CHAPTER		PAGE
1	GENERAL BACKGROUND REVIEW	1
	1. Maxwell's Equations	1
	2. Definitions of Various Types of Medium	3
	3. Wave Equation	3
	4. Description of Other Material Parameters	6
	5. Boundary Conditions	6
	6. Fresnel Equations	8
	7. Special Examples	11
	8. Separation of Longitudinal and Transverse Coordinates	19
	9. Definition of Various Types of Modes	21
2	FILM-WAVEGUIDES AND ZIG ZAG WAVES	23
	I. An Introduction of Film- Waveguides-Zig Zag Waves	23
	(i) Dual Concept of Ray and Wave Optics	24
	(ii) The A and B Waves	25
	(iii) Electric and Magnetic Field	26

	(iv) Waveguide Modes and the Total Reflection Phenomenon . . .	28
	(v) Field Distribution of a Waveguide Mode	31
	(vi) Effective Thickness of the Waveguide and Power Flow	32
	(vii) Different Waveguide Modes	33
II	Prism-Film Couplers and Zig Zag Waves	35
III	Materials for Film-Waveguides and Their Losses	43
3	ONE-DIMENSIONAL CONFINEMENT	53
	1. Guided Modes of a Slab Waveguide	53
	2. Graphical Solution of the Governing Transcendental Equations	59
	3. Dispersion in Thin Films	66
4	RECTANGULAR DIELECTRIC WAVEGUIDES	73
	I Introduction	73
	II Marcatili's Analysis	75
	III Circular Harmonic Analysis	79
	A. Analysis	79
	B. Computed Results	87
	1. Mode Configurations	87
	2. Propagation Curves	94
	IV COMPARISON OF METHODS	101

5	LOSS MECHANISMS IN DIELECTRIC WAVEGUIDES	105
	I Introduction	105
	II Radiation Loss	106
	III Bend Loss	115
	A. Velocity Approach	115
	B. Model Analysis	119
6	THIN-FILM WAVEGUIDE FABRICATION AND TESTING CONSIDERATIONS	127
	I Introduction	127
	II Dimensional Considerations	128
	III Circuit Fabrication	133
	A. Etched Waveguide Fabrication	138
	1. Masking and Etching	139
	2. Summary of Process	140
	3. Results	141
	B. Ion Bombardment Fabrication	146
	IV Measurement Techniques	151
	A. Determination of Refractive Index and Thickness	151
	1. Stylus Measurements	151
	2. Interferometer	152
	3. Abbe Refractometer	154

CHAPTER	PAGE
4. Abeles Method	154
5. Prism Coupler Method	160
B. Attenuation Measurements	161
V Conclusion	163
7 ELECTRON AND ION BEAM MICROFABRICATION OF INTEGRATED OPTICS ELEMENTS	167
Electron Beam Micropattern Definition and Fabrication	168
Ion Beam Sputtering for Micropattern Processing	173
Scanning Electron Microscopy	176
Results of Beam Microfabrication	177
Conclusions and Summary	188
8 INTRODUCTION TO OPTICAL WAVEGUIDE FIBERS . .	193
I Propagation	194
1.1 Ray Theory	194
1.2 Rays in Step Refractive Index Waveguides	195
1.3 Ray Theory for Gradient Refractive Index Waveguides . . .	197
1.4 Mode Theory	201
1.5 Mode Theory of Step Refractive Index	203
1.6 Mode Theory of Gradient Refractive Index Fibers	206

CHAPTER		PAGE
	II Information Capacity	207
	2.1 Pulse Broadening in Single Mode Fibers	208
	2.2 Pulse Broadening in Multimode Fibers	213
	III Attenuation	217
9	FIBER OPTICS APPLICATIONS	225
	1. Systems Applications	225
	2. Near Term Fiber Optic Data Links	227
	3. Input Coupling Losses	229
10	COUPLED MODE FORMALISM FOR GUIDED WAVE INTERACTIONS	237
	1. Coupled Mode Formalism	237
	2. Coupling Equation	241
	3. Nonlinear Interactions	244
	4. Photoelastic Coupling	249
	5. Coupling by a Surface Corrugation	253
	6. Eigen Modes of a Perturbed Waveguide	259
11	OPTICAL DIRECTIONAL COUPLERS	265
	1. Introduction	265
	2. Coupled Mode Formalism	266
	3. Dual Channel Directional Coupler — Theory and Experiment	269
	4. Derivation of the Coupling Coefficient.	276

5.	Coupling Between Planar Guides	280
6.	Coupling Between Channel Guides	283
7.	Multichannel Directional Coupler — Coupling Coefficient Measurement	288
8.	The Coupling Coefficient Sign	294
9.	Ridged Channel Waveguides and Directional Couplers	296
10.	Directional Coupler — Switch Modulator	302
11.	Light Multiplexing by Directional Coupling	310
12.	Appendix I	314
12	PERIODIC COUPLERS	315
	I Introduction	315
	II Direct Analysis of Beam Coupling	322
	II.1 Spectral Representation of Electromagnetic Waves	322
	II.2 The Prism Coupler	329
	II.3 Fields in the Periodic Medium	338
	II.4 Fields in the Coupler	345
	III Reciprocal Analysis of Periodic Couplers	351
	III.1 The Equation for Coupling Efficiency	351
	III.2 Aperture Fields	355

	IV Design Considerations	361
13	MODULATION	369
	1. Introduction	369
	2. Modulation Analysis	377
	3. Modulator Characteristics	384
	4. Characteristics of Other Modulation Techniques	389
	5. Circuit Aspects of Modulators	396
	6. An Example	401
14	ACOUSTO-OPTICAL INTERACTIONS IN GUIDED WAVE STRUCTURES	411
	I Introduction	411
	II Reviews of Acousto-Optic Interactions	414
	2.1 Photoelastic Effect	414
	2.2 Acousto-Optic Interaction Mechanisms	416
	III Acousto-Optic Interaction in Guided Wave Structure — Analysis	427
	3.1 Acoustic Surface Waves and Optical Guided Waves	427
	3.2 Collinear Interaction of Optical Guided Waves and Acoustic Surface Waves	431
	3.3 Bragg Diffraction of Optical Guided Waves by Acoustic Surface Waves	437

IV	Acousto-Optic Interactions in Guided Wave Structures — Experi- mental Results and Discussions	441
	4.1 Collinear Interaction	441
	4.2 Bragg Deflection of Optical Guided Waves by Acoustic Surface Waves	445
	4.3 Anisotropic Light Diffraction by Acoustic Surface Waves	449
V	Device Parameters for Acousto- Optic Devices	454
	5.1 Efficiency	454
	5.2 Bandwidths and Number of Resolvable Spots	455
	5.3 Speed	463
	5.4 Figures of Merit	463
VI	Device Applications and Conclusions . .	465
15	LASER SOURCE CONSIDERATIONS IN INTEGRATED OPTICS	471
	I Introduction	471
	II Resonant Feedback Structures	472
	A. Dispersion Relations for Periodic Structures	473
	B. Lasers Using Periodic Structures as the Distributed Resonant Feedback Structure (DFB Lasers)	479

C.	Lasers Using Periodic Structures as the Resonant Reflectors in the Fabry-Perot Type of Cavities.	489
D.	Order-of-Magnitude Estimates	492
III.	The Active Medium	492
A.	Dye Lasers	493
B.	Semiconductor Lasers	496
C.	Doped Insulating Solids	498
D.	Gaseous Lasers	501
	Appendix — Derivation of Eqs. (5) and (13)	502
