Chapter 1 PROBLEM SOLVING 1

1-1	Culture, Values, and Problem Solving	1
1-2	Schools of Thought in Problem Solving	2
1-3	Models of Problem-Solving Process	4
1-4	Kinds of Problems	6
1-5	Guides to Problem Solving	7
1-6	Failure to Use Known Information—Difficulty 1	8
1-7	Introduction of Unnecessary Constraints—Difficulty 2	10
1-8	General Precepts as Guides to Problem Solving	14
1-9	Paths to a Solution	19
1-10	Discussing Your Problem	21
1-11	Descartes as Problem Solver	22
1-12	Newton as Problem Solver—Process and Goal	25
1-13	Einstein as Problem Solver—Interaction of Language and Thought	27
1-14	Summary	30
	Exercises	31

Chapter 2 LANGUAGE AND COMMUNICATION 36

2-1	Introduction	36
2-2	The Structure of Language	37
2-3	Communication and Natural Language (Encoding Experience through Language)	40
2-4	Knowledge of the Language and Knowledge of the World	43

2-5	Evolution of Written Language	44
2-6	The Numbers	50
2-7	Gimatria	51
2-8	Language of Statements—Symbolic Logic	53
2-9	Truth Tables	57
2-10	Tautologies and Valid Arguments	61
2-11	Symbols, Operations, and Fundamental Laws of Symbolic Logic	63
2-12	Algebra of Logic and Switching Circuits	64
2-13	Boolean Algebra	66
2-14	Language of Sets—Sets, Subsets, and Operations on Sets	68
2-15	Algebra of Sets	73
2-16	Modern Communication Systems	74
2-17	Use of Redundancy in Communication	75
2-18	Computer Language	81
2-19	Summary	82
	Exercises	86

Chapter 3 COMPUTERS: FUNDAMENTAL CONCEPTS 91

3-1	Introduction	91
3-2	A Simple Computer Model	95
3-3	Basic Components of a Digital Computer	99
3-4	A Program to Add N Numbers	100
3-5	Flow Chart	104
3-6	Memory (Storage) in the “Real” Computer	105
3-7	Input-Output Media	108
3-8	Computer Language: Language of Zeros and Ones	109
3-9	Conversion of Decimal to Binary Numbers	111
3-10	How a Computer Computes	113
3-11	Programming	120
3-12	Use of Computers	127
3-13	Summary	129
	Exercises	131

Chapter 4 PROBABILITY AND THE WILL TO DOUBT 135

4-1	Introduction	135
4-2	Probability and Doubt	136
4-3	Is Mr. X Honest?	138
4-4	Laws of Probability	140

4-5	Bayes' Equation and Relevance of Information	149
4-6	Applications of Bayes' Theorem	151
4-7	More Applications of Bayes' Theorem	156
4-8	Mr. X Revisited	162
4-9	Probability and Credibility	164
4-10	The Concept of Information and Its Measurement	166
4-11	Summary	180
	Exercises	183

Chapter 5 MODELS AND MODELING 192

5-1	Introduction	192
5-2	The Purpose of Models	193
5-3	The Nature of Models	196
5-4	Validation of Models	201
5-5	Classification of Models	203
5-6	Models of History	210
5-7	Models of the Universe	212
5-8	Models of the Atom	217
5-9	A Model of the Brain	220
5-10	Models in Engineering	222
5-11	Models in Physical Science and in Human Affairs	227
5-12	More on Mathematical Models	228
5-13	Summary	238
	Exercises	241

Chapter 6 PROBABILISTIC MODELS 246

6-1	Probabilistic Models—Preliminary Concepts	246
6-2	Populations and Samples	250
6-3	Probability Distribution Models	253
6-4	Normal Distribution Model	256
6-5	Expected Values of Random Variables and Their Aggregates	264
6-6	Central Limit Theorem and Its Application	269
6-7	Random Walk	273
6-8	From Sample to Population—Estimation of Parameters	277
6-9	Testing Hypotheses—Errors of Omission and Commission	285
6-10	Simulation of Probabilistic Models—Monte Carlo Method	293
6-11	Summary	300
	Exercises	304

Chapter 7 DECISION-MAKING MODELS 311

7-1	Introduction	311
7-2	Decision Models	312
7-3	Decision Making Under Certainty	316
7-4	Decision Making Under Risk	317
7-5	Decision Making Under Uncertainty	317
7-6	Utility Theory	322
7-7	Utility Assignments and the Decision Models	335
7-8	Decision Making Under Conflict—Game Theory	337
7-9	Group Decision Making	349
7-10	Summary	350
	Exercises	352

Chapter 8 OPTIMIZATION MODELS

“Selecting the Best Possible” 356

8-1	Introduction	356
8-2	Linear Functions	357
8-3	Linear Programming—Exposure	361
8-4	Linear Programming—An Application to Dental Practice	366
8-5	Linear Programming—Generalization of Method	371
8-6	Nonlinear Programming	382
8-7	Dynamic Programming	386
8-8	Sequential Decisions with Random Outcomes	391
8-9	Sequential Decisions with Normal Distribution Outcomes	397
8-10	Summary	400
	Exercises	403

Chapter 9 DYNAMIC SYSTEMS MODELS 409

9-1	Introduction—An Exposure	409
9-2	Building Blocks in Dynamic System Models	415
9-3	More Recent Models of Dynamic Systems	425
9-4	Homeostasis—Control in Living Organisms	430
9-5	Controllability, and Open vs. Closed Loop Control	434
9-6	Amplitude and Phase in the Response of Dynamic Systems	437
9-7	Characteristics of Feedback Systems	444
9-8	Simulation of Dynamic Systems	455
9-9	A Novel Application in the Making	463
9-10	Summary	466
	Exercises	469

Chapter 10 VALUES AND MODELS OF BEHAVIOR 474

10-1	Introduction	474
10-2	Role of Values in Problem Solving	476
10-3	Value Classification	478
10-4	Value Judgment	480
10-5	Knowledge and Values	483
10-6	A Model of Ethical Behavior	489
10-7	Values of the Present	492
10-8	Values of the Future	493
10-9	Dynamic Change in Values and Value Subscription	494
10-10	Cost-Benefit Assessment of Values	496
10-11	Social Preferences—An Axiomatic Approach	497
10-12	Alternate Procedure for Consensus Determination	501
10-13	Metritzation of Preferences	503
10-14	The Delphi Method	505
10-15	Use of Delphi Method to Develop an Interdisciplinary Course	508
10-16	Consensus on Values and Consensus on What To Do	513
10-17	Summary	514

TOPICS FOR DISCUSSION WITH FOCUS ON VALUES 516
