List of Figures	x
List of Tables	xiii
Series Editor's Preface	xv
Preface	xvi
Acknowledgements	xix
1 Introduction	1
Some Historical and Cultural Background	2
What is Mind and How Shall We Study It?	9
<b>Part I Elements of Cognition</b>	<b>15</b>
2 Memory	17
<i>The Problem of Retrieval</i>	19
<i>Encoding</i>	20
<i>Reasons for Forgetting</i>	24
<i>The Structure of Memory</i>	30
<i>Implicit and Explicit Memories</i>	40
<i>Conclusions</i>	44
3 Vision	49
<i>The Structure of Visual Information</i>	51
<i>Visual Information Processing: Visual Mechanisms</i>	58
<i>Dynamics of Vision</i>	67
<i>Conclusions</i>	77
4 Language	85
<i>The Structure of Language</i>	86

	<i>Theories on Language Structure</i>	89
	<i>Constructing Speech: The Production of Language</i>	96
	<i>Language Comprehension</i>	102
	<i>Conclusions</i>	105
5	<b>Attention</b>	111
	<i>Selective Attention: Some Early Experiments</i>	112
	<i>Models of Selective Attention</i>	113
	<i>Capacity Models of Attention</i>	118
	<i>Doing Two Things Well</i>	123
	<i>Conclusions</i>	124
6	<b>Skills</b>	129
	<i>Sensory-motor and Cognitive Skills</i>	129
	<i>Declarative and Procedural Knowledge</i>	130
	<i>Practice</i>	131
	<i>Stages of Skill Acquisition</i>	135
	<i>Controlled and Automatic Processing</i>	137
	<i>Feedback</i>	139
	<i>Transfer of Training</i>	142
	<i>Schema Theories of Skill Acquisition</i>	143
	<i>Conclusions</i>	145
	<b>Part II Using Cognition</b>	<b>151</b>
7	<b>Remembering</b>	153
	<i>Combining Knowledge: Scripts, Schemata and Cognitive Maps</i>	154
	<i>Memory and Expertise</i>	158
	<i>Eyewitness Testimony</i>	160
	<i>Autobiographical Memory</i>	162
	<i>Mental Imagery and Memory</i>	166
	<i>Memory Improvement</i>	167
	<i>Conclusions</i>	169
8	<b>Planning and Actions: Successes and Failures</b>	175
	<i>The Planning and Control of Action</i>	176
	<i>Cognition and Emotion</i>	182
	<i>Human Errors</i>	184
	<i>Experimental Studies of Prospective Memory</i>	190
	<i>Conclusions and Prospects</i>	193
9	<b>Reading</b>	200
	<i>The Structure and Units of Speech and Writing</i>	200
	<i>Reading by Ear: Phonic Mediation</i>	202
	<i>Word Recognition by Eye</i>	203
	<i>Models of Word Recognition</i>	207
	<i>Eye Movements during Reading</i>	211
	<i>Reading and Comprehension</i>	212
	<i>An Outline Model of the Reading Process</i>	215

<i>Learning to Read</i>	217
<i>Reading Disorders</i>	220
<i>Conclusions</i>	224
10 <b>Problem Solving and Reasoning</b>	230
<i>When Do We Need to Solve Problems?</i>	230
<i>Where Problems Occur in Problem Solving</i>	233
<i>General Problem-solving Methods</i>	237
<i>Recent Developments in Problem-solving Research</i>	238
<i>Logic and Mental Logic</i>	240
<i>Decision Making and Statistical Reasoning</i>	244
<i>Conclusions</i>	249
<b>Part III Modelling Cognition</b>	<b>257</b>
11 <b>Artificial Intelligence</b>	259
<i>Models, Minds and Thinking Machines</i>	260
<i>History of AI Research</i>	261
<i>Methods and Tools in Contemporary AI</i>	264
<i>AI in Action</i>	268
<i>Conclusions: AI and Cognitive Psychology</i>	284
12 <b>Cognitive Neuropsychology</b>	296
<i>Methods and Techniques in Cognitive Neuropsychology</i>	298
<i>Cognitive Neuropsychology in Action</i>	305
<i>Conclusions: Future Trends and Implications of Cognitive Neuropsychology</i>	317
13 <b>Connectionism</b>	326
<i>Introduction to Connectionism</i>	328
<i>Making Connections</i>	334
<i>Connectionism in Action</i>	343
<i>Strengths and Limits of Connectionism</i>	349
<i>Conclusions</i>	353
References	362
Author Index	391
Subject Index	395

