Contents

| 1 | Int | roduction | 1 | |
|---|---------------------------------------|--|-----|--|
| | 1.1 | Some examples | 1 | |
| | 1.2 | The scope of this book | 14 | |
| | 1.3 | Use of statistical software | 15 | |
| | 1.4 | Further reading | 16 | |
| 2 | Statistical inference for binary data | | | |
| | 2.1 | The binomial distribution | 19 | |
| | 2.2 | Inference about the success probability | 23 | |
| | 2.3 | Comparison of two proportions | 31 | |
| | 2.4 | Comparison of two or more proportions | 38 | |
| | 2.5 | Further reading | 42 | |
| 3 | Mo | 45 | | |
| | 3.1 | Statistical modelling | 45 | |
| | 3.2 | Linear models | 47 | |
| | 3.3 | Methods of estimation | 50 | |
| | 3.4 | Fitting linear models to binomial data | 53 | |
| | 3.5 | Models for binomial response data | 56 | |
| | 3.6 | The linear logistic model | 58 | |
| | 3.7 | Fitting the linear logistic model to binomial data | 59 | |
| | 3.8 | Goodness of fit of a linear logistic model | 65 | |
| | 3.9 | Comparing linear logistic models | 71 | |
| | 3.10 | Linear trend in proportions | 78 | |
| | | Comparing stimulus-response relationships | 81 | |
| | 3.12 | Non-convergence and overfitting | 85 | |
| | 3.13 | Some other goodness of fit statistics | 87 | |
| | 3.14 | Strategy for model selection | 91 | |
| | 3.15 | Predicting a binary response probability | 98 | |
| | 3.16 | Further reading | 101 | |
| 4 | Bioassay and some other applications | | | |
| | 4.1 | The tolerance distribution | 103 | |
| | 4.2 | Estimating an effective dose | 106 | |
| | 4.3 | Relative potency | 111 | |
| | 4.4 | Natural response | 114 | |
| | 4.5 | Non-linear logistic regression models | 118 | |
| | | | | |

| ന | | |
|---|--|--|
| | | |
| | | |

| | 4.6 | Applications of the complementary log-log model | 122 | |
|---|------------------------------|--|-----|--|
| | 4.7 | Further reading | 128 | |
| _ | | | 129 | |
| 5 | Model checking | | | |
| | 5.1 | Definition of residuals | 130 | |
| | 5.2 | Checking the form of the linear predictor | 135 | |
| | 5.3 | Checking the adequacy of the link function | 146 | |
| | 5.4 | Identification of outlying observations | 150 | |
| | 5.5 | Identification of influential observations | 154 | |
| | 5.6 | Checking the assumption of a binomial distribution | 168 | |
| | 5.7 | Model checking for binary data | 169 | |
| | 5.8 | Summary and recommendations | 185 | |
| | 5.9 | Further reading | 193 | |
| 6 | Overdispersion | | | |
| | 6.1 | Potential causes of overdispersion | 195 | |
| | 6.2 | Modelling variability in response probabilities | 199 | |
| | 6.3 | Modelling correlation between binary responses | 201 | |
| | 6.4 | Modelling overdispersed data | 202 | |
| | 6.5 | A model with a constant scale parameter | 206 | |
| | 6.6 | The beta-binomial model | 211 | |
| | 6.7 | Discussion | 212 | |
| | 6.8 | Further reading | 213 | |
| 7 | Мо | delling data from epidemiological studies | 215 | |
| | 7.1 | Basic designs for aetiological studies | 216 | |
| | 7.2 | Measures of association between disease and exposure | 219 | |
| | 7.3 | Confounding and interaction | 223 | |
| | 7.4 | The linear logistic model for data from cohort studies | 226 | |
| | 7.5 | Interpreting the parameters in a linear logistic model | 230 | |
| | 7.6 | The linear logistic model for data from case-control studies | 242 | |
| | 7.7 | Matched case-control studies | 250 | |
| | 7.8 | Further reading | 264 | |
| 8 | Mixed models for binary data | | | |
| | 8.1 | Fixed and random effects | 269 | |
| | 8.2 | Mixed models for binary data | 270 | |
| | 8.3 | Multilevel modelling | 277 | |
| | 8.4 | Mixed models for longitudinal data analysis | 284 | |
| | 8.5 | Mixed models in meta-analysis | 291 | |
| | 8.6 | Modelling overdispersion using mixed models | 293 | |
| | 8.7 | Further reading | 300 | |
| 9 | Exact Methods | | | |
| | 9.1 | Comparison of two proportions using an exact test | 303 | |
| | 9.2 | Exact logistic regression for a single parameter | 307 | |

CONTENTS

| | 9.3 | Exact hypothesis tests | 312 | |
|---------------------------------|-------|--|-----|--|
| | 9.4 | Exact confidence limits for β_k | 317 | |
| | 9.5 | Exact logistic regression for a set of parameters | 318 | |
| | 9.6 | Some examples | 319 | |
| | 9.7 | Discussion | 322 | |
| | 9.8 | Further Reading | 323 | |
| 10 | Son | ne additional topics | 325 | |
| | 10.1 | Ordered categorical data | 325 | |
| | 10.2 | Analysis of proportions and percentages | 329 | |
| | 10.3 | Analysis of rates | 330 | |
| | 10.4 | Analysis of binary time series | 331 | |
| | 10.5 | Modelling errors in the measurement of explanatory variables | 331 | |
| | 10.6 | Multivariate binary data | 332 | |
| | 10.7 | Analysis of binary data from cross-over trials | 333 | |
| | 10.8 | Experimental design | 333 | |
| 11 | Con | nputer software for modelling binary data | 335 | |
| | 11.1 | Statistical packages for modelling binary data | 335 | |
| | | Interpretation of computer output | 339 | |
| | 11.3 | Using packages to perform some non-standard analyses | 341 | |
| | 11.4 | Further reading | 349 | |
| Αį | pen | $\operatorname{dix} \mathbf{A}$ Values of $\operatorname{logit}(p)$ and $\operatorname{probit}(p)$ | 351 | |
| Appendix B Some derivations | | 353 | | |
| | | An algorithm for fitting a GLM to binomial data | 353 | |
| | B.2 | The likelihood function for a matched case-control study | 357 | |
| Appendix C Additional data sets | | 361 | | |
| | | Tonsil size | 361 | |
| | C.2 | Toxicity of rotenone | 361 | |
| | | Food poisoning | 362 | |
| | | Analgesic potency of four compounds | 362 | |
| | | Vasoconstriction of the fingers | 363 | |
| | | Treatment of neuralgia | 363 | |
| | | HIV infection | 365 | |
| | | Aplastic anaemia | 365 | |
| | | Cancer of the cervix | 367 | |
| | C.10 | Endometrial cancer | 367 | |
