<i>Preface</i>		vii
PART 1. THE LANGUAGE AND APPROACH OF SCIENCE		
<i>Chapter 1</i>	<i>Science and the Scientific Approach</i>	2
	Science and common sense. Four methods of knowing. Science and its functions. The aims of science, scientific explanation, and theory. Scientific research – a definition. The scientific approach.	
<i>Chapter 2</i>	<i>Problems and Hypotheses</i>	16
	Problems. Hypotheses. Problems, values, and definitions. Generality and specificity of problems and hypotheses. The importance of problems and hypotheses. Virtues of problems and hypotheses. The multivariate nature of behavioral research and problems. Concluding remarks—the special power of hypotheses. Study suggestions.	
<i>Chapter 3</i>	<i>Constructs, Variables, and Definitions</i>	28
	Concepts and constructs. Variables. Constitutive and operational definitions of constructs and variables. Types of variables. Continuous and Categorical variables. Constructs, observables, and intervening variables. Study suggestions.	

PART 2. SETS, RELATIONS, AND VARIANCE

<i>Chapter 4</i>	<i>Sets</i> Subsets. Set operations. The universal and empty sets; set negation. Set diagrams. Set operations with more than two sets. Partitions and cross partitions. Defining sets. Levels of discourse. Study suggestions.	48
<i>Chapter 5</i>	<i>Relations</i> Relations as sets of ordered pairs. Determining relations in research. Rules of correspondence and mapping. Functions. Some ways to show relations. Study suggestions.	60
<i>Chapter 6</i>	<i>Variance</i> Calculation of means and variances. Kinds of variance. Components of variance. Covariance. Common factor variance. Study suggestions.	71

PART 3. PROBABILITY, RANDOMNESS, AND SAMPLING

<i>Chapter 7</i>	<i>Probability</i> Definition of probability. Sample space, sample points, and events. Determining probabilities with coins. An experiment with dice. Compound events. Some formal theory. Compound events and their probabilities. Independence, mutual exclusiveness, and exhaustiveness. Conditional probability. Study suggestions.	94
<i>Chapter 8</i>	<i>Sampling and Randomness</i> Sampling, random sampling, and representativeness. Randomness. Randomization. Random assignment. Sample size. Kinds of samples. Study suggestions.	117

PART 4. ANALYSIS, INTERPRETATION, STATISTICS, AND INFERENCE

<i>Chapter 9</i>	<i>Principles of Analysis and Interpretation</i> Frequencies and continuous measures. Rules of categorization. Kinds of statistical analysis. Indices. The interpretation of research data. Study suggestions.	134
------------------	---	-----

Chapter 10	<i>The Analysis of Crossbreaks</i> Data and variable terminology. Crossbreaks: definitions and purpose. Simple crossbreaks and rules for crossbreak construction. Calculation of percentages. Percentage calculation and conditional probability. Statistical significance and the χ^2 test. Levels of statistical significance. Types of crossbreaks and tables. Crossbreaks, relations, ordered pairs, graphing. Addendum: other kinds of crossbreaks. Study suggestions.	157
Chapter 11	<i>Statistics: Purpose, Approach, and Method</i> The basic approach. Definition and purpose of statistics. Binomial statistics. The variance. The law of large numbers. The normal probability curve and the standard deviation. Interpretation of data using the normal probability curve – frequency data. Interpretation of data using the normal probability curve – continuous data.	184
Chapter 12	<i>Testing Hypotheses and the Standard Error</i> Examples: differences between means. Absolute and relative differences. Correlation coefficients. Hypothesis testing: substantive and null hypotheses. The general nature of a standard error. A Monte Carlo demonstration. Statistical inference. Study suggestions.	198
PART 5. ANALYSIS OF VARIANCE		
Chapter 13	<i>Analysis of Variance: Foundations</i> Variance breakdown: a simple example. The t -ratio approach. The analysis of variance approach. An example of a statistically significant difference. Calculation of one-way analysis of variance. A research example. Strength of relations: correlation and the analysis of variance. Components of variance. Study suggestions.	214
Chapter 14	<i>Factorial Analysis of Variance</i> Two research examples. The nature of factorial analysis of variance. A simple fictitious example. Interaction: an example. Factorial analysis of variance with three or more variables. Advantages of factorial	240

	analysis of variance. Factorial analysis of variance and precision. Some research examples. A further word on interaction. Notes of caution. Study suggestions.	
Chapter 15	<i>Analysis of Variance: Correlated Groups</i> Definition of the problem. Extracting variances by subtraction. Research examples. Study suggestions.	269
Chapter 16	<i>Nonparametric Analysis of Variance and Related Statistics</i> Parametric and nonparametric statistics. Nonparametric analysis of variance. Properties of nonparametric methods. Study suggestions.	283
PART 6. DESIGNS OF RESEARCH		
Chapter 17	<i>Research Design: Meaning, Purpose, and Principles</i> Purposes of research design. Research design as variance control. Maximization of experimental variance. Control of extraneous variables. Minimization of error variance. Study suggestion.	300
Chapter 18	<i>Inadequate Designs and Design Criteria</i> Experimental and ex post facto approaches. Symbolism and definitions. Faulty designs. Criteria of research design. Study suggestions.	314
Chapter 19	<i>General Designs of Research</i> Conceptual foundations of research design. The designs. Matching – pro and con. Variants of basic designs. Concluding remarks. Study suggestions.	327
Chapter 20	<i>Research Design and Application: Randomized Groups</i> Simple randomized subjects design. Factorial designs. Evaluation of randomized subjects designs. Study suggestions.	348
Chapter 21	<i>Research Design and Applications: Correlated Groups</i> The general paradigm. Research examples of two-group designs. Multigroup correlated-groups designs. Factorial correlated-groups designs. Analysis of covariance. A procedural description of analysis of covariance. Research design and analysis: concluding remarks. Study suggestions.	360

