|--|------------|
| Preface  | vii        |
| <b>A: Introduction: Selectivity</b>  | <b>1</b>   |
| 1. Planning Organic Syntheses: Tactics, Strategy and Control                             | 3          |
| 2. Chemoselectivity  | 7          |
| 3. Regioselectivity: Controlled Aldol Reactions  | 19         |
| 4. Stereoselectivity: Stereoselective Aldol Reactions                                    | 35         |
| 5. Alternative Strategies for Enone Synthesis  | 47         |
| 6. Choosing a Strategy: The Synthesis of Cyclopentenones                                 | 57         |
| <b>B: Making Carbon–Carbon Bonds</b>   | <b>69</b>  |
| 7. The <i>Ortho</i> Strategy for Aromatic Compounds                                      | 71         |
| 8. $\sigma$ -Complexes of Metals   | 91         |
| 9. Controlling the Michael Reaction  | 103        |
| 10. Specific Enol Equivalents  | 115        |
| 11. Extended Enolates  | 123        |
| 12. Allyl Anions   | 135        |
| 13. Homo-enolates  | 147        |
| 14. Acyl Anion Equivalents   | 155        |
| <b>C: Carbon–Carbon Double Bonds</b>   | <b>169</b> |
| 15. Synthesis of Double Bonds of Defined Stereochemistry                                 | 171        |
| 16. Vinyl Anions   | 191        |
| 17. Electrophilic Attack on Alkenes  | 203        |
| 18. Vinyl Cations  | 221        |
| 19. Allyl Alcohols: Allyl Cation Equivalents (and More)                                  | 241        |
| <b>D: Stereochemistry</b>  | <b>257</b> |
| 20. Control of Stereochemistry–Introduction  | 259        |
| 21. Diastereoselectivity   | 273        |
| 22. Resolution   | 287        |
| 23. The Chiral Pool: Asymmetric Synthesis with Natural Products<br>as Starting Materials | 299        |
| 24. Asymmetric Induction I: Reagent-Based Strategy                                       | 313        |
| 25. Asymmetric Induction II: Asymmetric Catalysis: Formation of C–O<br>and C–N Bonds     | 325        |
| 26. Asymmetric Induction III: Asymmetric Catalysis: Formation of C–H<br>and C–C Bonds    | 339        |
| 27. Asymmetric Induction IV: Substrate-Based Strategy                                    | 355        |
| 28. Kinetic Resolution   | 369        |
| 29. Enzymes: Biological Methods in Asymmetric Synthesis                                  | 381        |

|   |            |
|---|------------|
| <b>30. New Chiral Centres from Old: Enantiomerically Pure Compounds and Sophisticated Syntheses</b>                       | <b>395</b> |
| <b>31. Strategy of Asymmetric Synthesis</b>   | <b>409</b> |
| <b>E: Functional Group Strategy</b>   | <b>421</b> |
| <b>32. Functionalisation of Pyridine</b>  | <b>423</b> |
| <b>33. Oxidation of Aromatic Rings and of Enol(ate)s</b>  | <b>437</b> |
| <b>34. Functionality and Pericyclic Reactions: Nitrogen Heterocycles by Cycloadditions and Sigmatropic Rearrangements</b> | <b>451</b> |
| <b>35. Synthesis and Chemistry of Azoles and other Heterocycles with Two or more Heteroatoms</b>                          | <b>463</b> |
| <b>36. Tandem Organic Reactions</b>   | <b>477</b> |
| <b>Index</b>  | <b>487</b> |
