Preface xi

1 **A history of thinking** 1
Denise Dellarosa
Logical systems of thought 1
Physiological systems of thought 2
Structuralism and thought 3
Behaviorism and thought 6
Gestalt psychology and thought 7
The cognitive revolution 11

2 **Concepts and thought** 19
Edward E. Smith
Introduction 19
Contents of concepts 21
Organization of concepts 29
Combining concepts 35
Remaining issues 41

3 **Induction** 50
Keith J. Holyoak and Richard E. Nisbett
Introduction 50
Induction and knowledge representation 52
Heuristics and constraints 55
Covariation detection 63
Category and concept formation 66
Generalization and specialization 75
Analogy 80
Improving inductive inference 85

4 **Thinking about causality** 92
Miriam W. Schustack
Philosophical background 92
Normative models and human performance 94
Detecting contingency between two variables 96
Causal reasoning with more than one possible cause 104
Scientific reasoning 106
Social reasoning 112
Conclusions 113

5 **Deduction** 116
Lance J. Rips
The nature of deduction 118
The deduction user's manual 122
Empirical issues 133
Conclusions 146

6 **Judgment and decision making** 153
Baruch Fischhoff
Subjective expected utility 155
Clinical judgment 162
Intuitive statistics 167
Prejudices about biases 178

7 **Problem solving** 188
Alan Lesgold
Introduction 188
Solving problems that have clear goals 189
Learning to solve problems 205
Creativity 209

8 **Language and thought** 214
Sam Glucksberg
Introduction 214
Linguistic determinism: thought without language? 217
Effects of language perception on memory, judgment, and thought 221
Linguistic relativity 226

9 **Text comprehension** 242
Richard J. Gerrig
Why study text comprehension? 242
Narrative texts 244
Expository and persuasive texts 259
Conclusions 262

10 **Intelligence** 267
Robert J. Sternberg
The nature of information-processing components 267
The organization of components of human intelligence 267
Understanding human abilities from a cognitive point of view 270
Conclusions 302

11 **Creativity and the quest for mechanism** 309
D. N. Perkins
Creativity as overt conduct 310
Creativity as ineffable 312
Creativity as computation 313
Levels of mechanism 316
Creativity as potencies 318
Creativity as plans 323
Creativity as values 328
Creativity as expertise 330
Why did Beethoven have better ideas? 332

12 **Teaching thinking and problem solving: illustrations and issues** 337
Nancy J. Vye, Victor R. Delclos, M. Susan Burns, and John D. Bransford
Feuerstein's Instrumental Enrichment Program 337
The Philosophy for Children Program 343
Intelligence Applied 347
Similarities among the programs 351
Speculations about the future 362

13. **The development of thinking** 366
Linda B. Smith, Maria Sera, and Bea Gattuso
The phenomena: early partial competence 366
What limits children's thinking? 373
Developmental changes in organization of knowledge 379
Other issues in the study of the development of thought 384
Summary 388

14 **Methodology for laboratory research on thinking: task selection, collection of observations, and data analysis** 392
K. Anders Ericsson and William L. Oliver
Introspection and early theorizing about the mind 392
Toward a scientific analysis of thinking 394
Theoretical approaches to thinking 395
Methodology of thinking research: an overview 397
Laboratory study of thinking: selection of tasks 397

Selecting types of observations to be recorded 401
Analysis and description of observations 411
Concluding remarks 423

15 **A taxonomy of thinking** 429
P. N. Johnson-Laird
Introduction 429
Thinking without a goal 429
Calculation and the "problem space" 431
Nondeterminism 432
Types of search in the problem space 433
Semantic information and deduction 435
Induction 437
The formulation of inductive hypotheses 439
Knowledge as a constraint on inductive thinking 442
Concepts and theories 444
Analogy 445
Creativity 446
Free will, self-reflection, and metacognition 450
Intentionality and self-reflection 453
Conclusions 454
