

CONTENTS

About the Author	vii
Series Editor's Introduction	ix
1. Introduction	1
2. Linear Fixed Effects Models: Basics	6
The Two-Period Case	7
Extending the Difference Score Method for the Two-Period Case	10
A First-Difference Method for Three or More Periods per Individual	12
Dummy Variable Method for Two or More Periods per Individual	14
Interactions With Time in the Fixed Effects Method	19
Comparison With Random Effects Models	21
A Hybrid Method	23
Summary	26
3. Fixed Effects Logistic Models	28
The Two-Period Case	28
Three or More Periods	32
Interactions With Time	37
A Hybrid Method	39
Methods for More Than Two Categories on the Response Variable	42
Summary	47
4. Fixed Effects Models for Count Data	49
Poisson Models for Count Data With Two Periods per Individual	49
Poisson Models for Data With More Than Two Periods per Individual	54
Fixed Effects Negative Binomial Models for Count Data	61
A Hybrid Approach	65
Summary	68

5. Fixed Effects Models for Events History Data	70
Cox Regression	71
Cox Regression With Fixed Effects	73
Some Caveats	77
The Hybrid Method for Cox Regression	79
Fixed Effects Event History Methods for Nonrepeated Events	79
Summary	85
6. Structural Equation Models With Fixed Effects	87
Random Effects as a Latent Variable Model	87
Fixed Effects as a Latent Variable Model	91
A Compromise Between Fixed Effects and Random Effects	92
Reciprocal Effects With Lagged Predictors	93
Summary	97
Appendix 1. Stata Programs for Examples in Chapters 2 to 5	99
Appendix 2. Mplus Programs for Examples in Chapter 6	108
