## **Contents**

Contributors	vii
Fatty Acid Desaturases, Chemistry of	1
Flavin-Mediated Hydroxylation Reactions	8
Flavoenzymes, Chemistry of	17
Fluorescence in Living Systems: Applications in	
Chemical Biology	28
Fluorescence Spectroscopy: Applications in	
Chemical Biology	39
Fluorescence Techniques for Proteins	61
Fluorescence to Study Nucleic Acids	72
Förster Resonance Energy Transfer (FRET) for	
Proteins	80
Forward Chemical Genetics	94
Glycan Biosynthesis in Mammals	112
Glycans: Array-Based Techniques	127
Glycan Synthesis: Key Strategies	139
Glycoconjugates: Structure and Biosynthesis	151
Glycosphingolipids, Chemistry of	164
Glycosylation of Proteins in the Golgi Apparatus	184
Glycosyltransferases, Chemistry of	198
G-Protein-Coupled Receptors: Drug Design	
Strategies	211
Group II Introns	232
Hemes in Biology	240
Hemozoin: A Paradigm for Biominerals in Disease	250
High Throughput Screening (HTS) Techniques:	1:3
Applications in Chemical Biology	260
Histone Modifications: Chemistry and Structural	Berning.
Consequences	275
HIV: Small Molecule Approaches	284
Hormone Signaling	289
Human Hemoglobin: Identification of a Key	
Intermediate	298
Hydration Forces	306
Hypoxic Response and Associated Diseases	314
Informatics for Glycans	329
Inorganic Chemistry in Biology	340
Inositol Phosphates	349
Inositol Phospholipids: Biosynthesis and Biological	
Functions	360
Integrated and Organized Cellular Energetic	
Systems	366

Integrin Signaling	393
Intramembrane Proteolysis	406
Ion Channels	419
Ion Channels: Computational Analysis	437
Ion Channels in Medicine	448
Iron–Sulfur Clusters: Properties and Functions	458
Iron-Sulfur World	469
Isoprostanes	477
Kinases and Dephosphorylases: Chemistry and	
Roles	486
Lantibiotics: Biosynthesis and Modes of Action	494
Large G-Proteins	503
Lead Optimization in Drug Discovery	511
Lipidated Peptide Synthesis	520
Lipid Bilayers: Properties	531
Lipid Domains, Chemistry of	546
Lipid Homeostasis, Chemistry of	551
Lipid Signals: Extracellular	560
Lipidomics	566
Lipids: Chemical Diversity	575
Lipids: Organization and Aggregation	589
Lipids: Phase Transitions	601
Locked Nucleic Acids	616
Lysosomal Disorders	622
Marine Natural Products: Chemical Diversity	633
Mass Spectrometry: Applications in	
Phosphoproteomics	654
Mass Spectrometry of Lipid Analyses	661
Mass Spectrometry to Identify Posttranslational	470
Modifications	670
Mathematical Modelling of Biological Signaling	702
Networks Mechanosensitive Channels	703 712
	/12
Membrane Compartments in Immune Cell Signaling and Trafficking	718
Membrane Fluidity	718 728
	742
Membrane Potentials in Living Systems Membrane Proteins: Properties	742 751
Membrane Protein Structure: Techniques	761
Metabolic Diseases: Biological Mechanisms	773
Wictabolic Diseases. Diological Mechanisms	//3
