17 elements	532
18 The group 18 elements	561
19 Organometallic compounds of s- and p-block elements	574

20	<i>d</i> -Block metal chemistry: general considerations	611
21	<i>d</i> -Block metal chemistry: coordination complexes	637
22	<i>d</i> -Block metal chemistry: the first row metals	686
23	<i>d</i> -Block metal chemistry: the second and third row metals	744
24	Organometallic compounds of <i>d</i> -block elements	806
25	The <i>f</i> -block metals: lanthanoids and actinoids	854
26	<i>d</i> -Block metal complexes: reaction mechanisms	880
27	Catalysis and some industrial processes	905
28	Some aspects of solid state chemistry	938
29	The trace metals of life	962
	Appendices	999
	Answers to non-descriptive problems	1024
	Index	1042

1 Basic concepts: atoms 1

1.1	Introduction	1
	Inorganic chemistry: it is not an isolated branch of chemistry	1
	The aims of Chapters 1 and 2	1
1.2	Fundamental particles of an atom	1
1.3	Atomic number, mass number and isotopes	2
	Nuclides, atomic number and mass number	2
	Relative atomic mass	2
	Isotopes	2
1.4	Successes in early quantum theory	3
	Some important successes of classical quantum theory	4
	Bohr's theory of the atomic spectrum of hydrogen	5
1.5	An introduction to wave mechanics	6
	The wave-nature of electrons	6
	The uncertainty principle	6
	The Schrödinger wave equation	6
1.6	Atomic orbitals	9
	The quantum numbers n , l and m_l	9
	The radial part of the wavefunction, $R(r)$	11
	The radial distribution function, $4\pi r^2 R(r)^2$	12
	The angular part of the wavefunction, $A(\theta, \phi)$	13
	Orbital energies in a hydrogen-like species	15
	Size of orbitals	15
	The spin quantum number and the magnetic spin quantum number	15
	The ground state of the hydrogen atom	17
1.7	Many-electron atoms	17
	The helium atom: two electrons	17
	Ground state electronic configurations: experimental data	18
	Penetration and shielding	18
1.8	The periodic table	20

1.9	The aufbau principle	22
	Ground state electronic configurations	22
	Valence and core electrons	23
	Diagrammatic representations of electronic configurations	23
1.10	Ionization energies and electron affinities	24
	Ionization energies	24
	Electron affinities	26
2	Basic concepts: molecules	30
2.1	Bonding models: an introduction	30
	A historical overview	30
	Lewis structures	30
2.2	Homonuclear diatomic molecules: valence bond (VB) theory	31
	Uses of the term <i>homonuclear</i>	31
	Covalent bond distance, covalent radius and van der Waals radius	31
	The valence bond (VB) model of bonding in H ₂	32
	The valence bond (VB) model applied to F ₂ , O ₂ and N ₂	33
2.3	Homonuclear diatomic molecules: molecular orbital (MO) theory	33
	An overview of the MO model	33
	Molecular orbital theory applied to the bonding in H ₂	33
	The bonding in He ₂ , Li ₂ and Be ₂	36
	The bonding in F ₂ and O ₂	36
	What happens if the <i>s–p</i> separation is small?	38
2.4	The octet rule and isoelectronic species	40
	The octet rule: first row <i>p</i> -block elements	40
	Isoelectronic species	41
	The octet rule: heavier <i>p</i> -block elements	41
2.5	Electronegativity values	42
	Pauling electronegativity values, χ^P	42
	Mulliken electronegativity values, χ^M	44
	Allred–Rochow electronegativity values, χ^{AR}	44
	Electronegativity: final remarks	44
2.6	Dipole moments	44
	Polar diatomic molecules	44
	Molecular dipole moments	45
2.7	MO theory: heteronuclear diatomic molecules	46
	Which orbital interactions should be considered?	46
	Hydrogen fluoride	47
	Carbon monoxide	48
2.8	Molecular shape and the VSEPR model	48
	Valence-shell electron-pair repulsion model	48
	Structures derived from a trigonal bipyramidal	53
	Limitations of the VSEPR model	53
2.9	Molecular shape: stereoisomerism	54
	Square planar species	54
	Octahedral species	54

Trigonal bipyramidal species	55
High coordination numbers	55
Double bonds	55

3 Nuclear properties

58

3.1 Introduction	58
3.2 Nuclear binding energy	58
Mass defect and binding energy	58
The average binding energy per nucleon	59
3.3 Radioactivity	60
Nuclear emissions	60
Nuclear transformations	60
The kinetics of radioactive decay	61
Units of radioactivity	62
3.4 Artificial isotopes	62
Bombardment of nuclei by high-energy α -particles and neutrons	62
Bombardment of nuclei by 'slow' neutrons	63
3.5 Nuclear fission	63
The fission of uranium-235	63
The production of energy by nuclear fission	64
Nuclear reprocessing	64
3.6 Syntheses of transuranium elements	64
3.7 The separation of radioactive isotopes	67
Chemical separation	67
The Szilard-Chalmers effect	67
3.8 Nuclear fusion	67
3.9 Applications of isotopes	69
Infrared (IR) spectroscopy	69
Kinetic isotope effects	70
Radiocarbon dating	70
Analytical applications	71
3.10 Sources of ^2H and ^{13}C	72
Deuterium: electrolytic separation of isotopes	72
Carbon-13: chemical enrichment	72
3.11 Multinuclear NMR spectroscopy in inorganic chemistry	72
Which nuclei are suitable for NMR spectroscopic studies?	72
Chemical shift ranges	73
Spin-spin coupling	73
Stereocchemically non-rigid species	78
Exchange processes in solution	79
3.12 Mössbauer spectroscopy in inorganic chemistry	82
The technique of Mössbauer spectroscopy	82
What can isomer shift data tell us?	82

