Contents

Preface  page vii

1 Emerging medical technologies: high stakes science and the need for technology assessment  1

2 Bioengineering and technology assessment  21

3 Health and economic data: a global comparison  31

4 World health and global health challenges  54

5 Healthcare systems: a global comparison  113

6 Healthcare costs vs. time: trends and drivers  135

7 The evolution of technology: scientific method, engineering design, and translational research  149

8 Prevention of infectious disease  186

9 Ethics of clinical research  229

10 Technologies for early detection and prevention of cancer  248

11 Cost effectiveness of screening for disease  305

12 Technologies for treatment of heart disease  320

13 Clinical trial design and sample size calculation  356

14 Technology diffusion  368

15 Regulation of healthcare technologies  376

16 Future of bioengineering and world health  398

Index  405
