

CONTENTS

1. INTRODUCTION	1
2. FACTORS INFLUENCING VIGILANCE PERFORMANCE	5
A. Signal Frequency	5
B. Stimulus Frequency	9
C. Signal-to-Stimulus Ratio	13
D. Signal Magnitude	15
E. Signal Distribution	16
F. Task Complexity	18
G. Knowledge of Results	21
H. Personality	24
I. Sensory Restriction	28
J. Noise	31
K. Location of Critical Signals	33
L. Inter- and Intra-modality Stability of Vigilance Performance	35
M. Intelligence	36
N. Age	36
O. Summary of Additional Findings	37
3. PHYSIOLOGICAL CORRELATES OF VIGILANCE PERFORMANCE	43
A. Electroencephalography	43
B. Galvanic Skin Resistance (GSR)	48
C. Cortical Evoked Potentials	49
D. Other Physiological Indices	50
4. THEORIES OF VIGILANCE PERFORMANCE	53
A. Inhibition Theory	53
B. Reinforcement Theory	55
C. Filter Theory	56
D. Expectancy Theory	57
E. Arousal Theory	59
F. Signal Detection Theory	61
G. IAF Signal Detection Theory	66
5. RELATED THEORIES AND PHENOMENA	69
A. Arousal Theory	69
B. Time Error	77

6. CONCLUSIONS AND DISCUSSION	79
A. Factors Which Influence Vigilance Performance	79
B. The Relationship Between Arousal and Vigilance Performance	80
C. Towards a Theoretical Understanding	83
D. The Need for a New Approach	84
 BIBLIOGRAPHY	 91