4.1	Introduction	88
4.2	Symmetry operations and symmetry elements	88
	Rotation about an n -fold axis of symmetry	89
	Reflection through a plane of symmetry (mirror plane)	89
	Reflection through a centre of symmetry (inversion centre)	91
	Rotation about an axis, followed by reflection through a plane perpendicular to this axis	91
	Identity operator	91
4.3	Successive operations	93
4.4	Point groups	94
	C_1 point group	94
	$C_{\infty v}$ point group	94
	$D_{\infty h}$ point group	95
	T_d , O_h or I_h point groups	95
	Determining the point group of a molecule or molecular ion	95
4.5	Character tables: an introduction	98
4.6	Why do we need to recognize symmetry elements?	99
4.7	Vibrational spectroscopy	100
	How many vibrational modes are there for a given molecular species?	100
	Selection rules for an infrared or Raman active mode of vibration	101
	Linear ($D_{\infty h}$ or $C_{\infty v}$) and bent (C_{2v}) triatomic molecules	101
	Bent molecules XY_2 : using the C_{2v} character table	103
	XY_3 molecules with D_{3h} symmetry	104
	XY_3 molecules with C_{3v} symmetry	106
	XY_4 molecules with T_d or D_{4h} symmetry	107
	XY_6 molecules with O_h symmetry	108
	Metal carbonyl complexes, $M(CO)_n$	108
	Metal carbonyl complexes $M(CO)_{6-n}X_n$	109
	Observing IR spectroscopic absorptions: practical problems	110
4.8	Chiral molecules	110

5.1	Introduction	115
5.2	Valence bond theory: hybridization of atomic orbitals	115
	What is orbital hybridization?	115
	sp Hybridization: a scheme for linear species	116
	sp^2 Hybridization: a scheme for trigonal planar species	117
	sp^3 Hybridization: a scheme for tetrahedral and related species	118
	Other hybridization schemes	119
5.3	Valence bond theory: multiple bonding in polyatomic molecules	120
	C_2H_4	120
	HCN	120
	BF_3	121

5.4	Molecular orbital theory: the ligand group orbital approach and application to triatomic molecules	122
	Molecular orbital diagrams: moving from a diatomic to polyatomic species	122
	MO approach to bonding in linear XH_2 : symmetry matching by inspection	122
	MO approach to bonding in linear XH_2 : working from molecular symmetry	124
	A bent triatomic: H_2O	124
5.5	Molecular orbital theory applied to the polyatomic molecules BH_3, NH_3 and CH_4	127
	BH_3	127
	NH_3	128
	CH_4	130
	A comparison of the MO and VB bonding models	131
5.6	Molecular orbital theory: bonding analyses soon become complicated	133
5.7	Molecular orbital theory: learning to use the theory objectively	135
	π -Bonding in CO_2	135
	$[NO_3]^-$	137
	SF_6	138
	Three-centre two-electron interactions	141
	A more advanced problem: B_2H_6	141

6 Structures and energetics of metallic and ionic solids 148

6.1	Introduction	148
6.2	Packing of spheres	148
	Cubic and hexagonal close-packing	148
	The unit cell: hexagonal and cubic close-packing	149
	Interstitial holes: hexagonal and cubic close-packing	150
	Non-close-packing: simple cubic and body-centred cubic arrays	151
6.3	The packing-of-spheres model applied to the structures of elements	151
	Group 18 elements in the solid state	152
	H_2 and F_2 in the solid state	152
	Metallic elements in the solid state	152
6.4	Polymorphism in metals	153
	Polymorphism: phase changes in the solid state	153
	Phase diagrams	154
6.5	Metallic radii	154
6.6	Melting points and standard enthalpies of atomization of metals	155
6.7	Alloys and intermetallic compounds	155
	Substitutional alloys	155
	Interstitial alloys	155
	Intermetallic compounds	158
6.8	Bonding in metals and semiconductors	158
	Electrical conductivity and resistivity	158
	Band theory of metals and insulators	158

The Fermi level	160
Band theory of semiconductors	161
6.9 Semiconductors	161
Intrinsic semiconductors	161
Extrinsic (n- and p-type) semiconductors	161
6.10 Sizes of ions	162
Ionic radii	163
Periodic trends in ionic radii	163
6.11 Ionic lattices	164
The rock salt (NaCl) structure type	165
The caesium chloride (CsCl) structure type	167
The fluorite (CaF_2) structure type	168
The antifluorite structure type	168
The zinc blende (ZnS) structure type: a diamond-type network	169
The β -cristobalite (SiO_2) structure type	169
The wurtzite (ZnS) structure type	169
The rutile (TiO_2) structure type	169
CdI_2 and CdCl_2 : layer structures	170
The perovskite (CaTiO_3) structure type: a double oxide	170
6.12 Crystal structures of semiconductors	171
6.13 Lattice energy: estimates from an electrostatic model	171
Coulombic attraction within an isolated ion-pair	171
Coulombic interactions in an ionic lattice	172
Born forces	172
The Born–Landé equation	173
Madelung constants	173
Refinements to the Born–Landé equation	173
Overview	174
6.14 Lattice energy: the Born–Haber cycle	174
6.15 Lattice energy: ‘calculated’ versus ‘experimental’ values	175
6.16 Applications of lattice energies	175
Estimation of electron affinities	176
Fluoride affinities	176
Estimation of standard enthalpies of formation and disproportionation	176
The Kapustinskii equation	177
6.17 Defects in solid state lattices: an introduction	177
Schottky defect	177
Frenkel defect	177
Experimental observation of Schottky and Frenkel defects	178
7 Acids, bases and ions in aqueous solution	181

