PREFACE	xv
1. INTRODUCTION	1
Systematic vs. Spot Investigations	4
Stages in Generalization and Theory Building	8
Subsumption Correlation Analogical thinking	
Hypotheses and theories	
Generality of Experimental-Quantitative Theories	13
Rational vs. empirical formulas	
Theories and Models	20
The Problem of Dynamics in Psychology	22
Theoretical models Physical vs. psychological dimensions	
Validity of experimental approaches The problem of relativity in psychology Scaling and scale factors	
2. THE CONCEPT OF ADAPTATION	36
Connotations of Adaptation	37
Homeostasis	

Sensory Adaptation	41
Adaptation and fatigue	Transient and steady phases of adaptation
Two aspects of adaptation	Appreciation of absolute levels of stimulation
Homeostasis, Equilibrium, and Adaptation-Level Theory	48
Motor Adaptations	50
Adaptation as an Active Process	52
The Concept of Level	55
Behavioral Adaptation: Definition and Assumptions	57
3. SEVEN BASIC CHARACTERISTICS OF BEHAVIOR	64
The Bipolarity of Behavior	65
Categorizing and scaling	Bipolarity of sensory phenomena
Rating scales and bipolarity of behavior	
Pooling, Interaction, and Integration	73
Sensory fusions and interactions	Cross-modality interactions
Spatiotemporal pooling	Cognitive pooling
Interaction and pooling as varieties of adaptation	
Weighting and Distinctiveness	89
Social weighting	
Nonlinear Response Tendencies	94
Variability and Oscillation	102
Rhythmicity of responses	
Optimal Levels and Ranges of Functions: The U-Hypothesis	111
Par and standards of performance	
Output-Input Matching	119
4. PSYCHOPHYSICAL JUDGMENT	125
Quantitative Formulation	127
Weighted Log Mean Definition of AL	129
Absolute and relative methods	Equal weighting for primary and interpolated anchors
Stimulus as standard vs.	

stimulus as member of series Minimally effective and interpolated stimuli Reciprocity of frequency and magnitude Various stimulus distributions Range and density of series stimuli Dispersion of series stimuli Practice and past experience Series effects in discrimination Effects of order on fractionation data

Locus of Neutral Points 164

Factors Affecting Psychophysical Functions 173

Form of psychophysical functions and order of presentation
Frequencies of judgments Resolution of a paradox Determination of the weighting constants by fitting to data

Functions Embodying Adaptation Level 189

X The reformulated Fechner law

Time-Order Effects (TOE) as Manifestations of Level 203

Quantitative Theory of TOE 209

Verification Average value of the TOE

The Comparative Rating Scale (CRS) and the Method of Constant Stimulus Differences 215

Identity of PSE and AL

Quantitative Theory of CRS 219

The power law

X **Assimilation vs. Contrast in Psychophysical Judgments** 225

Some implications of the pooling process

5. PERCEPTION 232

The Concept of Stimulus 233

General considerations Nonstimulating energies Physiological stimuli Subliminal stimuli Field stimulation
Higher-order stimulation Substitute or conditioned stimuli
Aesthetic, emotional, and sexual stimuli Reduced stimulation
Internal states as stimuli Paradoxical, illusory, and hallucinatory stimuli Less well-defined stimuli

Central and Efferent Control of Receptor Activities 246

Phenomenology and Perception	248
The phenomenology of the man in the street Artistic phenomenology Analytical introspection Philosophical (Husserlian) phenomenology Experimental phenomenol- ogy Phenomenology of overt behavior Are phenom- enal properties constitutive?	
Perception of Colors and Spatial Aspects of Vision	260
Colored shadows—a special case of color conversion—The Land colors	
Lightness Constancy	276
Contrast and Assimilation	282
Theoretical considerations The Gelb effect	
Marimont's Model for Complexities of Apparent Brightness	295
Background Influences on Form Perception	297
Influence of Background on Size and Direction	301
Effect of size of frame on perceived length Contextual influences on perceived direction Intermodality interac- tions in space perception Effect of internal norms on rec- ognition of forms	
Anchor, Contrast, and Paradoxical Distance Effects	311
Subliminal Influences on Perception	319
Perception of Time	320
Background effects on the indifferent interval	
Figure and Ground	323
 6. AFFECTIVITY AND MOTIVATION	 328
Affective and sensory processes compared Unidimensional nature of affects Order effects in affective arousal Are affects and emotions data of experience? Basic emotional patterns Perception and affectivity	
Situational Determinants of Basic Needs	342

