A New Preface with Hindsight by John W. Atkinson . . . . .	A
A Truncated Guide for Readers . . . . .	I
<b>PREFACE</b> . . . . .	<b>v</b>
<b>CHAPTER I. INTRODUCTION</b> . . . . .	<b>1</b>
<b>CHAPTER II. TOWARD A THEORY OF MOTIVATION</b> . . . . .	<b>6</b>
2.1 Introduction . . . . .	6
2.2 Difficulties with current motivational theorizing . . . . .	7
2.3 Review of various motivational models . . . . .	12
2.4 The survival model . . . . .	13
2.5 The stimulus intensity model . . . . .	19
2.6 The stimulus pattern model . . . . .	22
2.7 The affective arousal model . . . . .	27
2.8 Why affect as a basis for motives? . . . . .	30
2.9 Behavioral effects of affective arousal . . . . .	32
2.9.1 Distinguishing the effects of affect and motive . . . . .	35
2.9.2 Measuring motives through their effects . . . . .	38
2.10 Antecedent conditions for affective arousal . . . . .	42
2.10.1 Affective arousal is the innate consequence of certain sensory or perceptual events . . . . .	43
2.10.2 Positive affect is the result of smaller discrepancies of a sensory or perceptual event from the adaptation level of the organism; negative affect is the result of larger discrepancies . . . . .	43
2.10.3. Natural adaptation levels for various sensory receptors differ . . . . .	44
2.10.4 A discrepancy between adaptation level and a sensation or event must persist for a finite length of time before it gives rise to an hedonic response . . . . .	46
2.10.5 Discrepancies from adaptation level will give rise to a positive-negative affect function in either direction along a continuum . . . . .	48
2.10.6 Increases and decreases in stimulus intensity can be related to motivation only if adaptation level and learning are taken into account . . . . .	53

2.10.7	Changes in adaptation level, with attendant hedonic changes, may be produced by somatic conditions	54
2.10.8	Changes in adaptation level, with attendant hedonic changes, may be produced by experience	58
2.10.9	Events can differ from expectations on a variety of dimensions	60
2.10.10	Frustration is a source of negative affect	63
2.10.11	The achievement motive develops out of growing expectations	63
2.10.12	In human adults adaptation levels are numerous and complex so that a single event may have several hedonic consequences	66
2.11	The acquisition of motives	67
2.11.1	The acquisition of motives of different strength	68
2.12	Types of affective change and types of motives	74
2.13	Definition of a particular motive	75
2.14	Biological needs and motivation	81
2.15	Rewards and motives	84
2.16	Emotions and motives	87
2.17	Learning and motivation	89
<b>CHAPTER III. AROUSING THE ACHIEVEMENT MOTIVE AND OBTAINING IMAGINATIVE STORIES.</b>		
3.1	Collecting stories	97
3.2	Arousing the achievement motive in various experimental conditions	98
3.2.1	Relaxed condition	99
3.2.2	Neutral condition	100
3.2.3	Achievement-oriented condition	101
3.2.4	Success condition	102
3.2.5	Failure condition	104
3.2.6	Success-failure condition	105
<b>CHAPTER IV. ANALYSIS OF IMAGINATIVE STORIES FOR MOTIVATIONAL CONTENT</b>		
4.1	Relation of scoring categories to the adjustive behavioral sequence	107
4.2	Procedure in scoring a story	108
4.3	Definition of Achievement Imagery (AI)	110