7.1 Introduction	181
7.2 Properties of water	181
Structure and hydrogen bonding	181
The self-ionization of water	183
Water as a Brønsted acid or base	183

7.3	Definitions and units in aqueous solution	184
	Molarity and molality	184
	Standard state	184
	Activity	184
7.4	Some Brønsted acids and bases	185
	Carboxylic acids: examples of mono-, di- and polybasic acids	185
	Inorganic acids	186
	Inorganic bases: hydroxides	186
	Inorganic bases: nitrogen bases	187
7.5	The energetics of acid dissociation in aqueous solution	187
	Hydrogen halides	187
	H_2S , H_2Se and H_2Te	190
7.6	Trends within a series of oxoacids $\text{EO}_n(\text{OH})_m$	190
7.7	Aquated cations: formation and acidic properties	191
	Water as a Lewis base	191
	Aquated cations as Brønsted acids	191
7.8	Amphoteric oxides and hydroxides	193
	Amphoteric behaviour	193
	Periodic trends in amphoteric properties	193
7.9	Solubilities of ionic salts	193
	Solubility and saturated solutions	193
	Sparingly soluble salts and solubility products	194
	The energetics of the dissolution of an ionic salt: $\Delta_{\text{sol}}G^\circ$	195
	The energetics of the dissolution of an ionic salt: hydration of ions	196
	Solubilities: some concluding remarks	197
7.10	Common-ion effect	197
7.11	Coordination complexes: an introduction	198
	Definitions and terminology	198
	Investigating coordination complex formation	199
7.12	Stability constants of coordination complexes	201
	Determination of stability constants	202
	Trends in stepwise stability constants	202
	Thermodynamic considerations of complex formation: an introduction	202
7.13	Factors affecting the stabilities of complexes containing only monodentate ligands	206
	Ionic size and charge	206
	Hard and soft metal centres and ligands	206

8 Reduction and oxidation

212

8.1	Introduction	212
	Oxidation and reduction	212
	Oxidation states	212
	Stock nomenclature	213

8.2	Standard reduction potentials, E°, and relationships between E°, ΔG° and K	213
	Half-cells and galvanic cells	213
	Defining and using standard reduction potentials, E°	215
	Dependence of reduction potentials on cell conditions	217
8.3	The effect of complex formation or precipitation on M^{z+}/M reduction potentials	221
	Half-cells involving silver halides	221
	Modifying the relative stabilities of different oxidation states of a metal	222
8.4	Disproportionation reactions	225
	Disproportionation	225
	Stabilizing species against disproportionation	225
8.5	Potential diagrams	226
8.6	Frost–Ebsworth diagrams	227
	Frost–Ebsworth diagrams and their relationship to potential diagrams	227
	Interpretation of Frost–Ebsworth diagrams	228
8.7	The relationships between standard reduction potentials and some other quantities	230
	Factors influencing the magnitudes of standard reduction potentials	230
	Values of $\Delta_f G^\circ$ for aqueous ions	231
8.8	Applications of redox reactions to the extraction of elements from their ores	232
	Ellingham diagrams	232

9 Non-aqueous media 236

9.1	Introduction	236
9.2	Relative permittivity	237
9.3	Energetics of ionic salt transfer from water to an organic solvent	238
9.4	Acid–base behaviour in non-aqueous solvents	239
	Strengths of acids and bases	239
	Levelling and differentiating effects	239
	‘Acids’ in acidic solvents	239
	Acids and bases: a solvent-oriented definition	239
9.5	Self-ionizing and non-ionizing non-aqueous solvents	240
9.6	Liquid ammonia	240
	Physical properties	240
	Self-ionization	241
	Reactions in liquid NH_3	241
	Solutions of <i>s</i> -block metals in liquid NH_3	242
	Redox reactions in liquid NH_3	243
9.7	Liquid hydrogen fluoride	244
	Physical properties	244

	Acid-base behaviour in liquid HF	244
	Electrolysis in liquid HF	245
9.8	Sulfuric acid and fluorosulfonic acid	245
	Physical properties of sulfuric acid	245
	Acid-base behaviour in liquid H_2SO_4	246
	Physical properties of fluorosulfonic acid	246
9.9	Superacids	247
9.10	Bromine trifluoride	248
	Physical properties	248
	Behaviour of fluoride salts and molecular fluorides in BrF_3	248
	Reactions in BrF_3	248
9.11	Dinitrogen tetroxide	249
	Physical properties	249
	Reactions in N_2O_4	249
9.12	Ionic liquids	251
	Molten salt solvent systems	251
	Ionic liquids at ambient temperatures	251
	Reactions in and applications of molten salt/ionic liquid media	254
9.13	Supercritical fluids	255
	Properties of supercritical fluids and their uses as solvents	255
	Supercritical fluids as media for inorganic chemistry	257

10 Hydrogen

261

10.1	Hydrogen: the simplest atom	261
10.2	The H^+ and H^- ions	261
	The hydrogen ion (proton)	261
	The hydride ion	262
10.3	Isotopes of hydrogen	262
	Protium and deuterium	262
	Deuterated compounds	263
	Tritium	263
10.4	Dihydrogen	263
	Occurrence	263
	Physical properties	263
	Synthesis and uses	265
	Reactivity	268
10.5	Polar and non-polar E–H bonds	269
10.6	Hydrogen bonding	270
	The hydrogen bond	270
	Trends in boiling points, melting points and enthalpies of vaporization for <i>p</i> -block binary hydrides	273
	Infrared spectroscopy	273
	Solid state structures	273
	Hydrogen bonding in biological systems	276