# Figures

---

2.1	Drawings of a 10p coin	21
2.2	The working memory system, showing the central executive, the articulatory loop and the visuo-spatial sketch pad	34
2.3	A schematic representation of concept relatedness in memory	39
2.4	The effect of prior exposure to words on their recognition and on fragment completion after one hour and seven days	42
2.1.1	The effects of depth of processing on latency of responding and accuracy of recognition	46
2.2.1	Per cent correct repetition depending on group, word length and consonant type	48
3.1	A Gibsonian method of speed control	52
3.2	Texture gradients illustrating shape and depth	53
3.3	The horizon ratio: a perceptual invariant	54
3.4	Some Gestalt grouping principles: similarity, proximity and good continuation	56
3.5	'The whole is greater than the sum of the parts.' Overall shape need not depend on the nature of the elements from which it is constructed	57
3.6	Shape can be perceived even when parts are missing	57
3.7	An infinite regress illustrating problems with the picture theory of perception	59
3.8	Some visual illusions and ambiguous figures	60
3.9	The hierarchical representation of a human figure in terms of generalized cones	66

3.10	Held and Hein's experiment showing the active and passive kittens	74
3.11	The moving room	76
3.12	Two difficult to identify pictures	78
3.13	Arrangement for mirror drawing	79
3.1.1	Neuronal responses to head view and gaze direction	81
4.1	A syntactic tree for a simple sentence	90
4.2	A speech spectrogram	102
4.1.1	The learning of focal and non-focal colours by the Dani	107
5.1	Broadbent's model of attention	114
5.2	Kahneman's model of attention	119
6.1	The effects of practice. Improvement in typing skill shows the log-log law	131
6.2	'Closed loop' skills depend on feedback	140
6.1.1	The effect of knowledge on the skill of putting	148
7.1	Variation in autobiographical memory throughout the lifespan	164
7.1.1	Recall of real (R) and simulated (S) scores as a function of knowledge questionnaire	172
8.1	A Test-Operate-Test-Exit (TOTE) unit	177
8.2	A Plan for hammering nails	178
8.3	The Generic Error Modelling System (GEMS)	187
8.1.1	A model of person recognition	197
9.1	A simplified version of the logogen model	209
9.2	The interactive-activation model of word recognition	210
9.3	The basic processes and resources involved in reading	216
9.2.1	The effect of onset analogies on reading performance	228
10.1	Cutting a block of wood into 27 cubes	232
10.2	A monk on a mountain	234
10.3	Water jug problems	234
10.4	The selection task	241
10.5	A more concrete version of the selection task	242
10.6	Estimates of the frequency of deaths	248
11.1	The Turing test	263
11.2	A simple world of geometrical objects	269
11.3	A phrase structure tree	275
11.4	The basic architecture of ACT*	279
11.5	Part of a tangled hierarchy comprising strings, propositions and image	280
11.1.1	The major components of SOAR	291
12.1	The four lobes of the human cerebral cortex seen from the left	299
12.2	A simple model for analysing and producing single words and other lexical items	314
12.1.1	Examples of John's drawings from memory, along with his notes on the salient parts of each object	321
12.1.2	Examples of visual search tasks presented to John	322
13.1	Two ways of naming objects using (a) symbols and (b) links between simple processing units	327
13.2	A connectionist model of memory	332

13.3	A connectionist model consisting of the units A, B, C, D and interconnections	335
13.4	A simple pattern associator	338
13.5	The connection weights and activation values for two dissimilar sets of patterns, and the combined connection weights	340
13.6	The XOR problem	341
13.7	A network, with hidden units, capable of dealing with the XOR problem	342
13.8	An alternative model for solving the XOR problem	355
13.1.1	The Seidenberg and McClelland model of reading	357
13.2.1	A model for learning the past tense of English verbs	359
13.2.2	Percentage correct features of regular and irregular verbs	360

# Tables

---

3.2.1	Effects of visual feedback on balance	84
4.2.1	Percentage of utterances judged complete	109
5.2.1	Performance (reading speeds and comprehension scores) following transfer to untrained material	128
6.2.1	Means of scores on the weightlifting technique	150
7.1.1	Intercorrelations for experiment 1	172
7.2.1	Facts recalled with Standard and Cognitive Interviews	174
8.1	Stimulus Evaluation Checks, and the outcomes for two emotions	183
8.2	A catalogue of errors	188
8.1.1	Number of incidents of each type of misidentification, identified in diarists' records	196
8.2.1	Standardized beta coefficients for regression analyses predicting performance on a range of memory tasks	199
9.2.1	The basic structure of Goswami's experiment 1	227
9.2.2	Mean number of words read correctly	228
10.1	Luchins' water jug problems	237
10.1.1	Percentages of participants achieving complete and partial solutions to the radiation problem following analogical stories compared with no story (control) group	252
10.2.1	Effect of type of problem and when performed on number of participants selecting the correct card combination	254

---

12.2.1	Low frequency spelling and recognition performance of amnesics and controls, and recognition given previous low frequency spelling – p (rec/sp)	324
12.2.2	Contingency table for spelling and recognition	324
13.1	Some famous animals and their characteristics	331
13.1.1	Reversal rates following damage to connectionist model	357
