1	Summary.....	4
2	Zusammenfassung.....	6
3	Introduction	9
3.1	Cerebrovascular diseases and age.....	9
3.2	Cerebrovascular diseases and arterial hypertension	9
3.3	Transient ischemic attack (TIA).....	10
3.4	Lacunar stroke.....	10
3.5	Assessment of retinal vasculature	13
3.6	Vascular changes in arterial hypertension.....	15
3.6.1.	Eutrophic inward vascular remodelling versus vascular hypertrophy	15
3.7	Purpose	18
4	Methods	19
4.1	Study population and study design.....	19
4.2	Inclusion criteria.....	20
4.3	Exclusion criteria.....	21
4.4	Measurement of the arteriole to venule ratio	21
4.4.1	Principles of the method for AVR evaluation	21
4.4.2	Method used in the present study	25
4.5	Measurement of wall to lumen ratio and other retinal arteriolar parameters.....	26
4.5.1	Principle of measurement	26
4.5.2	Software	27
4.5.3	Procedure of measurement	31
4.5.4	Reliability for the assessment of retinal arterial structure	32
4.5.5	Relationship to histological vessel structures	32
4.6	Assessment of carotid intima-media-thickness	34
4.7	Blood pressure measurements.....	35
4.8	Assessment of laboratory parameters	35
4.9	Statistics	35
5	Results	37
5.1	Blood pressure	37

5.2	Evaluation of retinal arteriolar abnormalities.....	38
5.3	Scanning Laser Doppler Flowmetry	42
5.3.1	Diameter of retinal arterioles.....	42
5.3.2	Wall to lumen ratio of retinal arterioles	43
5.3.3	Wall cross sectional area of retinal arterioles	46
5.3.4	Growth index of retinal arterioles' vessel wall:.....	47
5.4	Intima-media-thickness of right common carotid artery:.....	47
5.5	Correlations:	48
5.6	Subgroup analysis	50
5.6.1	Normotensive control group compared to treated versus non-treated hypertensive groups.....	51
5.6.2	Normotensive control group compared to treated versus non-treated cerebrovascular groups.....	52
5.6.3	Hypertensive versus cerebrovascular groups	54
6	Discussion.....	55
6.1	Vascular remodelling in arterial hypertension.....	55
6.1.1.	Roles of apoptosis, inflammation and fibrosis in vascular remodelling	55
6.2	Own results in relation to published papers	59
6.2.1.	Arteriole to venule ratio (AVR)	59
6.2.1.1	AVR and arterial hypertension.....	59
6.2.1.2	AVR and target organ damage.....	62
6.2.2.	Structural alterations of retinal arteries by SLDF.....	63
6.2.2.1	Wall to lumen ratio (WLR) and arterial hypertension	63
6.2.2.2	Wall to lumen ratio (WLR) by SLDF and cerebrovascular damage ...	66
6.2.2.3	Wall to lumen ratio (WLR) and intima-media thickness (IMT)	67
6.2.2.4	Wall to lumen ratio (WLR) and arteriole to venule ratio (AVR).....	69
6.2.2.5	Intima-media-thickness (IMT).....	70
6.3	Limitations of the study	72
6.3.1	Technical limitations of SLDF	72
6.3.2	Patient selection	73
6.3.3	Study design.....	73
6.3.4	Lack of separate absolute values for arteries' and veins' diameters from fundus photographs.....	73
6.3.5	Duration of hypertension and antihypertensive treatment	74
6.3.6	Sample size.....	74
7	Conclusion	75

8	Outlook.....	75
9	References.....	76
10	Abbreviations	87
11	Prior publications.....	88
12	Acknowledgement.....	89
13	Curriculum vitae	90