10.7	Binary hydrides: classification and general properties	278
	Classification	278
	Metallic hydrides	278
	Saline hydrides	279
	Molecular hydrides and complexes derived from them	279
	Covalent hydrides with extended structures	281

11 Group 1: the alkali metals 284

11.1	Introduction	284
11.2	Occurrence, extraction and uses	284
	Occurrence	284
	Extraction	284
	Major uses of the alkali metals and their compounds	285
11.3	Physical properties	286
	General properties	286
	Atomic spectra and flame tests	287
	Radioactive isotopes	289
	NMR active nuclei	289
11.4	The metals	289
	Appearance	289
	Reactivity	289
11.5	Halides	292
11.6	Oxides and hydroxides	293
	Oxides, peroxides, superoxides, suboxides and ozonides	293
	Hydroxides	294
11.7	Salts of oxoacids: carbonates and hydrogencarbonates	294
11.8	Aqueous solution chemistry including macrocyclic complexes	296
	Hydrated ions	296
	Complex ions	297
11.9	Non-aqueous coordination chemistry	301

12 The group 2 metals 305

12.1	Introduction	305
12.2	Occurrence, extraction and uses	305
	Occurrence	305
	Extraction	306
	Major uses of the group 2 metals and their compounds	307
12.3	Physical properties	308
	General properties	308
	Flame tests	309
	Radioactive isotopes	309

12.4	The metals	309
	Appearance	309
	Reactivity	309
12.5	Halides	311
	Beryllium halides	311
	Halides of Mg, Ca, Sr and Ba	312
12.6	Oxides and hydroxides	314
	Oxides and peroxides	314
	Hydroxides	317
12.7	Salts of oxoacids	317
12.8	Complex ions in aqueous solution	318
	Aqua species of beryllium	318
	Aqua species of Mg^{2+} , Ca^{2+} , Sr^{2+} and Ba^{2+}	318
	Complexes with ligands other than water	320
12.9	Complexes with amido or alkoxy ligands	320
12.10	Diagonal relationships between Li and Mg, and between Be and Al	321
	Lithium and magnesium	322
	Beryllium and aluminium	322

13 The group 13 elements

325

13.1	Introduction	325
13.2	Occurrence, extraction and uses	325
	Occurrence	325
	Extraction	325
	Major uses of the group 13 elements and their compounds	327
13.3	Physical properties	329
	Electronic configurations and oxidation states	329
	NMR active nuclei	331
13.4	The elements	331
	Appearance	331
	Structures of the elements	332
	Reactivity	333
13.5	Simple hydrides	334
	Neutral hydrides	334
	The $[MH_4]^-$ ions	339
13.6	Halides and complex halides	340
	Boron halides: BX_3 and B_2X_4	340
	$Al(III)$, $Ga(III)$, $In(III)$ and $Tl(III)$ halides and their complexes	343
	Lower oxidation state Al, Ga, In and Tl halides	345
13.7	Oxides, oxoacids, oxoanions and hydroxides	347
	Boron oxides, oxoacids and oxoanions	347
	Aluminium oxides, oxoacids, oxoanions and hydroxides	349
	Oxides of Ga, In and Tl	352

13.8	Compounds containing nitrogen	352
	Nitrides	352
	Ternary boron nitrides	354
	Molecular species containing B–N or B–P bonds	354
	Molecular species containing group 13 metal–nitrogen bonds	357
13.9	Aluminium to thallium: salts of oxoacids, aqueous solution chemistry and complexes	357
	Aluminium sulfate and alums	357
	Aqua ions	358
	Redox reactions in aqueous solution	358
	Coordination complexes of the M ³⁺ ions	359
13.10	Metal borides	360
13.11	Electron-deficient borane and carbaborane clusters: an introduction	362
14	The group 14 elements	376
14.1	Introduction	376
14.2	Occurrence, extraction and uses	376
	Occurrence	376
	Extraction and manufacture	377
	Uses	377
14.3	Physical properties	380
	Ionization energies and cation formation	380
	Some energetic and bonding considerations	381
	NMR active nuclei	384
	Mössbauer spectroscopy	384
14.4	Allotropes of carbon	384
	Graphite and diamond: structure and properties	384
	Graphite: intercalation compounds	386
	Fullerenes: synthesis and structure	387
	Fullerenes: reactivity	387
	Carbon nanotubes	394
14.5	Structural and chemical properties of silicon, germanium, tin and lead	394
	Structures	394
	Chemical properties	394
14.6	Hydrides	395
	Binary hydrides	396
	Halo hydrides of silicon and germanium	398
14.7	Carbides, silicides, germides, stannides and plumbides	399
	Carbides	399
	Silicides	400
	Zintl ions containing Si, Ge, Sn and Pb	400
14.8	Halides and complex halides	403
	Carbon halides	403
	Silicon halides	405
	Halides of germanium, tin and lead	405