TABLE OF CONTENTS

xiii

4.3.1	Competition with a standard of excellence . . . . .	111
4.3.2	Unique accomplishment . . . . .	113
4.3.3	Long-term involvement . . . . .	113
4.4	Doubtful Achievement Imagery ( <i>TI</i> ) . . . . .	114
4.5	Unrelated Imagery ( <i>UI</i> ) . . . . .	115
4.6	Stories illustrating various types of Achievement Imagery . . . . .	115
4.6.1	Competition with a standard ( <i>AI</i> ) . . . . .	115
4.6.2	Unique accomplishment ( <i>AI</i> ) . . . . .	117
4.6.3	Long-term involvement ( <i>AI</i> ) . . . . .	118
4.6.4	Doubtful Achievement Imagery ( <i>TI</i> ) . . . . .	119
4.6.5	Unrelated Imagery ( <i>UI</i> ) . . . . .	121
4.7	Stated need for achievement ( <i>N</i> ) . . . . .	122
4.7.1	Illustrative stories . . . . .	123
4.8	Instrumental Activity with various outcomes ( <i>I+</i> , <i>I<sup>P</sup></i> , <i>I-</i> ) . . . . .	124
4.8.1	Stories illustrating Successful Instrumental Activity ( <i>I+</i> ) . . . . .	125
4.8.2	Stories illustrating Doubtful Instrumental Activity ( <i>I<sup>P</sup></i> ) . . . . .	126
4.8.3	Stories illustrating Unsuccessful Instrumental Activity ( <i>I-</i> ) . . . . .	127
4.9	Anticipatory Goal States ( <i>Ga+</i> , <i>Ga-</i> ) . . . . .	127
4.9.1	Stories illustrating Positive Anticipatory Goal State ( <i>Ga+</i> ) . . . . .	128
4.9.2	Stories illustrating Negative (or Doubtful) Anticipatory Goal State ( <i>Ga-</i> ) . . . . .	128
4.10	Obstacles or blocks ( <i>Bp</i> , <i>Bw</i> ) . . . . .	130
4.10.1	Stories illustrating Personal Obstacle ( <i>Bp</i> ) . . . . .	131
4.10.2	Stories illustrating Environmental Obstacle ( <i>Bw</i> ) . . . . .	131
4.11	Nurturant Press ( <i>Nup</i> ) . . . . .	132
4.11.1	Stories illustrating Nurturant Press ( <i>Nup</i> ) . . . . .	132
4.12	Affective States ( <i>G+</i> , <i>G-</i> ) . . . . .	133
4.12.1	Stories illustrating Positive Affective State ( <i>G+</i> ) . . . . .	134
4.12.2	Stories illustrating Negative Affective State ( <i>G-</i> ) . . . . .	135
4.13	Achievement Thema ( <i>Ach Th</i> ) . . . . .	136
4.13.1	Stories illustrating Achievement Thema . . . . .	136

CHAPTER V. EFFECTS ON FANTASY OF AROUSING ACHIEVEMENT MOTIVATION 139

5.1	Frequencies of all types of achievement imagery under Relaxed, Neutral, and Achievement-oriented conditions . . . . .	140
-----	---	-----

5.2	Frequencies of selected types of achievement imagery under Relaxed, Success, Failure, and Success-Failure conditions	143
5.3	Types of imagery which do not shift with changes in conditions	145
5.4	Computing the $n$ Achievement score from the record of a single individual	146
5.5	Scoring system C	147
5.6	Refinements in the scoring system	149
5.7	The effects of Success and Failure experiences on imaginative stories	151
5.8	The relative preponderance of positive or negative affect following Achievement-orientation, Success, and Failure	153
5.9	The relative preponderance of environmental or personal obstacles following Achievement-orientation, Success, and Failure	155
5.10	The association of an affective state with the anticipation of its opposite following Success and Failure	156

## CHAPTER VI. GENERAL APPLICABILITY OF THE N ACHIEVEMENT SCORING SYSTEM . . . . . 161

6.1	The effect of achievement arousal on male subjects already tested	161
6.2	The effect of achievement arousal on male high school students in response to pictures containing male and female figures	164
6.3	The effect of achievement arousal on adolescent male Navahos	168
6.4	The effect of achievement arousal on female high school students in response to pictures containing male and female figures	172
6.5	Achievement motivation in women	173
6.6	The relation of age to achievement motivation among eminent scientists	181
6.7	The effect of sophistication on $n$ Achievement score	182

## CHAPTER VII. THE MEASURING INSTRUMENT . 185

7.1	Reliability of scoring	185
7.2	Stability of the $n$ Achievement score	187
7.3	An analysis of the determinants of the $n$ Achievement score	194
7.4	The effect of cues in pictures	197

