# *Contents*

*Glossary of Symbols* xi

*Preface* xiii

## **1 Theories and Markov Models** 1

1.1 *An Example: The All-or-None Model* 1

1.2 *Theories and Models* 6

1.3 *Markov Models* 9

*The State Space / Transitions Between States /  
The Markov Property*

1.4 *Overview of This Book* 16

## **2 Representation of Psychological Processes as Markov Models** 18

2.1 *Markov Models* 19

2.2 *Simple Models of Learning* 24

*The All-or-None Association Model / All-or-None Learning  
on Errors / The Linear Model / The Random-Trials-  
Increment Model*

2.3 *Two-Stage Learning Models* 32

*An Intermediate State / The Long-and-Short Model /  
Multiple Transition Operators*

2.4 *Choice Models* 39

*Single Choices / Sequences of Choices /  
Probability Learning*

2.5 *Random Walks* 46

**3** *Algebraic Analysis of Finite Markov Chains* 51

3.1 *State Probabilities* 52

3.2 *Response Probabilities* 58

3.3 *The Number of Errors* 60

3.4 *Sequential Response Probabilities* 65

3.5 *Item Variability* 68

**4** *Matrix Methods* 77

4.1 *Representation and State Probabilities* 78

4.2 *Transitions Among Sets of States* 82

*State Sets as Responses / Likelihoods of Response  
Strings / The Fundamental Matrix*

4.3 *Distributions of Some Summary Statistics* 92

*The Number of Errors / The Trial of Last Error /  
Latency of Responses*

4.4 *Selection of Items Taking Particular Paths* 98

*Likelihoods Again / The Backward Learning Curve /  
The Backward Latency Curve*

**5** *Estimation of Parameters* 108

5.1 *The Estimation Problem* 109

5.2 *Method-of-Moments Estimators* 113

5.3 *Maximum-Likelihood Estimators* 116

5.4 *Minimum Chi-Square Estimators* 123

5.5 *Finding Numerical Extrema* 126

- 6 Statistical Testing 135**
- 6.1 *Goodness-of-Fit Tests* 137
- 6.2 *Tests of Parameters and Comparison of Models* 141
- 6.3 *Examples of Likelihood-Ratio Testing* 145
- 7 Identification of Models and Parameters 151**
- 7.1 *Unidentifiable Parameters and Equivalent Models* 152
- 7.2 *Vector-Space Representation* 158
- 7.3 *Treatment of Identifiability Problems* 162  
*Equivalence Classes of Models / Parametric Restrictions /  
 Analysis in a Broader Domain*
- 8 Markov Chains Without Absorbing States 171**
- 8.1 *Classification of Markov States and Chains* 172
- 8.2 *State Probabilities* 176  
*Transient States / Ergodic States and Chains /  
 Periodic States*
- 8.3 *Renewal Properties of a Finite Markov Chain* 185  
*Recurrence Probabilities / Recurrence of Transient  
 States / Expected Return Times / Matrix Formulation*
- 9 Markov Chains with Unbounded State Spaces 199**
- 9.1 *Random Walks* 200  
*State Probabilities / Asymptotic Behavior / State Types  
 and Recurrence Probabilities*
- 9.2 *A Queuing Example* 206
- 9.3 *Learning Models* 208
- 9.4 *Generating Functions* 211  
*Properties of Generating Functions / Difference Equations  
 and State Probabilities / The RTI Model / Recurrence  
 Probabilities*

**10 Continuous-Time Markov Processes 226**

10.1 *The Poisson Process* 227

*Definition of a Poisson Process / The State Distribution /  
Waiting Times / Erlang Processes*

10.2 *Birth Processes with State-Dependent Rates* 238

*Yule Processes / Death Processes*

10.3 *Processes with Arrivals and Departures* 246

*A Simple Queue / State Proportional Rates /  
Multiple-Step Transitions*

**A Summary of Probability Theory 254**

A.1 *Fundamental Definitions* 254

A.2 *Random Variables* 256

*Expected Values*

A.3 *Some Discrete Distributions* 261

*The Geometric Distribution / Sums of Geometric Series /  
The Binomial Distribution / The Negative Binomial  
Distribution / The Poisson Distribution*

A.4 *Some Continuous Distributions* 271

*Distributions from Statistics: The Chi-Square  
and the Normal / The Exponential Distribution /  
The Gamma Distribution / The Beta Distribution*

**B Difference Equations 280**

B.1 *Homogeneous Difference Equations* 282

B.2 *Nonhomogeneous Difference Equations* 285

B.3 *Simultaneous Difference Equations* 288

**C Introduction to Linear Algebra 291**

C.1 *Basic Definitions* 292

C.2 *Fundamental Operations* 294

- C.3 *Matrix Inversion* 299
- C.4 *Partitioned Matrices* 303
- C.5 *Vector Spaces, Bases, and Transformations* 304
- C.6 *Eigenvalues and Eigenvectors* 308

**D *Some Concepts from Calculus* 314**

- D.1 *The Derivative* 315

*Finding Extrema of Functions / Finding Derivatives*

- D.2 *Integration* 321

*Integrals as Weighted Combinations / The Relation of the Integral to the Derivative / Calculation of Integrals*

- D.3 *Differential Equations* 327

**E *The Greek Alphabet* 329**

**F *Chi-Square and Normal Distributions* 330**

*Solutions to Problems* 331

*References* 343

*Index* 347