PART 7. TYPES OF RESEARCH

- Chapter 22** *Ex Post Facto Research* 378
 Basic difference between experimental research and ex post facto research. Self-selection and ex post facto research. Large-scale ex post facto research. Small-scale ex post facto research. Testing alternative or “control” hypotheses. Evaluation of ex post facto research. Conclusions. Addendum: causality and scientific research. Study suggestions.
- Chapter 23** *Laboratory Experiments, Field Experiments, and Field Studies* 395
 A laboratory experiment: Miller studies of the learning of visceral responses. A field experiment: Winter et al.’s study of the classic personal style. A field study: Newcomb’s Bennington College study. Characteristics and criteria of laboratory experiments, field experiments, and field studies. The field experiment. Field studies. Study suggestions.
- Chapter 24** *Survey Research* 410
 Types of surveys. The methodology of survey research. Two studies. Application of survey research to education. Advantages and disadvantages of survey research. Study suggestion.

PART 8. MEASUREMENT

- Chapter 25** *Foundations of Measurement* 426
 Definition of measurement. Measurement and “reality” isomorphism. Properties, constructs, and indicants of objects. Levels of measurement and scaling. Comparisons of scales: practical considerations and statistics.
- Chapter 26** *Reliability* 442
 Definitions of reliability. Theory of reliability. The interpretation of the reliability coefficient. The standard error of the mean and the standard error of measurement. The improvement of reliability. The value of reliability.

Chapter 27	<i>Validity</i> Types of validity. A variance definition of validity: the variance relation of reliability and validity. The validity and reliability of psychological and educational measurement instruments. Study suggestions.	456
PART 9. METHODS OF OBSERVATION AND DATA COLLECTION		
Chapter 28	<i>Interviews and Interview Schedules</i> Interviews and schedules as tools of science. The interview schedule. The value of interviews and interview schedules. Addendum: examples of the interview as a research tool. Study suggestions.	479
Chapter 29	<i>Objective Tests and Scales</i> Objectivity and objective methods of observation. Tests and scales: definitions. Types of objective measures. Types of objective scales and items. Choice and construction of objective measures. Evaluation of objective tests and scales. Study suggestions.	491
Chapter 30	<i>Projective Methods, Available Materials, and Content Analysis</i> The idea of projection. A classification of projective measures. Projective techniques and behavioral research: an assessment. Available materials. Content analysis. Some aspects of method in content analysis. The computer and content analysis. The use of content analysis and available materials in behavioral research. Study suggestions.	514
Chapter 31	<i>Observations of Behavior</i> Problems of observation of behavior. Characteristics of observations. Rating scales. Examples of observation systems. Assessment of behavioral observation. Study suggestions.	536
Chapter 32	<i>Sociometry</i> Sociometry: a definition. Types of sociometric choice. Methods of sociometric analysis. Research applications of sociometry. Sociometric measurement in social scientific and educational research. Study suggestions.	556

- Chapter 33** *The Semantic Differential* 566
 The construction and use of the semantic differential. Format and administration of the semantic differential. Analysis of semantic differential data. Some research uses of the semantic differential. The semantic differential in behavioral research. Study suggestions.
- Chapter 34** *Q Methodology* 582
 Theory; structured and unstructured *Q* sorts; analysis of variance. Factor analysis and factor arrays in *Q* methodology. Strengths and weaknesses of *Q* methodology. *Q* methodology in social scientific and educational research. Study suggestions.
- PART 10. MULTIPLE REGRESSION AND FACTOR ANALYSIS**
- Chapter 35** *Multiple Regression Analysis: Foundations* 603
 Two research examples. Simple regression analysis. Simple regression and analysis of variance. Multiple linear regression. The multiple correlation coefficient. Tests of significance. Interpretation of multiple regression statistics. Statistical significance of the regression and R^2 . Relative contributions to Y of the X 's. Other analytic and interpretative problems. Research examples. Multiple regression analysis and scientific research.
- Chapter 36** *Multiple Regression, Analysis of Variance, and Other Multivariate Methods* 632
 One-way analysis of variance and multiple regression analysis. An example with three groups. Coding and data analysis. Factorial analysis of variance, analysis of covariance, and multiple regression analysis. Canonical and discriminant analysis. The computer and multivariate analysis. Multivariate analysis and behavioral research. Study suggestions.
- Chapter 37** *Factor Analysis* 659
 A hypothetical example. Factor matrices and factor loadings. Some factor theory. Graphical representation of factors and factor loadings. Methods of factor analysis. Second-order factor analysis. Factor scores. Research examples. Factor analysis and scientific research. Study suggestions.

<i>Appendixes</i>	693
Appendix A: The Research Report	694
Appendix B: Historical and Methodological Research	701
Appendix C: The Computer and Behavioral Research	705
Appendix D: Random Numbers and Statistics	712
<i>Author Index</i>	719
<i>Subject Index</i>	723