7.5	The joint effect of cues in pictures and in individuals . . . . .	201
7.6	The joint effect of cues in pictures and in the experimental situation . . . . .	203
7.7	The effect of all three determinants together on <i>n</i> Achievement score . . . . .	204
7.8	Individuals whose score is largely a function of internal cues	207
7.9	Individuals whose score is largely a function of instructional cues . . . . .	209
7.9.1	The effect of instructional cues on the process of writing stories . . . . .	210
7.10	Individuals whose score is largely a function of picture cues	212
7.10.1	Picture cues and motive extensity . . . . .	213
7.11	Other types of achievement motives . . . . .	214

## CHAPTER VIII. RELATION OF *N* ACHIEVEMENT SCORE TO BEHAVIOR . . . . . 218

8.1	Response output . . . . .	220
8.2	Performance and learning . . . . .	227
8.3	College grades . . . . .	237
8.4	Level of aspiration and judgment . . . . .	242
8.5	Perception and thought . . . . .	248
8.5.1	Linguistic usage . . . . .	248
8.5.2	Sentence Completion Test results . . . . .	254
8.5.3	Recognition thresholds . . . . .	257
8.5.4	Rorschach Test results . . . . .	260
8.6	Memory . . . . .	264
8.7	Miscellaneous tests . . . . .	274

## CHAPTER IX. ORIGINS OF ACHIEVEMENT MOTIVATION . . . . . 275

9.1	Perception of parents and achievement motivation . . . . .	276
9.1.1	Child-rearing practices attributed to parents by sons with varying <i>n</i> Achievement . . . . .	276
9.1.2	Traits attributed to parents by sons with varying <i>n</i> Achievement . . . . .	280
9.1.3	Parent-son relations suggested by the sons' views on morality . . . . .	284
9.1.4	Resistance to conformity in subjects with high <i>n</i> Achievement . . . . .	286
9.2	Independent measures of parent behavior and achievement motivation . . . . .	288

9.2.1	Independence training and Achievement Imagery in folk tales . . . . .	289
9.2.2	The sources of achievement motivation in mothers' attitudes toward independence training . . . . .	297
9.2.3	Affective arousal and achievement motivation . . . . .	304
9.2.4	A case study of training in independence . . . . .	306
9.3	Achievement motivation in the context of total personality development . . . . .	311
9.3.1	Clinical ratings and <i>n</i> Achievement score . . . . .	311
9.3.2	Case summaries of students with high and low <i>n</i> Achievement scores . . . . .	313
CHAPTER X.	REVIEW . . . . .	319
APPENDIX I.	Illustrative four-story records from thirty subjects . . . . .	335
APPENDIX II.	Scoring for the illustrative stories . . . . .	371
APPENDIX III.	Pictures and verbal cues used to elicit stories . . . . .	375
BIBLIOGRAPHY OF <i>n</i> ACHIEVEMENT TITLES . . . . .		377
REFERENCES AND AUTHOR INDEX . . . . .		379
SUBJECT INDEX . . . . .		385

## *List of Figures*

### FIGURE

- |     |   |     |
|-----|---|-----|
| 2.1 | Preponderance of "pleasant" or "unpleasant" judgments in relation to the concentration of a sapid solution . . .  | 43  |
| 2.2 | Unequal division points of a straight line chosen as most pleasing . . . . .  | 49  |
| 2.3 | Hedonic tone judgments for discrepancies in spot illumination above and below low and high "Ganzfeld" illuminations . . . . .   | 51  |
| 2.4 | Data plotted from Harriman (1952) showing average amounts of salty water of different concentrations consumed by normal and adrenalectomized rats on a salt-free diet . . . . .   | 55  |
| 3.1 | Two of the pictures used in the standard series for eliciting stories to be scored for <i>n</i> Achievement . . . <i>facing</i>   | 100 |
| 4.1 | Position of the scoring categories in the adjustive behavioral sequence . . . . .   | 109 |
| 5.1 | Diagram showing frequencies of various achievement categories appearing in stories written after different conditions of experimental arousal of <i>n</i> Achievement . . .   | 141 |
| 5.2 | Diagram showing frequencies of selected achievement categories appearing in stories written after different types of experimentally induced success and failure . . . . .   | 144 |
| 7.1 | Graphic presentation of mean <i>n</i> Achievement scores for each picture by subjects whose total score on six other pictures ( <i>F</i> excluded) is above or below the mean of the distribution of total scores . . . . . | 190 |
| 7.2 | The determinants of the <i>n</i> Achievement score obtained from a single story . . . . .   | 196 |
| 7.3 | Mean <i>n</i> Achievement score per story as a function of intensity level of <i>n</i> Achievement in subjects and number of achievement cues in the picture . . . . .  | 202 |
| 7.4 | Mean <i>n</i> Achievement score per story as a function of number of cues in the picture and differences in motivation produced by experimental manipulation of cues in the situation preceding the TAT                     | 204 |