	Oxides, oxoacids and hydroxides	409
14.9	Oxides and oxoacids of carbon	409
	Silica, silicates and aluminosilicates	413
	Oxides, hydroxides and oxoacids of germanium, tin and lead	419
14.10	Siloxanes and polysiloxanes (silicones)	422
14.11	Sulfides	423
14.12	Cyanogen, silicon nitride and tin nitride	426
	Cyanogen and its derivatives	426
	Silicon nitride	428
	Tin(IV) nitride	428
14.13	Aqueous solution chemistry and salts of oxoacids of germanium, tin and lead	428
	15 The group 15 elements	433
15.1	Introduction	433
15.2	Occurrence, extraction and uses	435
	Occurrence	435
	Extraction	435
	Uses	436
15.3	Physical properties	437
	Bonding considerations	439
	NMR active nuclei	441
	Radioactive isotopes	441
15.4	The elements	441
	Nitrogen	441
	Phosphorus	441
	Arsenic, antimony and bismuth	443
15.5	Hydrides	443
	Trihydrides, EH_3 ($\text{E} = \text{N, P, As, Sb}$ and Bi)	443
	Hydrides E_2H_4 ($\text{E} = \text{N, P, As}$)	447
	Chloramine and hydroxylamine	448
	Hydrogen azide and azide salts	449
15.6	Nitrides, phosphides, arsenides, antimonides and bismuthides	451
	Nitrides	451
	Phosphides	451
	Arsenides, antimonides and bismuthides	453
15.7	Halides, oxohalides and complex halides	455
	Nitrogen halides	455
	Oxofluorides and oxochlorides of nitrogen	457
	Phosphorus halides	457
	Phosphoryl trichloride, POCl_3	460
	Arsenic and antimony halides	460
	Bismuth halides	462

15.8	Oxides of nitrogen	463
	Dinitrogen monoxide, N ₂ O	463
	Nitrogen monoxide, NO	464
	Dinitrogen trioxide, N ₂ O ₃	467
	Dinitrogen tetroxide, N ₂ O ₄ , and nitrogen dioxide, NO ₂	467
	Dinitrogen pentaoxide, N ₂ O ₅	468
15.9	Oxoacids of nitrogen	468
	Isomers of H ₂ N ₂ O ₂	468
	Nitrous acid, HNO ₂	468
	Nitric acid, HNO ₃ , and its derivatives	469
15.10	Oxides of phosphorus, arsenic, antimony and bismuth	472
	Oxides of phosphorus	473
	Oxides of arsenic, antimony and bismuth	474
15.11	Oxoacids of phosphorus	474
	Phosphinic acid, H ₃ PO ₂	474
	Phosphonic acid, H ₃ PO ₃	476
	Hypodiphosphoric acid, H ₄ P ₂ O ₆	476
	Phosphoric acid, H ₃ PO ₄ , and its derivatives	476
	Chiral phosphate anions	480
15.12	Oxoacids of arsenic, antimony and bismuth	480
15.13	Phosphazenes	481
15.14	Sulfides and selenides	484
	Sulfides and selenides of phosphorus	484
	Arsenic, antimony and bismuth sulfides	485
15.15	Aqueous solution chemistry and complexes	485
16	The group 16 elements	490
16.1	Introduction	490
16.2	Occurrence, extraction and uses	490
	Occurrence	490
	Extraction	491
	Uses	492
16.3	Physical properties and bonding considerations	492
	NMR active nuclei and isotopes as tracers	495
16.4	The elements	495
	Dioxygen	495
	Ozone	496
	Sulfur: allotropes	498
	Sulfur: reactivity	499
	Selenium and tellurium	500
16.5	Hydrides	501
	Water, H ₂ O	501
	Hydrogen peroxide, H ₂ O ₂	501

	Hydrides H_2E ($E = S, Se, Te$)	504
	Polysulfanes	505
16.6	Metal sulfides, polysulfides, polyselenides and polytellurides	505
	Sulfides	505
	Polysulfides	505
	Polyselenides and polytellurides	507
16.7	Halides, oxohalides and complex halides	508
	Oxygen fluorides	508
	Sulfur fluorides and oxofluorides	509
	Sulfur chlorides and oxochlorides	511
	Halides of selenium and tellurium	512
16.8	Oxides	515
	Oxides of sulfur	515
	Oxides of selenium and tellurium	518
16.9	Oxoacids and their salts	520
	Dithionous acid, $H_2S_2O_4$	520
	Sulfurous and disulfurous acids, H_2SO_3 and $H_2S_2O_5$	520
	Dithionic acid, $H_2S_2O_6$	522
	Sulfuric acid, H_2SO_4	522
	Fluoro- and chlorosulfonic acids, HSO_3F and HSO_3Cl	524
	Polyoxoacids with S–O–S units	524
	Peroxysulfuric acids, $H_2S_2O_8$ and H_2SO_5	524
	Thiosulfuric acid, $H_2S_2O_3$, and polythionates	525
	Oxoacids of selenium and tellurium	525
16.10	Compounds of sulfur and selenium with nitrogen	526
	Sulfur-nitrogen compounds	526
	Tetraselenium tetranitride	528
16.11	Aqueous solution chemistry of sulfur, selenium and tellurium	528

17 The group 17 elements

532

17.1	Introduction	532
	Fluorine, chlorine, bromine and iodine	532
	Astatine	533
17.2	Occurrence, extraction and uses	533
	Occurrence	533
	Extraction	533
	Uses	534
17.3	Physical properties and bonding considerations	537
	NMR active nuclei and isotopes as tracers	538
17.4	The elements	540
	Difluorine	540
	Dichlorine, dibromine and diiodine	540
	Charge transfer complexes	541
	Clathrates	542
17.5	Hydrogen halides	543

17.6	Metal halides: structures and energetics	544
17.7	Interhalogen compounds and polyhalogen ions	545
	Interhalogen compounds	545
	Bonding in $[XY_2]^-$ ions	549
	Polyhalogen cations	549
	Polyhalide anions	550
17.8	Oxides and oxofluorides of chlorine, bromine and iodine	550
	Oxides	550
	Oxofluorides	552
17.9	Oxoacids and their salts	553
	Hypofluorous acid, HOF	553
	Oxoacids of chlorine, bromine and iodine	553
17.10	Aqueous solution chemistry	556

