<i>List of figures</i>	ix
<i>List of tables</i>	xi
<i>Abbreviations</i>	xiii
<i>Preface</i>	xv
1 A changing climate for educational research	1
2 Sampling: the basis of all research	9
3 Collecting secondary data: the 'idle' researcher	43
4 Simple analysis: the index wars and other battles	57
5 Surveying the field: questionnaire design	80
6 Simple non-parametric statistics: minding your table manners	109
7 Experimental approaches: a return to the gold standard?	133
8 Elementary parametric statistics: what do they signify?	151
9 Introducing correlations: progress via regression	167
<i>Glossary of selected terms</i>	183
<i>Useful addresses</i>	188
<i>References</i>	189
<i>Index</i>	199

## List of figures

---

2.1	Standard error decreases with size of sample	18
4.1	Frequency of mothers with degrees 1	62
4.2	Frequency of mothers with degrees 2	63
4.3	The 'growing' gap between girls and boys	68
5.1	Draft questionnaire on background to web-based participation	104
9.1	Scatterplot for each local authority: GCSE benchmark 1998 against percentage of children eligible for free school meals	168
9.2	Scatterplot for each school: proportion of students attaining any qualification 1999 against school share of students eligible for free school meals	173

# List of tables

---

4.1	Frequency of mothers with degrees	61
4.2	Scores in a mathematics test	64
4.3	Worked example of segregation index	70
5.1	Ethnic groups 1991 census	100
6.1	Frequency by sex in our achieved sample	109
6.2	Frequency of training in our achieved sample	109
6.3	Cross-tabulation of sex by training	110
6.4	The marginal totals of sex by training	111
6.5	The expected values for trained males	111
6.6	The expected values for sex by training	112
6.7	Observed and expected values for sex by training	112
6.8	Results of a chi-square test of significance	114
6.9	Raw figures from Coldron and Boulton (1991)	119
6.10	Sex of child and level of involvement	119
6.11	Observed and expected values for sex and level of involvement	120
6.12	Chi-square test of sex and level of involvement	120
6.13	Example of two-by-two cross-tabulation	123
6.14	Expected values for Table 6.13	124
6.15	Which non-parametric test should you use?	125
6.16	Car ownership by sex of respondent	127
6.17	Undigested output from a chi-square test	128
6.18	Large table analysis	129
6.19	Recoding a large table	130
6.20	Small expected count	131
6.21	Need for mutually exclusive cases	131
7.1	The simple experimental design	134
7.2	The post-test only experimental design	141
8.1	Scores in a simple experiment	153
8.2	Results of an independent t-test	153

8.3	Scores in a repeated measures design	158
8.4	Results of a related t-test	158
8.5	Mean age in three areas	159
8.6	Results of one-way analysis of variance 1	159
8.7	Mean education episodes in three areas	160
8.8	Results of one-way analysis of variance 2	160
8.9	Tukey's range test	161
8.10	Pass rates by sex of student and experimental group	165
9.1	Correlation between GCSE benchmark and levels of free school meals	169
9.2	Regression analysis, predicting GCSE from FSM	171
9.3	Multiple regression analysis	174
9.4	Coefficients for multiple regression analysis	174