7.5	Graphic representation of joint determination of <i>n</i> Achievement score obtained from a single story by number of achievement cues in (1) pictures, (2) instructions, (3) individuals . . . . .	207
8.1	Mean output of scrambled words per four-minute period for subjects with high and low <i>n</i> Achievement scores . . . . .	231
8.2	Mean recognition times in standard scores for achievement- and security-related words plotted for the upper, middle, and lower thirds of the <i>n</i> Achievement distribution as obtained by combining ranks on the TAT and anagrams measures of <i>n</i> Achievement . . . . .	259
8.3	Mean percentage recall of incompleting tasks by subjects above and below the mean <i>n</i> Achievement score under three types of instructional orientation . . . . .	266
9.1	Cumulative curves showing the proportion of total demands made up to each age level as reported by mothers of children scoring high and low on <i>n</i> Achievement (Achievement orientation) . . . . .	300

## List of Tables

### TABLE

2.1	Motive as a hypothetical construct . . . . .	14
2.2	Motive strength as a hypothetical construct . . . . .	69
5.1	Scoring system C for obtaining an individual's <i>n</i> Achievement score . . . . .	148
5.2	Inter-correlations among <i>n</i> Achievement scores obtained by three different scoring systems . . . . .	149
5.3	Frequencies of all types of Achievement Imagery and mean <i>n</i> Achievement scores for Achievement-oriented, Success, Failure, and Success-Failure conditions . . . . .	152
5.4	Relative preponderance of Positive ( <i>G+</i> ) as compared to Negative Affect ( <i>G-</i> ) in the Achievement-oriented, Success, and Failure conditions . . . . .	154
5.5	Relative preponderance of Environmental ( <i>Bw</i> ) as compared to Personal Obstacles ( <i>Bp</i> ) in the Achievement-oriented, Success, and Failure conditions . . . . .	155
5.6	Relative preponderance of anticipations of success ( <i>Ga+</i> ) as compared to anticipations of failure ( <i>Ga-</i> ) in the Achievement-oriented, Success, and Failure conditions . . . . .	156
5.7	Relative preponderance of <i>G+</i> and <i>Ga-</i> together as compared to <i>G-</i> and <i>Ga+</i> together in the Achievement-oriented, Success, and Failure conditions . . . . .	159
6.1	Frequencies of types of Achievement Imagery appearing in stories written by the same 21 male college students under Neutral and Achievement-oriented conditions . . . . .	164
6.2	Mean <i>n</i> Achievement scores ( <i>C</i> ) obtained from male high school subjects in response to pictures containing male and female characters under Neutral and Achievement-oriented conditions . . . . .	167
6.3	Frequencies of types of Achievement Imagery appearing in stories written by 21 ninth-grade Navaho males under Neutral and Achievement-oriented conditions . . . . .	170
6.4	Mean <i>n</i> Achievement scores ( <i>C</i> ) obtained from female high school subjects in response to pictures containing male	