18 The group 18 elements 561

18.1	Introduction	561
18.2	Occurrence, extraction and uses	562
	Occurrence	562
	Extraction	562
	Uses	562
18.3	Physical properties	564
	NMR active nuclei	565
18.4	Compounds of xenon	565
	Fluorides	565
	Chlorides	568
	Oxides	569
	Oxofluorides	569
	Other compounds of xenon	569
18.5	Compounds of argon, krypton and radon	572

19 Organometallic compounds of s- and p-block elements 574

19.1	Introduction	574
19.2	Group 1: alkali metal organometallics	575
19.3	Group 2 organometallics	578
	Beryllium	578
	Magnesium	579
	Calcium, strontium and barium	581
19.4	Group 13	582
	Boron	582

	Aluminium	583
	Gallium, indium and thallium	586
19.5	Group 14	590
	Silicon	591
	Germanium	593
	Tin	595
	Lead	598
	Coparallel and tilted C ₅ -rings in group 14 metallocenes	601
19.6	Group 15	602
	Bonding aspects and E=E bond formation	602
	Arsenic, antimony and bismuth	602
19.7	Group 16	605
	Selenium and tellurium	605

20 d-Block metal chemistry: general considerations

611

20.1	Topic overview	611
20.2	Ground state electronic configurations	611
	d-Block metals versus transition elements	611
	Electronic configurations	612
20.3	Physical properties	612
20.4	The reactivity of the metals	614
20.5	Characteristic properties: a general perspective	614
	Colour	614
	Paramagnetism	615
	Complex formation	615
	Variable oxidation states	618
20.6	Electroneutrality principle	619
20.7	Coordination numbers and geometries	619
	The Kepert model	620
	Coordination numbers in the solid state	621
	Coordination number 2	621
	Coordination number 3	622
	Coordination number 4	622
	Coordination number 5	623
	Coordination number 6	623
	Coordination number 7	625
	Coordination number 8	626
	Coordination number 9	626
	Coordination numbers of 10 and above	627
20.8	Isomerism in d-block metal complexes	627
	Structural isomerism: ionization isomers	627
	Structural isomerism: hydration isomers	628
	Structural isomerism: coordination isomerism	628
	Structural isomerism: linkage isomerism	628
	Stereoisomerism: diastereoisomers	629
	Stereoisomerism: enantiomers	629

21 d-Block metal chemistry: coordination complexes	637
21.1 Introduction	637
High- and low-spin states	637
21.2 Bonding in d-block metal complexes: valence bond theory	638
Hybridization schemes	638
The limitations of VB theory	638
21.3 Crystal field theory	640
The octahedral crystal field	640
Crystal field stabilization energy: high- and low-spin octahedral complexes	642
Jahn–Teller distortions	644
The tetrahedral crystal field	645
The square planar crystal field	646
Other crystal fields	647
Crystal field theory: uses and limitations	647
21.4 Molecular orbital theory: octahedral complexes	648
Complexes with no metal–ligand π -bonding	648
Complexes with metal–ligand π -bonding	649
21.5 Ligand field theory	654
21.6 Describing electrons in multi-electron systems	654
Quantum numbers L and M_L for multi-electron species	654
Quantum numbers S and M_S for multi-electron species	655
Microstates and term symbols	655
The quantum numbers J and M_J	656
Ground states of elements with $Z = 1\text{--}10$	657
The d^2 configuration	659
21.7 Electronic spectra	660
Spectral features	660
Charge transfer absorptions	661
Selection rules	662
Electronic spectra of octahedral and tetrahedral complexes	663
Interpretation of electronic spectra: use of Racah parameters	666
Interpretation of electronic spectra: Tanabe–Sugano diagrams	668
21.8 Evidence for metal–ligand covalent bonding	669
The nephelauxetic effect	669
EPR spectroscopy	670
21.9 Magnetic properties	670
Magnetic susceptibility and the spin-only formula	670
Spin and orbital contributions to the magnetic moment	672
The effects of temperature on μ_{eff}	674
Spin crossover	675
Ferromagnetism, antiferromagnetism and ferrimagnetism	676
21.10 Thermodynamic aspects: ligand field stabilization energies (LFSE)	678
Trends in LFSE	678
Lattice energies and hydration energies of M^{n+} ions	678
Octahedral versus tetrahedral coordination: spinels	678
21.11 Thermodynamic aspects: the Irving–Williams series	680

21.12	Thermodynamic aspects: oxidation states in aqueous solution	680
-------	---	-----

22 *d*-Block metal chemistry: the first row metals 686

22.1	Introduction	686
22.2	Occurrence, extraction and uses	686
22.3	Physical properties: an overview	690
22.4	Group 3: scandium	690
	The metal	690
	Scandium(III)	690
22.5	Group 4: titanium	691
	The metal	691
	Titanium(IV)	692
	Titanium(III)	694
	Low oxidation states	695
22.6	Group 5: vanadium	695
	The metal	695
	Vanadium(V)	695
	Vanadium(IV)	696
	Vanadium(III)	698
	Vanadium(II)	699
22.7	Group 6: chromium	699
	The metal	699
	Chromium(VI)	699
	Chromium(V) and chromium(IV)	701
	Chromium(III)	703
	Chromium(II)	704
	Chromium–chromium multiple bonds	705
22.8	Group 7: manganese	707
	The metal	707
	Manganese(VII)	707
	Manganese(VI)	709
	Manganese(V)	709
	Manganese(IV)	710
	Manganese(III)	711
	Manganese(II)	712
	Manganese(I)	714
22.9	Group 8: iron	714
	The metal	714
	Iron(VI), iron(V) and iron(IV)	714
	Iron(III)	716
	Iron(II)	720
	Iron in low oxidation states	722
22.10	Group 9: cobalt	722
	The metal	722
	Cobalt(IV)	722

