Introduction	1
1 Disruption Management in Flight Gate Scheduling	3
1.1 Introduction	3
1.2 Disruption Management	5
1.2.1 The Objective of Disruption Management	5
1.2.2 The Disruption Management Process	6
1.3 The Recovery Problem	7
1.3.1 Aircraft Recovery Problems	8
1.3.2 The Flight Gate Recovery Problem	10
1.4 Robust Scheduling in Airline	11
1.5 New Models	14
1.6 Summary	27
2 Flight Gate Assignment as a Clique Partitioning Problem	29
2.1 Problem Description	30
2.2 Clique Partitioning Problem	34
2.3 An Ejection Chain Algorithm	39
2.4 Computational Results	44
2.5 Summary	49

3	A First Exact Solution Approach: Dynamic Programming	51
3.1	A Finite, Time Discrete, Dynamic System	53
3.1.1	Period Decision and Objective Function	54
3.1.2	State Variables	55
3.1.3	A Dynamic Problem and its Subproblems	56
3.2	The Principle of Optimality by Bellman	57
3.2.1	Backward Recursion	57
3.2.2	Forward Recursion	58
3.3	Bellman's Algorithm	59
3.4	Numerical Example of Bellman's Algorithm	60
3.5	Computational Results	62
3.6	Summary	63
4	A Second Exact Solution Approach: Branch and Bound	65
4.1	The Search Tree	66
4.2	Upper Bounds	67
4.3	Explicit Branching	70
4.4	Constraint Propagation	73
4.4.1	First Logical Test	73
4.4.2	Second Logical Test	75
4.5	Branch and Bound Algorithm	75
4.6	Numerical Example of the Branch and Bound Algorithm	77
4.7	Computational Results	81
4.8	Summary	84
5	Flight Gate Assignment with Respect to a Reference Schedule	85
5.1	Problem Extensions	85
5.2	A Heuristic Approach for Solving the Multiple Period Problem	89
5.3	Computational Results	91
5.4	Summary	92

6 Stochastic Arrival and Departure Times and Recovery Strategies	93
6.1 Stochastic Arrival and Departure Times	94
6.2 Changes to the Ejection Chain Algorithm	100
6.3 Recovery Strategies	101
6.4 Computational Results	103
6.4.1 Test Data	103
6.4.2 Robust Tests	106
6.4.3 Recovery Tests	112
6.5 Summary	118
Conclusion	121
Bibliography	123