Affective Equilibrium	346
Beebe-Center's law of affective equilibrium	
Contextual and Background Determinants of Affectivity	349
Influence of general surroundings on affective responses	
Affective responses to object colors on colored backgrounds	
Effects of light sources on ratings of pleasantness	Color of background and affective responses to object colors
Lightness and saturation of object colors	Pleasantness of hues
Affective Interaction and Pooling in Aesthetic Responses	362
The additivity paradox	
Aesthetic Adaptation Levels	368
Humans as predominant affective stimuli	
Motivation, Intervening Variables, and Affectivity	374
Stimulus theories of motive and affect	The McClelland-Clark theory of affect and motivation
Disparity from level in attention and cognition	Importance of minimal stimuli in emotion
7. LEARNING AND PERFORMANCE	391
Learning as process vs. learning as accomplishment	Innate vs. acquired behavior
Level of Aspiration and AL	395
Background and Contextual Factors in Learning	400
Probability Learning	405
Residual effects in probability learning	
Transfer of Learning	410
Transfer as a function of differences in tasks	Influence of context on generalization gradients
Latent learning	
Conditioning, Habituation, and Extinction	431
The Role of Distinctiveness in Learning	435
Reinforcement and Performance	441
The Bevan-Adamson reinforcement model	

8. COGNITION AND THINKING	453
Cognition and Action	455
Perception and Thinking Compared	457
The Complexity of Thought Processes	460
Cognitive Analogues of Focal, Background, and Residual Stimuli	461
Characteristics of predominant ideas Modes of thinking	
Background and Contextual Influences in Cognitive Processes	474
Residual Factors in Thinking	479
Dimensional Attributes of Cognitive Stimuli	481
Role of frequency in levels of meaningfulness Intensity indicators of levels	
The Concept of Level in Cognitive Processes	486
Constancy of intellectual output Adaptation to levels of difficulty	
Temporal Pooling in Cognition and Thinking	494
Emotional Determinants of Cognitive Processes	504
Cognitive Processes as Systems	506
Properties of good cognitive systems The nature and consequences of contradiction	
Abstract Thinking: A Result of Development and Learning	514
Creative Thinking	517
9. PERSONALITY	521
Approaches to Personality	521
Instinct theory Typology The trait approach to personality	
Factor-analysis approaches S-R and environmental theories The eclectic approach	

Personality as Product of Focal, Background, and Residual Stimuli	528
Bodily sources of personality patterns Anchoring of personality in the here and now	
Assessing Personality	535
Projective approaches to personality Situational factors in personality testing Inventory-questionnaire approach to personality Effects of test variables on responses of Ss	
Proijcience	546
Behavior patterns as functions of dimensional variables Personal norms in judgments of physical and behavioral aspects of personality Influence of background on ratings of personality traits Residual factors in use of scales Social suggestion: an instance of adaptation	
Norms and Supernorms in Behavior	572
Nonconforming Individuals	576
The abnormal personality	
10. INTERPERSONAL BEHAVIOR	583
The Nature of Groups	584
Designation of group levels Requirements for an experimental approach to interpersonal relations	
Stimulus and Residual Determiners of Attitudes	595
Sex differences and background influence Social vs. personal norms in expressions of attitudes	
Focal, Background, and Residual Stimuli in Conforming Behavior	608
Studies of Everyday Actions	630
Violation of a prohibition Petition signing The dynamics of volunteering responses An action study involving honesty Implications of the studies for generality of behavior patterns	

Assimilation and Contrast in Judgments of Social, Clinical, and Personality Materials	648
Attitudes as Pooled Effects of Perceptual, Cognitive, and Emotional Components	657
APPENDIX	661
REFERENCES	663
INDEX OF NAMES	711
INDEX OF SUBJECTS	722