	and female characters under Neutral and Achievement-oriented conditions . . . . .	172
6.5	Mean $n$ Achievement scores (C) obtained from female college subjects in response to pictures containing male and female characters under Relaxed and Achievement-oriented conditions . . . . .	175
6.6	Mean number of words produced in successive two-minute periods on an anagrams task for female college subjects above and below the mean $n$ Achievement score . . . . .	176
6.7	Mean $n$ Achievement scores (A) for college males and females under Relaxed and Failure conditions (Field data)	177
6.8	Mean $n$ Achievement scores (A) for liked and disliked males and females under Relaxed, "Failure" (rejected), and "Success" (accepted) conditions . . . . .	180
6.9	Mean $n$ Achievement scores (C) for the original criterion groups and following an instruction to deliberately fake a high score . . . . .	184
7.1	Latin square design and analysis of variance for eight-picture measure of $n$ Achievement . . . . .	189
7.2	Comparative Achievement score (C) data on two equivalent three-picture forms . . . . .	192
7.3	Mean $n$ Achievement score per story analyzed according to its determinants . . . . .	206
7.4	Mean number of words per story under Neutral and Achievement-oriented conditions . . . . .	212
8.1	Mean number of words written on an essay by subjects with low, moderate, and high $n$ Achievement scores . . . . .	221
8.2	Mean number of Rorschach responses for subjects with low, moderate, and high $n$ Achievement scores . . . . .	222
8.3	Mean number of tasks completed by subjects with high and low $n$ Achievement scores under three types of orientation toward the tasks . . . . .	224
8.4	Mean number of tasks completed for subjects with low, moderate, and high $n$ Achievement scores under Achievement orientation . . . . .	226
8.5	Product-moment correlations between output on successive two-minute periods of an anagrams test and $n$ Achievement score (A) under Neutral ( $N = 39$ ) and Achievement-oriented conditions ( $N = 30$ ) . . . . .	227
8.6	Mean output of scrambled words per two-minute period for subjects with high and low $n$ Achievement scores (C) . . . . .	230

8.7	<i>F</i> tests of the significance of regression and difference between regressions for high and low <i>n</i> Achievement groups on the scrambled words task . . . . .	232
8.8	Mean quantitative and linguistic test scores on the ACE psychological examination for college freshmen for subjects with high and low <i>n</i> Achievement scores . . . . .	235
8.9	Mean number of addition problems solved per two-minute period for subjects with high and low <i>n</i> Achievement scores . . . . .	236
8.10	Mean self-ratings on achievement motivation for subjects with high and low <i>n</i> Achievement scores . . . . .	243
8.11	Product-moment correlations between <i>n</i> Achievement score, expected examination grades, and grades in course ( <i>N</i> = 38) . . . . .	246
8.12	Mean frequencies of appearance in 400 words of various psycho-grammatical categories for subjects above and below the mean <i>n</i> Achievement score ( <i>C</i> ) . . . . .	250
8.13	Mean number of achievement-related sentence completions for subjects above and below the mean <i>n</i> Achievement score ( <i>C</i> ) . . . . .	255
8.14	Mean frequency of various Rorschach categories for the first response to each blot for subjects with high, moderate, and low <i>n</i> Achievement score ( <i>C</i> ) . . . . .	263
8.15	Analysis of variance for incompleting tasks recalled based on transformed scores . . . . .	267
8.16	Means and mean differences in percentages of incompleting tasks recalled, by orientation and motivational level, with tests of significance based on transformed scores . . . . .	267
8.17	Mean recall scores for completed and incompleting tasks for subjects in high, middle, and low thirds of <i>n</i> Achievement score distribution under three conditions of orientation toward the tasks . . . . .	269
9.1	Correlations between <i>n</i> Achievement score ( <i>C</i> ) and parent behavior variables as rated by sons and by a psychiatrist ( <i>N</i> = 30) . . . . .	279
9.2	Correlations between <i>n</i> Achievement score ( <i>C</i> ) and personality traits attributed to parents by 30 male college students . . . . .	281
9.3	Mean ratings on personality traits attributed to their fathers by high school males with high and low <i>n</i> Achievement scores . . . . .	282

9.4	Guilt felt over "vices" by male college students with high and low <i>n</i> Achievement scores . . . . .	284
9.5	Rank correlations ( <i>tau</i> ) between <i>n</i> Achievement scores obtained from folk tales in eight cultures and ratings of child training variables in those cultures . . . . .	294
9.6	Average number of demands and restrictions required below and above age 8 by mothers of children with high and low <i>n</i> Achievement (Achievement orientation) . . . . .	301
