Contents

Introduction vii

I Absolute invariants for open manifolds and bundles 1
1 Absolute characteristic numbers 4
2 Index theorems for open manifolds 46

II Non–linear Sobolev structures 62
1 Clifford bundles, generalized Dirac operators and associated Sobolev spaces 63
2 Uniform structures of metric spaces 89
3 Completed manifolds of maps 121
4 Uniform structures of manifolds and Clifford bundles .. 124
5 The classification problem, new (co–)homologies and relative characteristic numbers 141

III The heat kernel of generalized Dirac operators 169
1 Invariance properties of the spectrum and the heat kernel 169
2 Duhamel's principle, scattering theory and trace class conditions 180

IV Trace class properties 192
1 Variation of the Clifford connection 192
2 Variation of the Clifford structure 203
3 Additional topological perturbations 223

V Relative index theory 239
1 Relative index theorems, the spectral shift function and the scattering index 239

VI Relative ζ–functions, η–functions, determinants and torsion 252
1 Pairs of asymptotic expansions 252
2 Relative ζ–functions 256
3 Relative determinants and QFT 267
4 Relative analytic torsion 269
5 Relative η–invariants 272
6 Examples and applications 277

VII Scattering theory for manifolds with injectivity radius zero 299
1 Uniform structures defined by decay functions 299
2 The injectivity radius and weighted Sobolev spaces 307
3 Mapping properties of $e^{-t\Delta}$ 317
4 Proof of the trace class property 322