Cobalt(III)	722
Cobalt(II)	725
22.11 Group 10: nickel	729
The metal	729
Nickel(IV) and nickel(III)	729
Nickel(II)	730
Nickel(I)	732
22.12 Group 11: copper	732
The metal	732
Copper(IV) and copper(III)	733
Copper(II)	734
Copper(I)	737
22.13 Group 12: zinc	739
The metal	739
Zinc(II)	739
Zinc(I)	740

23 d-Block metal chemistry: the second and third row metals 744

23.1 Introduction	744
23.2 Occurrence, extraction and uses	744
23.3 Physical properties	749
Effects of the lanthanoid contraction	749
Coordination numbers	751
NMR active nuclei	751
23.4 Group 3: yttrium	751
The metal	751
Yttrium(III)	751
23.5 Group 4: zirconium and hafnium	752
The metals	752
Zirconium(IV) and hafnium(IV)	752
Lower oxidation states of zirconium and hafnium	753
Zirconium clusters	754
23.6 Group 5: niobium and tantalum	754
The metals	754
Niobium(V) and tantalum(V)	755
Niobium(IV) and tantalum(IV)	756
Lower oxidation state halides	757
23.7 Group 6: molybdenum and tungsten	759
The metals	759
Molybdenum(VI) and tungsten(VI)	759
Molybdenum(V) and tungsten(V)	763
Molybdenum(IV) and tungsten(IV)	764
Molybdenum(III) and tungsten(III)	765
Molybdenum(II) and tungsten(II)	766

23.8	Group 7: technetium and rhenium	769
	The metals	769
	High oxidation states of technetium and rhenium: M(VII), M(VI) and M(V)	769
	Technetium(IV) and rhenium(IV)	771
	Technetium(III) and rhenium(III)	772
	Technetium(I) and rhenium(I)	773
23.9	Group 8: ruthenium and osmium	774
	The metals	774
	High oxidation states of ruthenium and osmium: M(VIII), M(VII) and M(VI)	774
	Ruthenium(V), (IV) and osmium(V), (IV)	776
	Ruthenium(III) and osmium(III)	779
	Ruthenium(II) and osmium(II)	780
	Mixed-valence ruthenium complexes	782
23.10	Group 9: rhodium and iridium	783
	The metals	783
	High oxidation states of rhodium and iridium: M(VI) and M(V)	783
	Rhodium(IV) and iridium(IV)	784
	Rhodium(III) and iridium(III)	784
	Rhodium(II) and iridium(II)	786
	Rhodium(I) and iridium(I)	787
23.11	Group 10: palladium and platinum	788
	The metals	788
	The highest oxidation states: M(VI) and M(V)	788
	Palladium(IV) and platinum(IV)	788
	Palladium(III), platinum(III) and mixed-valence complexes	789
	Palladium(II) and platinum(II)	790
	Platinum(-II)	793
23.12	Group 11: silver and gold	794
	The metals	794
	Gold(V) and silver(V)	795
	Gold(III) and silver(III)	795
	Gold(II) and silver(II)	796
	Gold(I) and silver(I)	797
	Gold(-I) and silver(-I)	799
23.13	Group 12: cadmium and mercury	800
	The metals	800
	Cadmium(II)	800
	Mercury(II)	801
	Mercury(I)	802
24	Organometallic compounds of d-block elements	806
24.1	Introduction	806
	Hapticity of a ligand	806
24.2	Common types of ligand: bonding and spectroscopy	806
	σ -Bonded alkyl, aryl and related ligands	806
	Carbonyl ligands	807
	Hydride ligands	808
	Phosphine and related ligands	809
	π -Bonded organic ligands	811

Nitrogen monoxide	813
Dinitrogen	814
Dihydrogen	814
24.3 The 18-electron rule	815
24.4 Metal carbonyls: synthesis, physical properties and structure	816
Synthesis and physical properties	817
Structures	819
24.5 The isolobal principle and application of Wade's rules	821
24.6 Total valence electron counts in <i>d</i>-block organometallic clusters	824
Single cage structures	824
Condensed cages	826
Limitations of total valence counting schemes	826
24.7 Types of organometallic reactions	827
Substitution of CO ligands	827
Oxidative addition	828
Alkyl and hydrogen migrations	828
β -Hydrogen elimination	829
α -Hydrogen abstraction	830
Summary	830
24.8 Metal carbonyls: selected reactions	831
24.9 Metal carbonyl hydrides and halides	832
24.10 Alkyl, aryl, alkene and alkyne complexes	833
σ -Bonded alkyl and aryl ligands	833
Alkene ligands	834
Alkyne ligands	836
24.11 Allyl and buta-1,3-diene complexes	837
Allyl and related ligands	837
Buta-1,3-diene and related ligands	839
24.12 Carbene and carbyne complexes	839
24.13 Complexes containing η^5-cyclopentadienyl ligands	841
Ferrocene and other metallocenes	841
$(\eta^5\text{-Cp})_2\text{Fe}_2(\text{CO})_4$ and derivatives	843
24.14 Complexes containing η^6- and η^7-ligands	846
η^6 -Arene ligands	846
Cycloheptatriene and derived ligands	847
24.15 Complexes containing the η^4-cyclobutadiene ligand	849
25 The <i>f</i>-block metals: lanthanoids and actinoids	854
25.1 Introduction	854
25.2 <i>f</i>-Orbitals and oxidation states	855

