## Part I. Theory

1.	Stimulus-response compatibility	9
1.1	Introduction	9
1.2	Auditory S-R compatibility sensu J. R. Simon	10
1.3	Simon's explanatory approach	13
1.4	Criticism of the Simon experiments	14
2.	Theoretical problems of spatial S-R compatibility	21
2.1	The spatial stimulus	21
2.2	The spatial response	27
2.3	The S-R correspondence	35
2.4	The metric for S-R compatibility	42
3.	The ecological approach of James J. Gibson	48
3.1	Perception and Action	48
3.2	Acoustics	62
3.3	S-R compatibility	74
4.	Steps towards an ecological consideration of S-R compatibility	84
4.1	An attempt of a new definition of S-R compatibility	84
4.2	Miller's ecoethological approach to behavioral analysis	89
4.3	Alternative metrics for S-R compatibility	98
4.4	Summary	103

## Part II. Research

5.	The application of Miller's strategy	105
5.1	Naturalistic observation	105
5.2	Task description	109
5.3	Experimental manipulation	110
6.	The experiment	112
6.1	Methods	112
6.1.1	Subjects	112
6.1.2	Apparatus	115
6.1.3	Procedure	129
6.2	Results and discussion	138
6.2.1	Sound adjustments	138
6.2.2	Head responses	140
6.2.3	Control handle responses	144
6.2.4	Comparison of head and control handle responses	149
6.2.5	Alternative SRC indicators	158
6.2.5.1	Reactions measured at the foot	159
6.2.5.2	First maximum lateral shift of body mass	163
6.2.5.3	Movement time	170
6.2.5.4	Time of reaching equilibrium	173
6.2.5.5	Second maximum lateral shift of body mass	176
6.2.5.6	The course of responding behavior	183
6.2.5.7	Alternative metrics for S-R compatibility - a short evaluation	186
6.2.6	Errors	188
6.3	Conclusions	192