25.3	Atom and ion sizes	856
	The lanthanoid contraction	856
	Coordination numbers	856
25.4	Spectroscopic and magnetic properties	858
	Electronic spectra and magnetic moments: lanthanoids	858
	Luminescence of lanthanoid complexes	860
	Electronic spectra and magnetic moments: actinoids	860
25.5	Sources of the lanthanoids and actinoids	860
	Occurrence and separation of the lanthanoids	860
	The actinoids	861
25.6	Lanthanoid metals	862
25.7	Inorganic compounds and coordination complexes of the lanthanoids	863
	Halides	863
	Hydroxides and oxides	864
	Complexes of Ln(III)	865
25.8	Organometallic complexes of the lanthanoids	866
	σ -Bonded complexes	866
	Cyclopentadienyl complexes	867
	Bis(arene) derivatives	870
	Complexes containing the η^8 -cyclooctatetraenyl ligand	871
25.9	The actinoid metals	871
25.10	Inorganic compounds and coordination complexes of thorium, uranium and plutonium	872
	Thorium	872
	Uranium	872
	Plutonium	874
25.11	Organometallic complexes of thorium and uranium	875
	σ -Bonded complexes	875
	Cyclopentadienyl derivatives	876
	Complexes containing the η^8 -cyclooctatetraenyl ligand	877

26 d-Block metal complexes: reaction mechanisms

880

26.1	Introduction	880
26.2	Ligand substitutions: some general points	880
	Kinetically inert and labile complexes	880
	Stoichiometric equations say nothing about mechanism	881
	Types of substitution mechanism	882
	Activation parameters	882
26.3	Substitution in square planar complexes	883
	Rate equations, mechanism and the <i>trans</i> -effect	883
	Ligand nucleophilicity	886
26.4	Substitution and racemization in octahedral complexes	888
	Water exchange	888

The Eigen–Wilkins mechanism	889
Stereochemistry of substitution	891
Base-catalysed hydrolysis	893
Isomerization and racemization of octahedral complexes	893

26.5 Electron-transfer processes	895
Inner-sphere mechanism	895
Outer-sphere mechanism	897

27 Catalysis and some industrial processes 905

27.1 Introduction and definitions	905
27.2 Catalysis: introductory concepts	905
Energy profiles for a reaction: catalysed versus non-catalysed	905
Catalytic cycles	906
Choosing a catalyst	908
27.3 Homogeneous catalysis: alkene (olefin) and alkyne metathesis	908
27.4 Homogeneous catalytic reduction of N₂ to NH₃	911
27.5 Homogeneous catalysis: industrial applications	912
Alkene hydrogenation	912
Monsanto acetic acid synthesis	915
Tennessee–Eastman acetic anhydride process	917
Hydroformylation (Oxo-process)	917
Alkene oligomerization	919
27.6 Homogeneous catalyst development	919
Polymer-supported catalysts	920
Biphase catalysis	920
d-Block organometallic clusters as homogeneous catalysts	922
27.7 Heterogeneous catalysis: surfaces and interactions with adsorbates	923
27.8 Heterogeneous catalysis: commercial applications	925
Alkene polymerization: Ziegler–Natta catalysis and metallocene catalysts	925
Fischer–Tropsch carbon chain growth	927
Haber process	928
Production of SO ₃ in the Contact process	929
Catalytic converters	929
Zeolites as catalysts for organic transformations: uses of ZSM-5	930
27.9 Heterogeneous catalysis: organometallic cluster models	931

28 Some aspects of solid state chemistry

938

28.1 Introduction	938
28.2 Defects in solid state lattices	938
Types of defect: stoichiometric and non-stoichiometric compounds	938

	Colour centres (F-centres)	939
	Thermodynamic effects of crystal defects	940
28.3	Electrical conductivity in ionic solids	940
	Sodium and lithium ion conductors	940
	<i>d</i> -Block metal(II) oxides	942
28.4	Superconductivity	943
	Superconductors: early examples and basic theory	943
	High-temperature superconductors	944
	Chevrel phases	945
	Superconducting properties of MgB ₂	946
	Applications of superconductors	946
28.5	Ceramic materials: colour pigments	947
	White pigments (opacifiers)	947
	Adding colour	947
28.6	Chemical vapour deposition (CVD)	947
	High-purity silicon for semiconductors	948
	α -Boron nitride	949
	Silicon nitride and carbide	949
	III–V Semiconductors	949
	Metal deposition	951
	Ceramic coatings	951
	Perovskites and cuprate superconductors	952
28.7	Inorganic fibres	953
	Boron fibres	953
	Carbon fibres	954
	Silicon carbide fibres	955
	Alumina fibres	956
28.8	Carbon nanotubes	957

29 The trace metals of life

962

29.1	Introduction	962
	Amino acids, peptides and proteins: some terminology	962
29.2	Metal storage and transport: Fe, Cu, Zn and V	963
	Iron storage and transport	966
	Metallothioneins: transporting some toxic metals	969
29.3	Dealing with O₂	971
	Haemoglobin and myoglobin	971
	Haemocyanin	973
	Haemerythrin	976
	Cytochromes P-450	977
29.4	Biological redox processes	978
	Blue copper proteins	978
	The mitochondrial electron-transfer chain	979
	Iron-sulfur proteins	981
	Cytochromes	986

29.5	The Zn ²⁺ ion: Nature's Lewis acid	989
	Carbonic anhydrase II	989
	Carboxypeptidase A	991
	Carboxypeptidase G2	991
	Cobalt-for-zinc ion substitution	994

Appendices
